BAPI-BACKED Confidence

Most sensor manufacturers will replace their defective products, but only BAPI has the confidence to go beyond the industry standard.

BAPI-BACKED means we stand behind everything we do. We are so confident in the quality of our products that if one fails within the warranty period, we will not only repair or replace it, but we'll provide a product credit to offset your incurred cost.¹

We stand behind our products, and we also stand behind you with:

- Real-time customer service, sales and technical support
- App notes, instructional videos and documentation available 24/7 online

*BAPI also offers a lifetime limited warranty on several temperature units. Please contact your sales representative for details.

- 2.

Our products are built to last, which is why we offer a 5 year warranty across all of our products. Of course, all companies offer a warranty, but we take it a step further. If our product fails due to a manufacturing defect, we will not only repair or replace the unit, but we will also provide a product credit to offset your incurred cost. We will do this regardless of whether or not the product is in the warranty period.

3. 0% Restock Fee on all stock sales names within 30 days.

- All items will be inspected when received. BAPI will consider restocking new and unused items only. If an item is in need of relabeling or repackaging it will be considered used.
- Any restock fee is subject to change based on the Technical Product Support Manager's discretion.

4. Advanced Warranty Replacement

BAPI will consider abandoning defective unit(s) when the following are met:

- Product is still under warranty.
- The product was operating in an environment for which it was designed.
- Product was invoiced for less than \$100.
- Multiple units will be considered for abandonment; not to exceed \$500 per RMA.

The BAPI Difference

Changing the way you think about sensors ...

- Original solutions to common HVAC/R problems
- Driven by customer feedback

BAPI Originals are made up of quality vendors, talented employees, and committed customers. These 3 ingredients combined create industry leading, original solutions.

99.94% Manufacturing Efficiency Rate

Live Support

Manufactured in the USA

On-Site, Multi-Step Testing

Computer Aided Workstations

Marketing Support

We offer a wide range of support both physical and digital to help you and your customers including:

- Catalogs
- Line Cards
- Data Sheets
- Ins/Ops
- Application Notes
- In Person Training
- Webinars
- Online Training
- Videos

These resources are available either through our website or by contacting BAPI.

Sales Support

Our sales & customer service team offer the following:

Order Verification:

To ensure accuracy, we verify each order so you don't have to worry. If we see something off, we'll contact you to make sure you get what you need.

Joint Customer Calls & Visits:

When schedules permit, BAPI salespeople are able to travel to your office for in-office training or hold a webinar for your staff.

Product Samples:

Product samples for customer evaluation are available on request. Contact us for details.

website: www.bapihvac.com

Company Background

BAPI manufactures sensors and solutions for HVAC/R, and we bring to the table many years of combined experience in all aspects of the industry from product development and engineering to manufacturing and sales. In fact, BAPI introduced many of the products and processes that have become industry standards, and we currently hold the patents for many of these products and processes. Dedication to quality throughout the entire manufacturing process has earned our products a reputation for reliability and longevity.

Website Resources - www.bapihvac.com

Online Ordering - The BAPI website features Online Ordering with easy navigation through the product lines and real time information on pricing, orders, shipping and account history.

Application Notes - Have you ever had a ground loop problem or AC power noise in your sensor cables? BAPI has a wealth of information available online to help you solve these and many other common industry problems.

Instruction Sheets, Datasheets & Price Sheets

- Although Installation and Operation Sheets are included in the box of every BAPI product, sometimes these sheets do not make it to the job site. Therefore, BAPI instruction sheets are available online whenever you need them. Printable Datasheets and Price Sheets are also only a click away.

Videos - BAPI has a library of instructional videos available on the website such as how to conduct a wireless building survey with our Field Verifier Kit.

The BAPI-Guard Video

The BAPI Difference

BAPI uses only the highest quality sensing elements and meticulous manufacturing, testing and quality assurance procedures to guarantee that our products perform out of the box and far into the future. Here are a few of the extra steps that we take to protect your reputation and bottom line.

On-Site Multi-Step Testing - Every BAPI product is tested at multiple stages in the manufacturing process using custom designed fixtures and computer aided testing procedures to eliminate the potential for human error and guarantee a quality product.

NIST Traceable Precision Instruments - Product testing and calibration is conducted with precision Instrumentation and state-of-the-art Environmental Chambers, all of which are traceable to National Institute of Standards and Technology (NIST) standards.

Computer Aided Production Stations - Every production station features a large computer monitor and access to a wealth of resources on the BAPI network including product specific build documents, schematics and three dimensional product renderings to assure that each product is built to our engineering specifications.

CE Certified & RoHS Compliant - BAPI holds itself to a higher standard with CE certification on select models of temperature, humidity and pressure sensors. BAPI is also committed to environmentally responsible manufacturing practices and complies with the European Union's RoHS directive, which restricts the use of certain hazardous substances such as lead and mercury.

BAPI-BACKED Confidence - Most sensor manufacturers will replace their defective products, but only BAPI has the confidence to replace our products and provide a product credit to offset your incurred cost.

Blü-Test Suite of Testing Probes

(3 probes on the right are shown with Duct Cone for measuring in a duct.)

Specifications

Power: 3.7V, 2,600 mAh Rechargeable Battery

Charging: Standard USB Charger, 1.5A or greater, Micro-USB cable included

Measurement Range:

Temperature: -40 to 185°F (-40 to 85°C)

%RH: 5 to 95% Non-condensing @ -40 to 158°F (-40 to 70°C)

Differential Pressure: Low Range: -1 to 1" WC (-250 to 250 Pascal) @ -4 to 158°F (-20 to 70°C)
Standard Range: -5 to 5" WC (-1,250 to 1,250 Pascal) @ -4 to 158°F (-20 to 70°C)

Accuracy - Temperature Only Probes: ±0.18°F from -13 to 167°F (±0.1°C from -25 to 75°C)

Accuracy - Temp/Humidity Probes:

Temperature: ±0.36°F @ 77°F (±0.2 at 25°C)

%RH: ±1%RH @ 77°F (25°C) from 10 to 85%RH

Dew Point: ±0.9°F at 77°F (±0.5 at 25°C)

Accuracy - Differential Pressure Probes:

Low Range: ±0.25% of FS Span, -1 to 1" WC (-250 to 250 Pa) @ 77°F (25°C)

Standard Range: ±0.25% of FS Span, -5 to 5" WC (-1,250 to 1,250 Pa) @ 77°F (25°C)

Burst Pressure - Differential Pressure Probes:

Low Range: 415" WC (103 kPa) • Standard Range: 500" WC (124 kPa)

Communication: Bluetooth LE, Class 2 v4.2

Data Logging: 10 second intervals

Environmental Operating Range:

Blü-Test Body: -22 to 158°F (-30 to 70°C)

Temperature Probes: -40 to 185°F (-40 to 85°C)

%RH Probe: 5 to 95% Non-condensing @ -40 to 158°F (-40 to 70°C)

Pressure Probe: -4 to 158°F (-20 to 70°C)

FCC ID: Contains FCC ID 2AA9B04

Agency: CE EN 61326-1:2013 EMC, RoHS, NSF**

The BAPI-Box Crossover Enclosure

The BAPI-Box Crossover features a hinged cover with thumb latch for easy termination. It is available with an optional pierceable knockout plug for the open port. The plug increases the enclosure rating from IP10 to IP44. The BAPI-Box Crossover is available for all of BAPI's non-room temperature and humidity sensors.

BAPI Enclosures Overview

B3

Temperature Sensors

BAPI offers seven enclosure styles for our non-room sensors. These enclosure include the No Box, Junction Box, Weatherproof, BAPI-Box, BAPI-Box 2 and BAPI-Box 4 and BAPI-Box Crossover.

Indoor Enclosures

No Box

The No Box features a plastic mounting bracket with a foam gasket. It does not have an IP or NEMA rating.

Junction Box

The Junction Box is made of galvanized steel with an IP20 and NEMA 1 rating. It includes a plastic mounting bracket and foam gasket.

BAPI-Box 4 Enclosure

The BAPI-Box 4 is made of nylon and plastic and carries an IP10 rating (or an IP44 rating with the Pierceable Knockout Plug installed in the open port). It is half the size of the BAPI-Box 2 with a hinged (but not gasketed) cover.

BAPI-Box Crossover

The BAPI-Box Crossover is made of polycarbonate and carries an IP10 rating (or an IP44 rating with the Pierceable Knockout Plug installed in the open port). It features a hinged cover with thumb latch for easy termination.

No Box

J-Box

BAPI-Box 4

BAPI-Box Crossover

Outdoor Enclosures

BAPI-Box and BAPI-Box 2 Enclosures

The BAPI-Box and BAPI-Box 2 are made of polycarbonate and carry an IP66 and NEMA 4 rating. They remain watertight even after multiple openings of the hinged cover.

Weatherproof Enclosure ("Bell Box")

The Weatherproof Enclosure is made of cast aluminum and carries a NEMA 3R and IP24 rating.

Note: For more information about NEMA and IEC enclosure ratings see BAPI's application notes [NEMA Enclosure Ratings](#) and [IEC Enclosure Ratings](#).

Features & Options

- BAPI-Stat "Quantum" Enclosure Style with Higher Contrast Display for Improved Clarity at Greater Distances
- Pushbutton or Slider Setpoint Adjustment
- Large Display with Multiple Indicators and Icons
- Optional Fan Speed and Mode Control

The BAPI-Stat "Quantum" room temperature sensors feature a modern enclosure style with pushbutton or slider setpoint adjustment and override. The LCD can display both temperature as well as room occupancy status. The display has been upgraded for higher contrast, providing improved clarity at greater distances.

The unit is available with optional occupancy override, comm jack and fan speed and mode control for applications with fan coils, heat pumps or unit ventilators. A 60mm mounting base is also available to fit European style junction boxes.

**BAPI-Stat
"Quantum"
Sensors**

(Bottom image shown with optional 60mm mounting base)

Specifications

Power for 24 VDC Power Units (default):

0 to 5 VDC Setpoint or Resistive Setpoint:
9 to 40 VDC (24 VDC nominal)

0 to 10 VDC Setpoint or Resistive Setpoint:
15 to 40 VDC (24 VDC nominal)

Any Allowed Setpoint: 15 to 28 VAC (24 VAC nominal)

Note: AC power requires a separate pair of shielded wires.

Power for Optional 5 VDC Power Units:

0 to 5 VDC Setpoint or Resistive Setpoint:
5VDC, +/-1% nominal, Input regulation affects accuracy

Power Consumption: 13 mA max DC; .32 VA max AC

Sensing Element:

Thermistor or RTD (See Sensors Sect. for Specs.)

Wiring: 2 to 6 pair of 16 to 22AWG*

Mounting:

Standard 2"x4" junction box, European junction box or drywall mount (screws provided)

Environmental Operation Range:

Temperature: 32 to 122 °F (0 to 50 °C)

Humidity: 0 to 95%, non-condensing

Enclosure Material: ABS Plastic, UL94 V-0

Agency: CE EN 61326-1:2013 EMC, RoHS

*BAPI recommends that you do not run wiring for the Room Units in the same conduit as line voltage wiring or with wiring used to supply highly inductive loads such as motors, generators and coils. Also, these units are not designed for line voltage applications.

Features & Options

- BAPI-Stat "Quantum Prime" Enclosure Style with Higher Contrast Display for Improved Clarity at Greater Distances
- Membrane Keypad for Wipedown Cleaning
- Temperature and Humidity Setpoint Adjustment

The BAPI-Stat "Quantum Prime" is designed for operating rooms, clean rooms and elder care facilities. It features a large display and membrane keypad for wipedown cleaning. It is available with temperature and humidity measurement, temperature and humidity setpoint and occupant override.

The unit includes a number of field adjustments including °F or °C display, temperature and humidity offset and setpoint lockout. The display can also be set to show a large temperature and small %RH reading or a large %RH and a small temperature reading when 4 buttons are present.

This unit can be configured with up to four transmitted variables. Contact your BAPI representative for details.

A 60mm mounting base is also available to fit European style junction boxes.

Ordering Information

The BAPI-Stat “Quantum Prime” Wipedown Sensor is a powerful unit with many options. Please call your BAPI representative for ordering. We will provide a quote and keep it on record for future orders.

Specifications

Power Supply:

10 to 40 VDC (15 to 24 VDC Recommended) for 4 to 20 mA or 0 to 5 VDC Outputs

15 to 40 VDC (15 to 24 VDC Recommended) for 0 to 10 VDC Outputs

12 to 28 VAC (Requires a separate pair of shielded wires) for 0 to 5 VDC Outputs

15 to 28 VAC (Requires a separate pair of shielded wires) for 0 to 10VDC Outputs

Power Consumption:

100 mA max DC 4 to 20 mA Output (<30mA typical)

75 mA max DC 0 to 5 or 0 to 10 VDC Outputs (6mA typical)

1.9 VA max AC..... 0 to 5 or 0 to 10 VDC Outputs (0.2VA typical)

Outputs: 4 active outputs plus 1 passive temp sensor

Volts..... 0 to 5 VDC or 0 to 10VDC, Impedance >10K Ω

Current..... 4 to 20 mA, Impedance <500 Ω @ 24 VDC

Resistance..... Setpoint, 5 VDC @ 5 mA max

Relay Contact..... N.O., 500 mA @ 24 VDC max

Temp. Sensor Passive RTD or Thermistor

Inputs:

External Override..... 5 VDC or 24 VDC/VAC

External Sensor..... 10K-2 Thermistor purchased separately.

Sensing Elements for Active Outputs and Display:

Temperature 10K-2 Thermistor

Humidity..... Capacitive Polymer, $\pm 2\%$ RH

Mounting: Standard 2"x4" junction box, European junction box or drywall mount (screws provided)

Environmental Ambient:

Temperature 32 to 122°F (0 to 50°C)

Humidity..... 0 to 95%, non-condensing

Storage 32 to 185°F (0 to 85°C)

Wiring: 2 to 6 pair of 16 to 22 AWG*

Enclosure Material: ABS Plastic, UL94 V-0

Agency: CE EN 61326-1:2013 EMC, RoHS

*BAPI recommends that you do not run wiring for room units in the same conduit as line voltage wiring or with wiring used to supply highly inductive loads such as motors, generators and coils.

Features & Options

- New BAPI-Stat "Quantum Slim" Enclosure Style
- White or Black Color Option
- Wide Selection of Temperature Sensing Elements
- Limited Lifetime Warranty

The BAPI-Stat "Quantum Slim" Temperature Room Sensor is designed for applications where a temperature output is required with a sleek, low profile room enclosure.

The unit is available with thermistor and RTD elements. Ideal for locations where aesthetics are as important as the temperature measurement.

Features & Options

- Patented Enclosure Style with Large Display
- Robust Tactile Pushbuttons
- Setpoint Adjust (Slider or Pushbutton)
- Optional Override, Fan Speed & Mode Control
- Optional Communication Jack and Test & Balance

The patented BAPI-Stat 4 Style Enclosure features a large LCD with all the visual indicators on the display itself. It provides local indication of Temperature and Setpoint with Setpoint Adjust and Override.

It also has optional Fan Speed and Mode Control for applications with Fan Coils, Heat Pumps or Unit Ventilators. The Setpoint is available as a slidepot or as pushbuttons and is displayed on the LCD for a short time after an adjustment.

The Override is a momentary signal that can be configured in parallel with the sensor or setpoint, or as a separate output or a latching switch. An optional 3.5mm (1/8"), RJ11 or RJ22 Communication Jack can be mounted in the base to provide direct access to the network.

BAPI-Stat 4
Units

Specifications

Power for 24VDC Power Units:

0 to 5 VDC Setpoint or Resistive Setpoint 9 to 40 VDC (24 VDC nominal)
 0 to 10 VDC Setpoint or Resistive Setpoint ... 15 to 40 VDC (24 VDC nominal)
 Any Allowed Setpoint..... 15 to 28 VAC (24 VAC nominal)

Note: AC power requires a separate pair of shielded wires.

Power Consumption: 7 mA max DC; .17 VA max AC

Sensing Element:

Thermistor or RTD (See Sensors Sect. for Specs.)

Wiring: 2 to 4 pair of 16 to 22AWG*

Communication Jack:

Optional 3.5mm (1/8") Phono Jack

Mounting:

Features & Options

- Delta Style Enclosure with Display
- Optional Slider or Pushbutton Setpoint Adjustment
- Optional Occupancy Override with LED Indication
- Optional Communication Jack
- Wide Selection of Temperature Sensing Elements

The RμP and RμPS units come in the popular Delta Style Enclosure with LCD. They provides local indication of temperature with pushbutton or slider Setpoint Adjustment and optional Override with LED and Communications Jack.

This unit is also available with Fan Speed and Mode Control for applications with Fan Coils, Heat Pumps or Unit Ventilators.

RμP (above)
and RμPS
(right)

Specifications

Power RμP:

7 to 35 VDC (15 to 24 VDC recommended)
12 to 30 VAC (requires a separate pair of shielded wires)

Power RμPS:

9 to 40 VDC (15 to 24 VDC recommended)
15 to 28 VAC (Requires a separate pair of shielded wires)

Power Consumption:

10 mA max. DC, .2 VA maximum AC

Sensing Element:

Thermistor or RTD (See Sensors Sect. for Specs.)

Mounting:

Standard 2"x4" J-box or drywall mount (screws provided)

Environmental Operation Range:

Temp: 32 to 122 °F (0 to 50 °C)
Humidity: 0 to 95%, non-condensing

Enclosure Material & Rating:

ABS Plastic, UL94 HB

*BAPI recommends that you do not run wiring for the Room Units in the same conduit as line voltage wiring or with wiring used to supply highly inductive loads such as motors, generators and coils.

Associated Products

The BAPI-Guard

Prevents tampering, physical damage and unauthorized adjustment of thermostats. Available in two sizes to fit most thermostats.

VC350A "EZ" - Voltage Converter

BAPI recommends using DC power on room units for a more stable reading. Our 350mA "EZ" unit is a perfect way to convert 24 VAC to 5, 12, 15 or 24 VDC.

Features & Options

- Temperature and Humidity Setpoint Adjustment
- BAPI-Stat 4 Enclosure Style
- Large Easy-to-Read Display, °F or °C Indication
- Fully Compensated 2% RH Sensor
- Optional Override, Resistive Temperature Sensor and Communication Jack

The BAPI-Stat 4 "X-Combo" Room Unit features local indication of both temperature and humidity with optional Temperature Setpoint, Humidity Setpoint and Local Occupancy Override.

The optional LCD shows room temperature in °C or °F and room humidity in %RH. In addition, the unit has adjustable offsets for both temperature and humidity and the transmitter ranges are field configurable. This unit can be configured with up to four transmitted variables.

BAPI-Stat 4
"X-Combo"

Specifications

Supply Voltage:

DC Power:16 to 30VDC

AC Power:18 to 30VAC*

Power Consumption: 50mA max. DC, 1.5VA max. AC

RH/Temp Sensor Construction:

Communicating Integrated Circuit

Humidity: Capacitive Polymer,
±2%RH @ 25°C (77°F), 20 to 80%RH

Temp: Semi-conductor Band Gap,
±0.5°C (±0.9°F) @ 20 to 40°C (68 to 104°F)

Optional Direct Temp. Sensor:

Thermistor or RTD (See Sensors Sect. for Specs.)

Available Outputs:

3 Configurable, 1 Passive Sensor

Termination: 8 Terminals, 16 to 22 AWG**

Mounting:

Standard 2x4" J-Box or Drywall, screws provided

Enclosure Material: ABS Plastic, UL94 V-0

Ambient (Enclosure):

Temperature: .32 to 122°F (0 to 50°C)

Humidity:0 to 95%RH, Non-Cond.

Agency: RoHS

*AC power requires a separate pair of shielded wires.

**BAPI recommends that you do not run wiring for the room units in the same conduit as line voltage wiring or with wiring used to supply highly inductive loads such as motors, generators and coils.

(required for Delta Style Enclosures)

BW	Bright White Delta Style Enclosure
----------	------------------------------------

Additional options are available for these units but not shown in this Selection Guide. Contact your BAPI representative for the complete list of options.

Pressure Pickup Ports are available for the Delta Style Enclosures without Setpoint or Override. See "Pressure Pickup Ports" in the Pressure Section for ordering.

Example Number: BA/ (10K-2) - (B4) (80) (L6) - (N) - (C35) - (CG) - ()

Actual Number (with parenthesis removed): BA/10K-2-B480L6-N-C35

Description: 10K-2 Thermistor, BAPI-Stat 4, 0 to 20K Setpoint Output Range, Cool Warm Legend, Override in Parallel with Sensor, C35 Comm. Jack, Common Ground Configuration

List Price:

\$18 (Thermistor) + \$7 (Enclosure) + \$6 (Setpoint) + \$5 (Override) + \$7 (Comm. Jack) = \$43 List Price

Your Number: BA/

Features & Options

- Sensor Fits Inside a Decora Style Rocker Switch Plate Cover
- LCD Readout of Local Temperature
- Optional Setpoint Adjustment
- °F or °C Indication (Field Selectable)
- Wide Selection of Temperature Sensing Elements

The low profile Decora Style Room Unit fits inside a Decora Style Rocker Switch Wall Plate Cover. It features measurement and display of local temperature with optional pushbutton setpoint adjustment. The room temperature is shown on an easy-to-read LCD with field-selectable °F or °C display.

The Setpoint values are transmitted as resistive values for easy configuration with the controller. The sensor and setpoint outputs can be configured for “common ground” or “differential” controller inputs.

Adjustment**

Specifications

Power: 5 VDC to 12 VDC $\pm 5\%$

Power Consumption: 0.5 mA

Sensing Element:

Thermistor or RTD (See Sensors Sect. for Specs.)

Wiring: 2 to 3 pair of 16 to 22AWG*

Mounting:

Standard 2"x4" J-box with Decora Style Trim Plate

Environmental Operation Range:

Temperature: 32 to 122 °F (0 to 50 °C)

Humidity: 0 to 95%, non-condensing

Material: ABS Plastic

Material Rating: UL94 V-0

*BAPI recommends that you do not run wiring for the Room Units in the same conduit as line voltage wiring or with wiring used to supply highly inductive loads such as motors, generators and coils.

Associated Products

VC350A “EZ” - Voltage Converter

BAPI recommends using DC power on room units for a more stable reading. Our 350mA “EZ” unit is a perfect way to convert 24 VAC to 5, 12, 15 or 24 VDC.

Submittal sheets without List Prices are available on our website at www.bapihvac.com

Features & Options

- Small Flush Sensor Mounting
- Accurate Direct Air Measurement
- Paintable with Latex or Oil Base
- Wide Selection of Sensing Elements
- Limited Lifetime Warranty

The Low Profile "Button" Sensor is ideal for locations where aesthetics are as important as the temperature measurement. The inconspicuous wall sensor mounts easily by pushing through a 1/2" hole and secured with a peel-off insulating adhesive ring. The only visible portion is a flush 7/8" dot on the wall.

The Low Profile "Button" Sensor is available in white or black with multiple thermistor or RTD sensors as shown in the ordering grid. Other sensor types are available on request.

Features & Options

- BAPI-Stat 4 Enclosure
- 4 to 20 mA Temperature Output
- Optional Display
- Optional Setpoint Adjustment, Override and Communication Jack

The T1K Transmitter Room Unit comes in the BAPI-Stat 4 style enclosures. They measure the room temperature and output a 4 to 20mA signal per the custom range selected at the time of order.

The BAPI-Stat 4 Style unit offers a full range of options including setpoint, override, display, communication jack, field offset, field ranging, °F or °C and a new stylish look.

BAPI-Stat 4 Units with and without display, setpoint and override

Specifications

Power:

12 to 30VDC (28 VDC max. recommended)

Transmitter Output:

Features & Options

- Etched Teflon Leadwires and Foamback Insulator
- Three Override Pushbutton Options
- Wide Selection of Temperature Sensing Elements
- Limited Lifetime Warranty

Wall Plates are ideal for areas where a discreet, rugged zone sensor is required. All Wall Plates feature ¼" closed cell foam backing which covers the plate and insulates it from wall temperature. All units also feature etched Teflon leadwires and double encapsulated sensors to create a watertight package that can perform in the real world.

Override

A momentary Override is available as a Keyswitch or three styles of Pushbutton — Standard and Low Profile. The Standard model features a small, momentary pushbutton. The Low Profile Model is water resistant for washdown/wipedown applications and is available with a green LED indicator.

Color and Finish Options

Wall Plates are available in aluminum or stainless steel with a metallic finish; however, many other color and finish options are available as special orders. Call BAPI for details.

Specifications

Features & Options

- Series 304 Stainless Steel Probes: 2, 4, 6, 8, 12 & 18"
- Five Enclosure Styles
- Double Encapsulated Sensors & Etched Teflon Leads
- Limited Lifetime Warranty
- Wide Selection of Temperature Sensing Elements

Single Point Duct Units feature closed cell foam to seal the probe insertion hole and to absorb vibration. Mounting tabs allow for easy installation directly to the wall of the duct.

All Duct Units have etched Teflon leadwires and double encapsulated sensors to create a watertight package that can withstand high humidity and condensation and perform under real world conditions. Duct Units have probe lengths from 2" to 18" to accommodate most duct shapes and sizes. Custom probe lengths are also available.

Duct Units come standard with a 2"x2" steel J-Box but are also available with no box, the BAPI-Box, the BAPI-Box 2 or the BAPI-Box Crossover enclosures.

The BAPI-Box Crossover

The BAPI-Box Crossover features a hinged cover with thumb latch for easy termination. A pierceable knockout plug is available for the open port. See the Accessories section for more info.

Features & Options

- Averaging Lengths: 8', 12' and 24'
- Five Enclosure Styles

BAPI Duct Averaging Units feature closed cell foam to seal the probe insertion hole and absorb vibration. Mounting tabs allow for easy installation to the duct. All units have etched Teflon leadwires and encapsulated sensors to create a watertight package that can perform under real world conditions.

Averaging probes should be used wherever there is a chance for stratified layers of hot and cold air. Averaging probes are made of bendable aluminum tubing and measure temperature along their entire length. Nylon tie straps are provided for mounting.

Duct Averaging Units come standard with a 2"x2" steel J-Box but are also available with no box, the BAPI-Box, the BAPI-Box 2 or the BAPI-Box Crossover enclosures.

Flexible Probe Bracket

The Flexible Probe Bracket (FPB) simplifies the mounting of averaging sensors. The bracket is used to

reverse the direction of the probe with a smooth arc to eliminate the risk of kinking.

Features & Options

- Probe Lengths: 2", 4" & 8" (fit standard BAPI Thermowell lengths)
- Series 304 Stainless Steel Probes and four Enclosure Styles
- Double Encapsulated Sensors & Etched Teflon Leadwires

Immersion Units are available in 2", 4" and 8" probe lengths. The sensor is potted inside a 1/4" stainless steel probe with thermally conductive compound.

All Immersion Units have etched Teflon leadwires and double encapsulated sensors to create a watertight package that can withstand high humidity and condensation.

Immersion Units come standard with a 2"x2" steel J-Box but are also available with no box, the BAPI-Box, the BAPI-Box 2 or the BAPI-Box Crossover enclosures.

BAPI Thermowells

Immersion Unit Probes are designed to be inserted into a Thermowell. For more info on Thermowells, see page B42.

Features & Options

- Probe Lengths: 2", 4" and 8" (fit standard BAPI Thermowell lengths)
- Series 304 Stainless Steel Probes
- Double Encapsulated Sensors
- Three Optional Enclosures

Immersion Units are available in 2", 4" and 8" probe lengths. This unit is provided with a 1/4" stainless steel probe and a 1/2" NPT double-ended stainless steel fitting.

The sensors are potted inside the probe with a thermally conductive compound. All units have etched Teflon leadwires and double encapsulated sensors to create a watertight package that can withstand high humidity and condensation.

Immersion Probes are available with a metal Weatherproof enclosure, or a polycarbonate BAPI-Box Crossover or BAPI-Box 2.

Specifications

Environmental Operation Range:
 Temperature Sensor: -40 to 105 °C
 Humidity: 0 to 100%, non-condensing

Enclosure Material:
 Weatherproof: Cast Aluminum
 BAPI-Box 2: UV-res. Polycarb., UL94 V-0
 BAPI-Box Crossover:
 Cover: Polycarbonate, UL94 V-0
 Base: Nylon, UL94 HB

Sensing Element: Thermistor or RTD
 (See Sensors Section for Specs.)

Probe Material: Stainless Steel, 1/4" dia.

Enclosure Rating:
 Weatherproof: IP24, NEMA 3R

BAPI-Box Crossover:
 IP10, NEMA 1
 (IP44 with knockout plug in open port)

BAPI-Box 2: IP66, NEMA 4X

Encl. Dimensions: H x W x D
 BAPI-Box Crossover:.....3.1 x 2.2 x 1.9" (79 x 56 x 49mm)
 Weatherproof.....4.5 x 2.75 x 2.2" (114 x 70 x 55mm)
 BAPI-Box 2:.....4.9 x 2.8 x 2.35" (125 x 71.6 x 60mm)

Features & Options

- Three Lengths: 2", 4" and 8"
(Fit standard Immersion Unit lengths)
- Stainless Steel (304 or 316) or Brass
- Other Lengths Available Upon Request
- Limited Lifetime Warranty

**Machined
Thermowell**

Standard Thermowells available from BAPI include machined 304 stainless steel, 316 stainless steel, brass. These wells are offered in 2", 4" and 8" lengths with 1/2" NPT external and 1/2" NPSM internal. Other lengths and thread diameters are available upon request.

The Thermowell chosen for an installation is governed mainly by the corrosion conditions the well will face. The machined stainless steel wells all come with a mirror polish to provide maximum corrosion resistance.

Occasionally, the material consideration is one of strength rather than corrosion. For example, a machined stainless steel well may be required for high pressure water service where otherwise a brass thermowell would be satisfactory from a corrosion standpoint.

Specifications

NPT= National Pipe Taper
NPSM=National Pipe Straight Mechanical (not tapered)

Ordering Information

Part #	Description	List Price
BA/2"M304.....	Machined 304 Stainless Steel - 2"	\$24
BA/4"M304.....	Machined 304 Stainless Steel - 4"	\$30
BA/8"M304.....	Machined 304 Stainless Steel - 8"	\$46
BA/2"M316.....	Machined 316 Stainless Steel - 2"	\$44
BA/4"M316.....	Machined 316 Stainless Steel - 4"	\$50
BA/8"M316.....	Machined 316 Stainless Steel - 8"	\$80
BA/2"MB	Machined Brass - 2"	\$23
BA/4"MB	Machined Brass - 4"	\$26
BA/8"MB	Machined Brass - 8"	\$45

Note: Standard thread size is 1/2" NPT external, and 1/2" NPSM internal. 2" units have an insertion length of 2.5" (5.1 cm). 4" units have an insertion length of 4.5" (11.43 cm). 8" units have an insertion length of 7.5" (19.05 cm).

Gray shaded items follow the Buy and Resale Multiplier.

Comparing the Wake Frequency and the Resonant Frequency

Thermowell failures, in most cases, are not due to the effects of pressure or temperature on the thermowell. The calculations necessary to provide adequate strength, under given conditions, are familiar enough to permit proper choice of wall thickness and material. The values shown in Table 1 are conservative, and intended primarily as a guide.

Less familiar, and more dangerous, are the **vibration effects** to which thermowells are subjected. Fluid, flowing by the thermowell, forms a turbulent wake (called the Von Karman Trail) which has a definite frequency, based on the diameter of the thermowell and the velocity of the fluid. It is important that the thermowell have sufficient stiffness so that the wake frequency will never equal the resonant (natural) frequency of the thermowell itself. If the resonant frequency of the thermowell coincided with the wake frequency, the thermowell would vibrate to destruction and break off in the piping. Thermowells are also safe if the resonant frequency is thermowell **below** the wake frequency or if the fluid velocity is constantly fluctuating through the critical velocity point.

Nevertheless, if the installation is not hampered by the use of a sufficiently stiff thermowell, we recommend the values given in Table 2 not be exceeded.

Table 1: Pressure Rating versus Temperature

Thermowell Material	Temperature in Degrees Fahrenheit						
	70°F	200°F	400°F	600°F	800°F	1000°F	1200°F
	Pressure Rating (Pounds per Square Inch)						
Brass	5000	4200	1000	-	-	-	-
304 S.S.	7000	6200	5600	5400	5200	4500	1650
316 S.S.	7000	7000	6400	6200	6100	5100	2500

Table 2: Maximum Fluid Velocity versus Insertion Length

Thermowell Material	Fluid Type	Insertion Length (inches)		
		1-2"	1-4"	1-8"
		Maximum Fluid Velocity (Feet per Second)		
Brass	Air/Steam	207	75.5	27.3
	Water	59.3	32.2	19.7
304 S.S.	Air/Steam	300	109	39.5
316 S.S.	Water	148	82.2	-

The values shown in Table 2 are based on operating temperatures of 350°F for brass and 1,000°F for 304 and 316 stainless steel (S.S.). Slightly higher velocities are possible at lower temperatures.

Boiler, Stack or Cryogenic

Features & Options

- Stainless Steel Probe & Industrial Construction
- Double-ended 1/2" NPT Stainless Steel Fitting
- Optional Weatherproof Enclosure
- Standard or Outside Mount Configurations

The Extreme Temperature Platinum RTD Units are designed for use in applications from -200°C to 600°C. They are packaged to handle vibration, moisture, and wide temperature ranges.

The Immersion Unit has a stainless steel probe with a 1/2" NPT double-ended stainless steel fitting. It is available with a cast aluminum Weatherproof enclosure.

The Remote Unit has a stainless steel probe with PTFE jacketed cable or fiberglass insulated leads and is available as a probe alone or with a BAPI-Box Crossover or Weatherproof enclosure.

These units can be used with a remote mounted BAPI ruggedized temp transmitter to provide a linear proportional 4 to 20 mA output. For more info, see page A58.

Specifications

Sensor Type: Platinum 1KΩ RTD (3.85 Ω/°C)

Reference Resistance: 1KΩ at 0°C

Operating Range: -328 to 1,112°F (-200 to 600°C)

Humidity: 0 to 100%, non-condensing

Standard Accuracy: 0.1% at 0°C

Wiring to Probe:

PTFE Jacketed Cable or Fiberglass Insulated Leadwire

[1] PTFE Jacketed, -328 to 32°F (-200 to 0°C)

[2] PTFE Jacketed, 77 to 500°F (25 to 260°C)

[3] Fiberglass Ins., 77 to 1,112°F (25 to 600°C)

Enclosure Material:

Weatherproof: Cast Aluminum

BAPI-Box Crossover:

Cover: Polycarbonate, UL94 V-0

Base: Nylon, UL94 HB

Enclosure Operating Range:

Weatherproof: -100 to 1,000 °F (-73 to 538 °C)

BAPI-Box Crossover: -40 to 185 °F (-40 to 85 °C)

Enclosure Rating:

Weatherproof: IP24, NEMA 3R

BAPI-Box Crossover (BBX):

IP10, NEMA 1

IP44 with knockout plug in open port

Encl. Dimensions: H x W x D

BAPI-Box Crossover: 3.1 x 2.2 x 1.9" (79 x 56 x 49mm)

Weatherproof: 4.5 x 2.75 x 2.2" (114 x 70 x 55mm)

(For enclosure dimension drawings, see the end of the section)

Features & Options

- Clamp-On, Spring-Loaded or Remote Probes
- Junction Box or BAPI-Box Crossover Enclosure

These units are designed to monitor water temperature in retrofit or filled pipe applications. The strap units fit around the outside of a pipe, while the remote probes are strapped directly onto the pipe. All three units measure the water temperature by sensing the surface temperature of the pipe.

Strap Units and Remote Probes come standard with a Junction Box enclosure but are also available with a BAPI-Box Crossover enclosure.

Clamp-On Strap – This unit has a bendable copper sensing plate which forms to the curvature of the pipe. An adjustable hose clamp holds the unit in place around the pipes from 2 to 4.5" (5 to 11.4 cm) in diameter.

Spring-Loaded Strap – Instead of removing the pipe insulation, the spring loaded sensing pad is held against the pipe through a hole cut in the insulation. It can be used with 5 to 14.5" (13 to 37 cm) dia. pipes with up to 2" of insulation.

Remote Probes - These units have a 1.75" long stainless steel probe with either Plenum-Rated Cable or FEP-Jacketed Cable with a lead length of 18" (Other lengths are available by calling BAPI). Remote Probes are ideal for strap-on applications on any size pipe, or hard-to-access areas.

(See pg B50 for more Remote Probe Options.)

The BAPI-Box Crossover

The BAPI-Box Crossover enclosure features a hinged cover with thumb latch for easy termination. A pierceable knockout plug is available for the open port. See the Accessories section for more info. (Shown with knockout plug sold separately.)

Specifications

Enclosure Material:

Junction Box: Galvanized Steel

BAPI-Box Crossover:

Cover: Polycarbonate, UL94 V-0

Base: Nylon, UL94 HB

Environmental Operation Range:

Temperature Sensor:

Clamp On: -40 to 85 °C,

Spring Loaded: -40 to 85 °C

Remote Probe w/ Plen. Cable: -40 to 105°C

Remote Probe w/ FEP Cable: -20 to 75°C

Temperature Transmitter: -20 to 70 °C

Humidity: 0 to 95%, non-condensing

Enclosure Rating:

Junction Box: IP20, NEMA 1

BAPI-Box Crossover (BBX):

IP10, NEMA 1

Description: 4 to 20mA Transmitter, 32 to 212°F Range, Clamp-On Strap, BAPI-Box Crossover

List Price: \$125 + \$10 = \$135 List Price

Your Number: BA/

Features & Options

- Quick-Response Sensor
- IP66/NEMA 4 BAPI-Box 2 Enclosure Style
- Well-Vented Sensor Guard

Outside Air Units are designed to be mounted outdoors. The UV-resistant plastic shield keeps the sensor out of the sunlight and allows for excellent air circulation. The units are available in a BAPI-Box 2 polycarbonate enclosure which carries an IP66/NEMA 4 rating.

All Outside Air Units have etched Teflon leadwires and can withstand high humidity and condensation and perform under real world conditions. This is especially important in an outside air application which can be exposed to rain, snow and large temperature swings.

Weather Shade

External temperature, humidity and air quality sensors can be affected by solar heat gain. The BAPI Weather Shade effectively blocks the solar heat gain, improving the accuracy of the sensor.

(See Accessories for more info.)

Outside Air Temperature Sensor in a BAPI-Box 2 Enclosure

Specifications

Environmental Operation Range:

Temperature Sensor: -40 to 85 °C

Temperature Transmitter: -20 to 70 °C

Humidity: 0 to 100%, non-condensing

Sensing Element:

Thermistor or RTD

(See Sensors Section for Specs.)

Enclosure Rating: IP66, NEMA 4

Enclosure Material:

UV-resistant polycarbonate, UL94 V-0

Features & Options

- Etched Teflon Leads on Remote Sensors
- Plenum-Rated, FEP-Jacketed or Halogen-Free Cable
- Double Encapsulated Sensors on Remote Probes

BAPI Remote Sensors feature a .75" long encapsulation shell and etched Teflon leads in lengths of 6", 18", 5', 10', 15', 20', and 25'. Remote Sensors are perfect for tight locations. Additional cable options, lead lengths and probe styles are available.

Remote Probes feature a 1.75" long stainless steel probe with either Plenum-Rated Cable, FEP-Jacketed Cable or Halogen-Free Cable. Lead lengths are 18", 5', 10', 15', 20', and 25'. Remote Probes are commonly used in refrigerated case or strap-on applications. They are ideal for hard-to-access areas or spaces where the usual Immersion or Duct Sensors do not fit well. Additional cable options, lead lengths and probe styles are available upon request.

Remote Sensors and Probes are available with a BAPI-Box Crossover or the BAPI-Box 2 enclosure.

The BAPI-Box Crossover

The BAPI-Box Crossover enclosure

features a hinged cover with thumb latch for easy termination. A pierceable knockout plug is available for the open port. See the Accessories for more info.

(Shown with knockout plug sold separately.)

Remote Sensor with Epoxy Shell

BAPI-Box 2 (BB2)

BAPI-Box Crossover (BBX)

Specifications

Environmental Operation Range:

Temperature Sensor: -40 to 105 °C
 Units w/ Plenum-Rated Cable: -20 to 75 °C
 Units w/ Halogen-Free Cable: -40 to 90 °C
 Temperature Transmitter: -20 to 70 °C
 Humidity: 0 to 100%, non-condensing

Sensing Element: Thermistor or RTD
 (See Sensors Section for Specs.)

Round Probe Material: Stainless Steel

Cable Types:

Remote Sensor:
 6" Leads: Etched Teflon
 18" to 25' Leads: Plenum-Rated Cable

Remote Probes (selected at time of order):
 Plenum-Rated, FEP-Jacketed, Submersible
 FEP-Jacketed or Halogen Free

Enclosure Material:

BAPI-Box 2: UV-resistant polycarb., UL94 V-0
 BAPI-Box Crossover:
 Cover: Polycarbonate, UL94 V-0
 Base: Nylon, UL94 HB

BAPI-Box Crossover Enclosure Rating:

IP10, NEMA 1 (IP44 with knockout plug in open port)

BAPI-Box 2 Enclosure Rating: IP66, NEMA 4X

Enclosure Dimensions: H x W x D

BAPI-Box Crossover:
 3.1 x 2.2 x 1.9" (79 x 56 x 49mm)
 BAPI-Box 2: 4.9 x 2.8 x 2.4" (125 x 72 x 60mm)

(For enclosure dimension drawings, turn to the end of the section.)

Features & Options

- Waterproof, Double Encapsulated Sensors
- Concave Probe or Remote Probes
- Optional BAPI-Box Crossover or BAPI-Box 2 Enclosure
- FEP-Jacketed Cable in 5 Color Choices

The Concave Probes feature a 1.35" long brass encapsulation shell with a concave indentation so that they fit on the outside of pipes such as condensor lines. Remote Probes feature a 1.75" long stainless steel probe without an indentation. Both probes come with FEP-jacketed cable in a choice of 5 colors and lead lengths.

Remote probes are commonly used in refrigerators, freezers, dry storage, car wash bays and other hard-to-access areas where immersion or duct sensors do not fit well.

Remote Sensors and Probes are available with a new BAPI-Box Crossover enclosure or BAPI-Box 2 Enclosure.

Features & Options

- Copper Encapsulation Shell and Thermal Adhesive for Increased Temperature Transfer
- Easy to Install on Flat Surfaces
- Optional BAPI-Box 2 or Crossover
- FEP-Jacketed Cable

The Surface Sensor features a 0.75" diameter copper encapsulation shell with a thermally adhesive tape to mount on flat surfaces.

Surface Sensors are commonly used on glass windows and doors, solar panel modules, and other hard-to-access areas where a Remote Probe may be difficult to mount.

Surface Sensors are available with a BAPI-Box Crossover or BAPI-Box 2 enclosure. Unit includes a square closed-cell foam cover to isolate the sensor from the ambient air.

Includes square foam cover to insulate sensor from ambient air

Features & Options

BAPI's Temperature Transmitter has a field adjustable output of 4 to 20 mA or 1 to 5, 0 to 5, 2 to 10, 0 to 10 VDC over a selected temperature range. (see min and max temperature ranges below). These adjustable outputs can be set at the factory to order or default set to 4 to 20mA.

These transmitters are available with a wired connection via flying leads or a pluggable terminal block (-TS).

These transmitters can be mounted in a variety of enclosures. The unit is fully encapsulated (ruggedized) with a high thermal conductivity material to prevent circuit overheating and is water resistant. It is available with a BAPI-Box Crossover or BAPI-Box 2 enclosure.

Specifications

Power Required: 12 to 40VDC

Transmitter Output:

4 to 20mA, 0 to 5, 1 to 5, 0 to 10
or 2 to 10VDC, 850Ω@24VDC

Output Wiring: 2 Wire Loop

Flying Leads (4 to 22 AWG)
or 4 Terminal Block (24 to 12 AWG)

Calibration Span:

Min. 30°F (16.6°C), Max 1000°F (555°C)

Calibration Zero:

Min. -148°F (-100°C), Max 900°F (482°C)

System Accuracy: ±0.065% of Span

Linearity: ±(0.125 × T-20°C)/100

RTD Sensor (2 Wire):

1KΩ, 2 Wire Platinum, 385 Curve
Matched (M): 13 to 302°F (-25 to 150°C)
with 3-point certificate (25%, 50% & 75%)

Mounting Shell:

ABS w/ waterproof urethane fill

Transmitter Ambient:

-4 to 158°F, (-20 to 70°C)
0 to 95% RH, Non-condensing

BAPI-Box 2 Enclosure Material:

UV-resistant polycarbonate, UL94 V-0

BAPI-Box 2 Enclosure Rating:

IP66, NEMA 4X

TXS..... 1K Plat. RTD, 1KΩ @ 0°C with Field Selectable Voltage Output..... \$100
TXSM..... 1K Plat. RTD, 1KΩ @ 0°C with Field Selectable Voltage Output and NIST certification .. \$280

#2: Voltage Output (optional, only applicable if TXS or TXSM is selected in Option #1 above)

05..... 0 to 5V
10..... 0 to 10V
12..... 2 to 10V
15..... 1 to 5V

#3: Temperature Transmitter Range (required)

[32 TO 212F] 32 to 212°F Range
[20 TO 120F] 20 to 120°F Range
[0 TO 100F] 0 to 100°F Range
[0 TO 100C] 0 to 100°C Range
[-7 TO 49C]..... -7 to 49°C Range
[-18 TO 38C]..... -18 to 38°C Range

#4: Configuration and Optional Enclosure (required)

XOR-STM..... Transmitter in snaptrack mountable shell, no metal plate
XOR-TRK Transmitter with 1.25" wide piece of 2-3/4" snaptrack \$5
XOR-BB2..... Transmitter in a BAPI-Box 2 enclosure (IP66) \$12
XOR-BBX Transmitter in a BAPI-Box Crossover enclosure (IP10)..... \$0

#5: Screw Terminals (optional)

TS..... Terminal Strip terminals for RTD, power and signal \$0

Additional options and custom ranges are available for these units but not shown in this Selection Guide. Contact your BAPI representative for the complete list of options. Submittal sheets without List Prices can be downloaded from our website at www.bapihvac.com

Example Number: BA/(TXS)(10)([0 to 100F]) - (XOR-BBX) - ()

Actual Number (with parenthesis removed): BA/TXS10[0 to 100F]-XOR-BBX

Description: T1K Transmitter, 0 to 10V Output, 0 to 100°F Range, BAPI-Box Crossover Enclosure.

List Price: \$100 (T1K Transmitter) = \$100 List Price

Your Number: BA/

Features & Options

- Fluid-Filled Chamber Tracks Temperature of Freezer or Cooler Contents, Not Air Temperature, Decreasing False Alarms
- Easy Wall Mount or Wire Shelf Hanger
- Available with Extreme Temp Sensor for -328 to 32°F (-200 to 0°C)

The BAPI Thermbuffer Temperature Sensor is used to simulate the refrigerator contents rather than the refrigerator air temperature. The fluid-filled chamber allows for slower reaction to abrupt temperature changes, yet still maintains long-term accuracy if the change remains permanent. It eliminates the temperature spikes due to frequent refrigerator or freezer door opening and decreases false alarms.

The Thermbuffer comes in three buffer sizes 1", 2" and 4" and is designed to save valuable shelf space by mounting to the wall or by hanger in a refrigerator or freezer. The buffer chamber is machined in 304 Stainless Steel or aluminum and accommodates a variety of temperature sensors or transmitters to interface with all BAS systems.

The BAPI-Box Crossover

The BAPI-Box Crossover enclosure features a hinged cover with thumb latch for easy termination. A pierceable knockout plug is available for the open port. See the Accessories section for more info. *(Shown with knockout plug sold separately.)*

BAPI-Box Crossover with 2" Buffer Chamber

BAPI-Box 2 with 1" Buffer Chamber

1" Hanging Bracket

Specifications

Sensor: Thermistor, RTD or Transmitter
(See Sensors Section for specifications.)

Probe: Stainless steel

Wire: 22 awg stranded, 2 or 3 wires

Insulation:
Etched Teflon or FEP-Jacketed; PTFE for 1K[1]

Wiring to Probe:
Extreme Temp Probe 1K[1]: PTFE-Jacketed Cable, -328 to 32°F (-200 to 0°C)

Buffer Chamber Construction:
M304: Bar stock 304 stainless steel
MAL: Bar stock aluminum
Hanging Bracket: Bar stock 304 stainless steel

Chamber Fluid: Customer supplied
Glycol Mix, Food grade required

1" Chamber: ~5 ml of fluid
2" Chamber: ~24 ml of fluid
4" Chamber: ~32 ml of fluid

Note: Unit requires customer-supplied food grade glycol antifreeze for proper operation.

Enclosure Ratings:

BAPI-Box Crossover:
IP10, NEMA 1 (IP44 with knockout plug in open port)
BAPI-Box 2: IP66, NEMA 4X

Enclosure Material:

BAPI-Box 2: UV-resistant polycarb., UL94 V-0
BAPI-Box Crossover:
Cover: Polycarbonate, UL94 V-0
Base: Nylon, UL94 H

Environmental Operating Range:

Standard Temp Sensor: -40 to 185°F (-40 to 85°C)
Extreme Temp Sensor: -328 to 32°F (-200 to 0°C)
Temp. Transmitter: -4 to 158°F (-20 to 70°C)
Humidity: 0 to 100%RH, Condensing

Agency: CE, RoHS

Encl. Dimensions: H x W x D

BAPI-Box Crossover: 3.1 x 2.2 x 1.9" (79 x 56 x 49mm)
BAPI-Box 2: 4.9 x 2.8 x 2.35" (125 x 71.6 x 60mm)

(For enclosure and buffer chamber dimension drawings, see the end of the section.)

Features & Options

- Plenum-rated Etched Teflon Leads or Cable
- Probe Lengths from 1.75" to 48"
- 1/4" Stainless Steel Probes
- Fits BAPI Duct, Immersion or Remote Sensor Applications
- Double Encapsulated

BAPI's Duct, Immersion and Remote temperature replacement probes are easy to field swap to save time and money when the old probe becomes damaged or the sensor requirements have changed.

Replacement Probes feature a standard 1/4" stainless steel probe, double encapsulated temperature sensor with minimum 6" 22 AWG Etched Teflon lead wires. The probes are available in various lengths from 1.75" to 48". The leads are available in a variety of lengths including 18", 5', 10', 15', 20', and 25'.

Additional cable options, lead lengths, and probe styles are available upon request. See the order grid to select the probe replacement for your application.

For detailed specifications on the individual Sensors & Transmitters, turn to "Sensors" Section.

Features & Options

- Optional Temperature Setpoint Adjustment and Occupant Override
- Temp, Humidity and Room Occupancy Status Display
- Higher Contrast Display for Improved Clarity at Greater Distances

BAPI's BAPI-Stat Quantum room sensors feature a modern enclosure style with slider setpoint adjustment and occupancy override.

The optional LCD can display both temperature and humidity as well as room occupancy status. The display has been upgraded for higher contrast, providing improved clarity at greater distances.

It is available with an optional occupancy override, 3.5mm (1/8"), RJ11 or RJ22 Communication Jack and a 60mm mounting base is also available to fit European style junction boxes.

**BAPI-Stat
"Quantum"
Sensors**
(Bottom image shown with optional 60mm mounting base)

Specifications

Power:

12 to 35 VDC for 4 to 20 mA or 0 to 5 VDC Output
15 to 35 VDC for 0 to 10 VDC Output
15 to 28 VAC for 0 to 5 VDC or 0 to 10 VDC Output
(AC power requires a separate pair of shielded wires.)

Power Consumption:

20 mA max. for 4 to 20 mA Output
4 mA max. for 0 to 5 VDC and 0 to 10 VDC Output
0.1 VA max. for 0 to 5 VDC and 0 to 10 VDC Output

Temp/%RH Sensor Construction:

Communicating Integrated Circuit

Humidity: Capacitive Polymer,
±2%RH @ 25°C (77°F), 20 to 80%RH

Temp: Semi-conductor Band Gap,
±0.3°C (±0.54°F) @ 20 to 40°C (68 to 104°F)

Field Calibration Adjustment:

±5% in 0.1% increments (Factory Calibrated)

Optional Passive Temperature Sensor Accuracy:

±0.36°F Thermistor, ±0.5°F RTD (Higher accuracy available)

Wiring: 2 to 5 pair of 16 to 22 AWG*

Mounting: Standard 2"x4" junction box, European junction box or drywall mount (screws provided)

Environmental Operation Range:

32 to 122 °F (0 to 50 °C) • 0 to 95%, non-condensing

Material & Rating: ABS Plastic, UL 94, V-0

Agency: CE EN 61326-1:2013 EMC, RoHS

*BAPI recommends that you do not run wiring for the Room Units in the same conduit as line voltage wiring or with wiring for highly inductive loads such as motors, generators and coils. Also, these units are not designed for line voltage applications.

Features & Options

- BAPI-Stat "Quantum Prime" Enclosure Style with Higher Contrast Display for Improved Clarity at Greater Distances
- Membrane Keypad for Wipedown Cleaning
- Temperature and Humidity Setpoint Adjustment

The BAPI-Stat "Quantum Prime" is designed for operating rooms, clean rooms and elder care facilities. It features a large display and membrane keypad for wipedown cleaning. It is available with temperature and humidity measurement, temperature and humidity setpoint and occupant override.

The unit includes a number of field adjustments including °F or °C display, temperature and humidity offset and setpoint lockout. The display can also be set to show a large temperature and small %RH reading or a large %RH and a small temperature reading when 4 buttons are present.

This unit can be configured with up to four transmitted variables. Contact your BAPI representative for details.

A 60mm mounting base is also available to fit European style junction boxes.

Ordering Information

The BAPI-Stat “Quantum Prime” Wipedown Sensor is a powerful unit with many options. Please call your BAPI representative for ordering. We will provide a quote and keep it on record for future orders.

Specifications

Power Supply:

10 to 40 VDC (15 to 24 VDC Recommended) for 4 to 20 mA or 0 to 5 VDC Outputs

15 to 40 VDC (15 to 24 VDC Recommended) for 0 to 10 VDC Outputs

12 to 28 VAC (Requires a separate pair of shielded wires) for 0 to 5 VDC Outputs

15 to 28 VAC (Requires a separate pair of shielded wires) for 0 to 10VDC Outputs

Power Consumption:

100 mA max DC 4 to 20 mA Output (<30mA typical)

75 mA max DC 0 to 5 or 0 to 10 VDC Outputs (6mA typical)

1.9 VA max AC..... 0 to 5 or 0 to 10 VDC Outputs (0.2VA typical)

Outputs: 4 active outputs plus 1 passive temp sensor

Volts 0 to 5 VDC or 0 to 10VDC, Impedance >10K Ω

Current..... 4 to 20 mA, Impedance <500 Ω @ 24 VDC

Resistance..... Setpoint, 5 VDC @ 5 mA max

Relay Contact..... N.O., 500 mA @ 24 VDC max

Temp. Sensor Passive RTD or Thermistor

Inputs:

External Override..... 5 VDC or 24 VDC/VAC

External Sensor..... 10K-2 Thermistor purchased separately.

Sensing Elements for Active Outputs and Display:

Temperature 10K-2 Thermistor

Humidity..... Capacitive Polymer, $\pm 2\%$ RH

Mounting: Standard 2"x4" junction box, European junction box or drywall mount (screws provided)

Environmental Ambient:

Temperature 32 to 122°F (0 to 50°C)

Humidity..... 0 to 95%, non-condensing

Storage 32 to 185°F (0 to 85°C)

Wiring: 2 to 6 pair of 16 to 22 AWG*

Enclosure Material: ABS Plastic, UL 94, V-0

Agency: CE EN 61326-1:2013 EMC, RoHS

*BAPI recommends that you do not run wiring for room units in the same conduit as line voltage wiring or with wiring used to supply highly inductive loads such as motors, generators and coils.

Features & Options

- Temperature and Humidity Setpoint Adjustment
- Large Easy-to-Read Display, °F or °C Indication
- Fully Compensated 2% RH Sensor
- Optional Override, Resistive Temperature Sensor and Communication Jack

The BAPI-Stat 4 "X-Combo" Room Unit features local indication of both temperature and humidity with optional Temperature Setpoint, Humidity Setpoint and Local Occupancy Override.

The optional LCD shows room temperature in °C or °F and room humidity in %RH. In addition, the unit has adjustable offsets for both temperature and humidity and the transmitter ranges are field configurable. This unit can be configured with up to four transmitted variables.

Specifications

Supply Voltage:

DC Power: 16 to 30VDC

AC Power: 18 to 30VAC*

Power Consumption: 50mA max. DC, 1.5VA max. AC

RH/Temp Sensor Construction:

Communicating Integrated Circuit

Humidity: Capacitive Polymer,

±2%RH @ 25°C (77°F), 20 to 80%RH

Temp: Semi-conductor Band Gap,

±0.3°C (±0.54°F) @ 20 to 40°C (68 to 104°F)

Optional Direct Temp. Sensor:

Thermistor or RTD (See Sensors Sect. for Specs.)

Available Outputs: 3 Configurable, 1 Passive Sensor

Termination: 8 Terminals, 16 to 22 AWG**

Mounting:

Standard 2x4" J-Box or Drywall, screws provided

Enclosure Material: ABS Plastic, UL94 V-0

Ambient (Enclosure):

Temperature: .32 to 122°F (0 to 50°C)

Humidity: 0 to 95%RH, Non-Cond.

Agency: RoHS

*AC power requires a separate pair of shielded wires.

**BAPI recommends that you do not run wiring for the room units in the same conduit as line voltage wiring or with wiring used to supply highly inductive loads such as motors, generators and coils.

BAPI-Stat 4 “X-Combo” Temp/Humidity Unit

Humidity or Combination Temp/Humidity Sensors

C9

Ordering Information

The “X-Combo” is a very powerful unit with many options. Please call your BAPI representative for ordering. We will provide a quote and keep it on record for future orders

Features & Options

- Low Profile Delta Style Enclosure with Optional Display
- Humidity Only or Temperature/Humidity Combo
- 2% and 3% RH Accuracies
- Optional Communications Jack
- User Adjustable Toggle Rate Between Temp & Humidity Display
- Wide Selection of Temperature Sensing Elements
- Full-range Temperature Compensation of RH Signal
- Five Year Warranty

The Delta Style room units are available as Humidity Only sensors or as Combination temperature and humidity sensors. They feature an optional display with a user adjustable toggle rate between humidity and temperature and can display in either °C or °F.

The unit is available with the entire line of BAPI temperature sensors. If a temperature transmitter and humidity transmitter are desired, then see the "X-Combo" Unit on page C9 of this section.

Delta Style Enclosures with and without Display

Specifications

Power:

10 to 35 VDC (0 to 5 VDC or 4 to 20 mA Outputs)
15 to 40 VDC (0 to 10 VDC Output)
12 to 24 VAC (0 to 5 VDC Output)
15 to 28 VAC (0 to 10 VDC Output)

Note: If AC power is used, it must be shielded from the signal wiring

Power Consumption:

22 mA max. DC (0 to 5 VDC or 4 to 20 mA Outputs)
6 mA max DC (0 to 10 VDC Output)
0.53 VA max. AC (0 to 5 VDC Output)
0.14 VA max. AC (0 to 10 VDC Output)

Sensing Elements:

Temperature - Thermistor or RTD
(See "Sensors" section for specs.)

Humidity - Capacitive Type,
±2% or ±3%RH @ 25°C (77°F), 0 to 90%RH

%RH Calibration Adjustment: ±5% POT

Wiring: 2 to 3 pair of 16 to 22 AWG*

Mounting: 2"x4" J-box or drywall mount - screws provided

Environmental Operation Range:

Temp: 32 to 122 °F (0 to 50 °C)
Humidity: 5 to 95%, non-condensing

Material & Rating: ABS Plastic, UL94 HB

Agency: RoHS and CE

*BAPI recommends that you do not run wiring for the room units in the same conduit as line voltage wiring or with wiring used to supply highly inductive loads such as motors, generators and coils.

Features & Options

- 10 Points of Calibration from 10 to 90%RH
- Humidity Only or Temp./Humidity Combination
- Replaceable Filter
- $\pm 2\%$ and $\pm 3\%$ RH Accuracies
- BAPI-Box 2 or BAPI-Box Enclosure Styles
- Wide Selection of Temperature Sensing Elements

Humidity control is an important aspect of any climate control system. Therefore, humidity sensors must be both accurate and dependable. BAPI's humidity transmitters are calibrated at 10 points from 10 to 90% RH for accuracy, eliminating field calibration.

The Outside Air Units are also extremely dependable, featuring two of the most watertight enclosures available today. The BAPI-Box and BAPI-Box 2 are made of UV-resistant polycarbonate and carry an IP66 rating. The BAPI-Box is only available for units with a temperature transmitter and a humidity transmitter.

Weather Shade

External temperature, humidity and air quality sensors are affected by radiant heat from the surfaces of buildings and parking lots. The BAPI Weather Shade effectively blocks the radiant heat, improving the accuracy of the sensor.

(See Accessories for more info.)

List Price: \$125 + \$240 + \$12 = \$377

Your Number: BA/

Features & Options

- 4 to 20mA Temperature Output over a 40 to 120°F (4.5 to 49°C) Range
- 4 to 20mA Humidity Output over a 20 to 90%RH Range
- NIST Certified Temperature at 75°F (23.9°C)
- NIST Certified Humidity at 40%RH@75°F (23.9°C)
- Sensor Hangs from 12 feet (3.7m) of PVC-Jacketed Cable
- ±2%RH Humidity Accuracy
- ±0.54°F (0.3°C) Temperature Accuracy

BAPI's Pendant Temperature and Humidity Sensor features a BAPI-Box enclosure and 12 feet (3.7m) of PVC-jacketed cable. The temperature measurement has a 4 to 20mA output over a 40 to 120°F (4.5 to 49°C) range with an accuracy of ±0.54°F (0.3°C). The humidity measurement has a 4 to 20mA output over a 20 to 90%RH range.

BA/THP[40 TO 120F]-H220-12'

Pendant Temperature and Humidity Sensor.....\$715

Specifications

Power: 16 to 40 VDC, 40 mA max (20 mA/loop) DC

Humidity Sensor Type: Capacitive Polymer

Temperature Sensor Type:

1KΩ, 2 Wire Platinum RTD, 385 Curve

Humidity Output: 4 to 20mA over 20 to 90%RH Range

Temperature Output:

4 to 20mA over 40 to 120°F (4.5 to 49°C) Range

Humidity Drift: ±0.5%RH per year

Humidity Accuracy:

±2% (20 to 80%RH @ 77°F (25°C)), Non-condensing

±3% (80 to 90%RH @ 77°F (25°C)), Non-condensing

Temperature Accuracy: ±0.54°F (±0.3°C)

Output Impedance (Max Load/Loop):

700Ω @ 24VDC, Voltage drop is 10VDC

(Supply Voltage – 10VDC) / 0.02 Amps = Max load Impedance

Response Time: < 5 seconds in moving air

Environmental Operation Range:

Temperature: -40 to 158°F (-40 to 70°C)

Humidity: 0 to 95%RH, non-condensing

Fully Temperature Compensated

BAPI-Box Material: UV-resistant Polycarbonate, UL94 V-0

Agency: CE EN 61326-1:2013 EMC, RoHS

Rev. 05/02/24

(-5 to +5" WC or -1,250 to +1,250 Pascals)
(-1 to +1" WC or -250 to +250 Pascals)
- About 1/3rd the Size of Field Mount Pressure Sensors to Save Panel Space

- NIST Traceable Certificate Available at No Extra Charge
- Mounts in DIN Rail, Snaptrack or Directly to the Panel Backplane
- Display That Aids in Troubleshooting by Showing Pressure Over Entire Operational Range

EZ Pressure Sensor

Specifications

Power:

8 to 40 VDC* (4 to 20 mA Output)
7 to 40 VDC or 6 to 28 VAC (0 to 5 or 1 to 5 VDC Output)
12 to 40 VDC or 9 to 28 VAC (0 to 10 or 2 to 10 VDC Output)

Power Consumption:

20 mA max DC only at 4 to 20 mA Output
4.9 mA max DC at 0 to 5 or 0 to 10 VDC Output
0.12 VA max AC at 0 to 5 or 0 to 10 VDC Output

Load Resistance:

4 to 20 mA Output 850Ω Maximum @ 25 VDC
0 to 5, 1 to 5, 0 to 10, 2 to 10 VDC Output 6KΩ min.

Accuracy: ±0.25% FS at 77°F (25°C) for all units

Low Range: ±0.005" WC (±1.24 Pa)
Standard Range: ±0.025" WC (±6.22 Pa)

Total Error Band**:

Low Range: ±1.25% FS or ±0.025" WC (±6.22 Pa)
Standard Range: ±0.5% FS or ±0.05" WC (±12.44 Pa)

Temp Hysteresis & Stability:

Low Range: ±0.35% at 77°F (25°C) for 1000 Hours
Standard Range: ±0.25% at 77°F (25°C) for 1000 Hours

Overpressure:

Low Range: Proof 270" WC (67 kPa)
Standard Range: Proof 300" WC (74 kPa)

Field Selectable Outputs:

4 to 20 mA, 0 to 5 V, 1 to 5 V, 0 to 10 V, 2 to 10 V

Media: Clean, dry, non-corrosive gases

Wiring: 3 wires (2 wires for 4 to 20 mA output)

Env. Operating Range: 14 to 131°F (-10 to 55°C)

Storage Temp: -4 to 140°F (-20 to 60°C)

Humidity: 0 to 95% RH, non-condensing

Port Size: 3/16" barb (4.75mm)

Enclosure Material: ABS Plastic, UL94 V-0

Mounting: DIN Rail, Snaptrack or Surface

Agency: RoHS, CE EN 61326-1:2013 EMC

*The minimum input voltage for a 4 to 20 mA unit varies based on the load or input impedance of the controller it is connected to. See the instructions document for more information.

**Total Error Band is the typical accuracy within the compensated temperature range of 32 to 122°F (0 to 50°C). The Total Error Band covers non-linearity, hysteresis and thermal effect on span. This is only valid after the initial startup and auto-zero process has been performed.

OUTPUTS AVAILABLE

4 to 20 mA
0 to 5 V
0 to 10 V
2 to 10 V
1 to 5 V

Features & Options

- 10 Pressure Ranges and 5 Output Options
- Standard, Low and High Range Models
- Non-Flow-Through Sensor
- IP66-rated Enclosure with Hinged Cover
- NIST Certificate Available at No Extra Charge
- Outputs, Ranges & Units Easily Set Without Power
- Optional Display Aids in Troubleshooting by Showing the Actual Pressure Regardless of the Selected Range
- Three Pressure Status LEDs for "Line of Sight Troubleshooting"
- Simple Auto-Zeroing Process by Dead-Heading Low and High Ports and Pressing Auto-Zero Button

ZPM BAPI-Box

Specifications

Power:

7 to 40 VDC (4 to 20 mA Output)
 7 to 40 VDC or 18 to 32 VAC (0 to 5 or 1 to 5V Output)
 13 to 40 VDC or 18 to 32 VAC (0 to 10 or 2 to 10V Output)

Power Consumption:

20 mA max, DC only at 4 to 20 mA Output
 5.2 mA max DC at 0 to 5 or 0 to 10 VDC Output
 0.12 VA max AC at 0 to 5 or 0 to 10 VDC Output

Load Resistance:

4 to 20 mA Output: 850 Ω Maximum @ 24 VDC
 Voltage Output: 6K Ω Minimum

Accuracy: $\pm 0.25\%$ FS at 72°F (22°C)

Accuracy Low Range: $\pm 0.005"$ WC (± 1.24 Pa)
 Accuracy Standard Range: $\pm 0.025"$ WC (± 6.22 Pa)
 Accuracy High Range: $\pm 0.075"$ WC (± 18.66 Pa)

Total Error Band*:

Low Range: $\pm 1.25\%$ FS or $\pm 0.025"$ WC (± 6.22 Pa)
 Standard Range: $\pm 0.5\%$ FS or $\pm 0.05"$ WC (± 12.44 Pa)
 High Range: $\pm 0.5\%$ FS or $\pm 0.15"$ WC (± 37.33 Pa)

Temp Hysteresis & Stability (for 1,000 Hours):

Low Range: $\pm 0.35\%$ at 77°F (25°C)
 Standard & High Range: $\pm 0.25\%$ at 77°F (25°C)

Overpressure (Proof):

Low Range: 270" WC (67 kPa)
 Standard Range: 300" WC (74 kPa)
 High Range: 350" WC (87 kPa)

Media: Clean, dry, non-corrosive gases

Wiring: 3 wires (2 wires for 4 to 20mA output)

Field Selectable Outputs:

0 to 5, 1 to 5, 0 to 10 & 2 to 10V or 4 to 20 mA

Load Resistance:

4 to 20 mA Output: 850 Ω Max. @ 24 VDC
 Voltage Output: 6K Ω Minimum

Environmental Operating Range:

14 to 131°F (-10 to 55°C)

Storage Temp: -40 to 140°F (-20 to 60°C)

Humidity: 0 to 95% RH, non-condensing

Enclosure Material:

UV-resistant Polycarbonate, UL94 V-0

Enclosure Rating: IP66, NEMA 4

Port Size: 1/4" barb

Agency:

CE EN 61326-1:2013 EMC (Industrial Electromagnetic Environment), RoHS

*Total Error Band is the accuracy within the compensated temperature range of 32 to 122°F (0 to 50°C). The Total Error Band covers non-linearity, hysteresis and thermal effect on span. This is only valid after the initial startup and auto-zero process has been performed.

Static Pressure Probe Assembly

BAPI offers a Static Pressure Probe Assembly that includes the probe, rubber hose, built in surge damper, sheet metal screws and bulkhead fitting.

Part Number Description List Price

BA/ZPS-ACC07 ...Static Pressure Probe Assembly \$28

Features & Options

- Wall and Ceiling Ports That Are Economical & Easy to Install
- Includes 80 Micron Sintered SS Filter To Prevent Insects or Debris from Entering or Plugging the Tubing
- Accommodates 1/8" I.D. to 5/32" I.D. Tubing

- Modern BAPI-Stat "Quantum" Enclosure Style on Room Ports
- Low Profile "Button" Pickup Port That Is Smaller Than a Quarter in Size and Blends In With Its Surroundings

Wall Plate

Ceiling Mount Square Cover

Low Profile Port

BAPI-Stat "Quantum"
(Right unit shown with 60mm mounting base for European wall boxes. Unit is also available with a temp sensor.)

Specifications

Environmental Operating Range:

Wall & Ceiling Plates: 32 to 122°F (0 to 50°C) • 0% to 95% RH, non-condensing

Low Profile Port: -40 to 185°F (-40 to 85°C) • 0% to 100% RH, non-condensing

Material:

Quantum, Delta Style
& Low Profile:
ABS Plastic, UL 94, V-0

Features & Options

- Rooftop and Wall Mount or Vertical Mount for Building Soffits or Ceilings.
- Rugged, UV-Resistant and Flame-Retardant Plastic to Perform and Last Under Harsh Conditions
- Parallel Plate Design Reduces Fluctuations from Wind Gusts for More Stable Readings

REDUCING THE UNWANTED EFFECTS OF WIND GUSTS

Differences in building pressure are caused by the operation of supply fans or exhaust fans and usually measure less than 0.1 inches of water column (WC). A gentle breeze of 10 MPH provides a pressure of 0.048 inches WC, while a strong wind of 40 MPH provides 0.772 inches WC. A gale of 75 MPH can measure over 2.7 inches WC. The parallel plate design of BAPI's Outside Air Pickup Port significantly reduces these unwanted wind pressures for a stable and accurate reading at the pressure sensor and controller.

Specifications

Environmental Operation Range:

Temperature:
-40 to 212 °F
(-40 to 100 °C)

Humidity:
0% to 100% RH,
condensing

Wall & Ceiling Pressure Pickup Ports

Wallplates and BAPI-Stat "Quantum" Style units available as pressure pickups alone or as combination pressure pickup and temperature sensor

Room pressure pickup ports are available as a Wall Plate or a BAPI-Stat "Quantum" enclosure, both sized to fit a common 2" x 4" electrical box. A foam gasket seals the plate or enclosure to the wall. These units are available as a pickup alone or with a temperature sensor.

BAPI also offers a Ceiling Mount Square Cover that fits a standard 3/4" thick suspended ceiling tile, and a Low Profile Port that is ideal for locations where aesthetics are as important as the pressure measurement. The only visible portion is a flush 7/8" dot on the wall.

Overview

- Individual Static or Total Pressure Probes, or Probe Assemblies that Include Probe and Rubber Hose with Built-In Surge Damper
- Pitot Pressure Probe Assembly That Includes the Total Probe Assembly and the Static Probe Assembly
- Besides the probe assemblies (which includes all the components), many of the assembly components are available in smaller groupings.
- Barb Accommodates 1/8" ID to 5/32" ID Tubing
- Silicon Tubing on Probe Assemblies is 1/8" ID, 1/4" OD
- All Probe Assemblies Include a Built-In 5 Micron Surge Damper That Absorbs Rapid Pressure Fluctuations, Such As Those Caused By Opening and Closing of Doors

 **Surge Damper, 5 micron**
(ZPS-ACC15-10)

 **Static Probe Only, Zero Depth**
(ZPS-ACC22)

Features & Options

- Easy to Access Field Adjustable Setpoint from 0.1" to 40" WC (20 to 10,000 Pa)
- 5 Amp Silver Contacts, NO and NC
- Built-In Pressure Snubber for More Stable Readings

The BAPI Differential Pressure Switch is ideal for air filter monitoring, static pressure proving, airflow proving or auxiliary fan actuation.

The setpoint is field adjustable from 0.1" to 40" WC (20 to 10,000 Pa), and the unit can measure positive pressure, vacuum or true differential pressure. The six pressure ranges are field selectable by changing a color-coded spring. The spring for the range that you order is preinstalled, and the other five springs are shipped with the unit so that you can change ranges in the field if you choose.

The unit features a rugged plastic enclosure that protects the electrical terminations and pressure adjustment screw which is easily accessed through a port in the front cover using a square screwdriver bit (BA/SQ1BIT). The quick connect wiring terminations are accessed by opening the hinged cover. The unit is very compact and can be mounted directly on a flat surface with the rugged mounting feet.

The unit also features an extremely high proof pressure so that it will continue to function properly even if it is accidentally connected to an unusually high or low pressure.

Differential Pressure Switch

Specifications

Measurement Media:

Air, Combustion Gases

Operating Environment:

-40 to 185°F (-40 to 85°C)

5 to 95% RH non-condensing

Note: Not intended for outdoor use

Wall & Ceiling Pressure Pickup Ports

Wallplates and BAPI-Stat "Quantum" Style units available as pressure pickups alone or as combination pressure pickup and temperature sensor

Room pressure pickup ports are available as a Wall Plate or a BAPI-Stat "Quantum" enclosure, both sized to fit a common 2" x 4" electrical box. A foam gasket seals the plate or enclosure to the wall. These units are available as a pickup alone or with a temperature sensor.

BAPI also offers a Ceiling Mount Square Cover that fits a standard 3/4" (19mm) thick suspended ceiling tile, and a Low Profile Port that is ideal for locations where aesthetics are as important as the pressure measurement. The only visible portion is a flush 7/8" (22mm) dot on the wall.

Features & Options

- Designed for Monitoring Overpressure, Vacuum and Differential Pressure of Air or Other Non-Combustible, Non-Aggressive Gases
- Ideal for Air Filter and Fan Status Monitoring, Industrial Cooling-Air Circuit Monitoring, Duct Air Flow Monitoring, Air Flow Proving for Heater Control and Frost Prevention Circuits
- Field-Adjustable Dial to Select Any Trip Value Within Each Pressure Range

Total Probes and Tubing

Two static pressure probes and two meters of pressure tubing are available as an accessory.

Adjustable Pressure Switch

Specifications

Burst Pressure: 40" WC (10 kPa) for all pressure ranges

Medium: Air, non-combustible and non-aggressive gases

Operating Temperature: -4° to +185°F (-20 to +85°C)

Storage Temperature: -40°F to +185°F (-40 to +85°C)

Accuracy:

Deviation: $\pm 15\%$, min. ± 0.04 " WC (± 10 Pa) • Drift: $\pm 15\%$

Diaphragm Material:

Silicone, tempered at 392°F (200°C), free of gas emissions

Pressure Connections:

2 plastic pipe connection pieces, external dia. 0.24" (6mm)

Marked "+" to higher pressure, marked "-" to lower pressure

Body and Cover Material: UV-resistant plastic

Mechanical Working Life: Over 1,000,000 switching operations

Electrical Rating:

0.4A Inductive, 250 VAC • 1.5A Resistive, 250 VAC

0.8A Inductive, 125 VAC • 3.0A Resistive, 125 VAC

0.4A, 30VDC • 0.1A, 24 VDC

Electrical connections:

1/4" Spade Plug (AMP flat plug), 0.25" x 0.03" (6.3 x 0.8mm) in accordance with DIN 46244 or push-on screw terminals included

Protection Category: IP54 or IP65

Cable Conduit: M20 threads for 0.25" to 0.375" OD cable (6.5 to 9.5mm)

CE Conformity: Low Voltage Directive 2014/35/EU; RoHS Directive 2011/65/EU

Adjustable Pressure Switch

Air Quality Sensor White Papers & App. Notes

- BAPI offers VOC as Alternative to CO₂ for DCV, pg 29
- Using the VOC Sensor for DCV, pgs 30-33
- VOCs Detected by BAPI's VOC Sensor, pgs 34-35
- Effects of Temp & Altitude on CO₂ Measurement, pgs 36-37
- Calibration Methods for CO₂ Sensors, pg 38

Features & Options

- VOC Alone or Temperature and Humidity Combination
- Achieves True Indoor Air Quality, Not Just CO₂ Dilution
- Output is Correlated to a CO₂ Value Allowing You to Ventilate Using ASHRAE's CO₂-Based VRP Algorithm

Humans respire Volatile Organic Compounds (VOCs) as well as CO₂. The BAPI sensor is able to measure these VOCs and indicate when a space is occupied just as well as a CO₂ sensor.

The advantage of the VOC sensor is that it measures air contaminants from other sources besides respiration, such as building materials, cleaners, perfumes and furniture and carpet off-gassing. So using this sensor for Demand Controlled Ventilation is a way of achieving true indoor air quality, rather than CO₂ dilution.

A further benefit is that it requires no additional work on your part. That's because the sensor converts the VOC reading to a CO₂ equivalent level. This lets you use ASHRAE's CO₂-based VRP schedule to ventilate.

The unit is available as VOC alone or with temp and humidity sensing, temp setpoint and override. The optional display alternates between the measured values. The VOC level is indicated as "Good, Fair or Poor" by LEDs on the front of the unit. A 60mm mounting base is also available to fit European style junction boxes.

Specifications

Power:

15 to 24 VAC, 15 to 40 VDC
4.8 VA @ 24 VAC
40 mA @ 24 VDC

Sensing Elements:

Humidity: Capacitive Polymer, ±2% RH Accuracy
VOCs: Micro-machined Metal Oxide

Temp Sensor: Thermistor or RTD

Mounting: Standard 2"x4" junction box, European junction box or drywall mount (screws provided)

VOC Detection Range: 400 to 2,000 CO₂ ppm equivalent

Response Time: Less Than 60 Sec. (after Start-Up Time)

Operating Environment:

32 to 122°F (0 to 50°C) • 0 to 95% RH non-condensing

Material: ABS Plastic, Material Rated UL94 V-0

Start-Up Time: 15 minutes

Cover LED VOC/CO₂ Equivalent Level:

Good, Green < 1,000 ppm
Fair, Yellow = 1,000 to 1,500 ppm
Poor, Red > 1,500 ppm

Agency: RoHS

Warranty Period: 5 years

Features & Options

- Available with a CO₂ Equivalent Output (CO₂e) or a Total VOC Output (TVOC)
- Field-Selectable 0 to 5 or 0 to 10 VDC Output

The quality of the air that we breathe is essential to our health and knowing the air quality level is the first step to improving it. BAPI's VOC sensors provide that critical air quality information.

The CO₂ equivalent (CO₂e) units combine the benefits of VOC sensors and the common application of CO₂ sensors into one unit. It provides a VOC reading that correlates to a typical indoor CO₂ level of 400 to 2,000 ppm. This allows the sensor's output to be used for ASHRAE's CO₂-based VRP ventilation schedule.

The total VOC (TVOC) units provide a VOC reading that is the total concentration of all VOCs present in the space within a range of 0 to 2,500 ppb. This is often needed to meet 3rd party building certifications that require separate CO₂ and VOC readings.

Additional information on VOCs and using the CO₂e units in your ventilation strategy is available in the "Application Notes" section of the BAPI website.

A 60mm mounting base is available to fit European style junction boxes.

Specifications

Power: (Half-wave rectified)

12 to 24 VDC, 35 mA max • 18 to 24 VAC, 4 VAm_{ax}

CO₂e Unit Detection Range: 400 to 2,000 ppm CO₂ equivalent

TVOC Unit Detection Range: 0 to 2,500 ppb

Sensing Element: Micro-machined metal oxide

Start-Up Time: 15 minutes

Response Time: <60 sec (after start-up time)

Cover LEDs for CO₂e Models (not available on TVOC Models):

Good, Green < 1,000 ppm

Fair, Yellow = 1,000 to 1,500 ppm

Poor, Red > 1,500 ppm

Selectable Output: 0 to 5 or 0 to 10 VDC > 4KΩ impedance

Wiring: 3 wires, 16 to 22 AWG

Operating Environment:

32 to 122°F (0 to 50°C)

5 to 95%RH non-condensing

Enclosure Material: ABS plastic, UL94 V-0

Mounting: Standard 2"x4" junction box, European junction box or drywall (screws provided)

Features & Options

- Automatic Barometric Pressure Compensation for Accurate Readings Regardless of Weather or Altitude
- Optional Temperature, Setpoint, Override and Humidity
- Optimized for Continuously Occupied Areas
- Models that Meet California Title 24 and AB 841
- 0 to 2,500 ppm Range Models Meet Addendum ab to ASHRAE Standard 62.1-2022

The BAPI CO₂ Sensor is an accurate and reliable way of incorporating demand controlled ventilation into a building's HVAC strategy. It measures the CO₂ in ranges of 0 to 2,000 or 0 to 2,500 ppm with a field selectable output of 0 to 5 or 0 to 10 VDC.

BAPI's Dual Channel “24/7” unit has been optimized for continuously occupied areas and features a 3-point calibration process for enhanced accuracy and stability.

Barometric pressure changes can affect CO₂ sensors, even putting them outside of their specified accuracy. The BAPI unit has a built-in Barometric pressure sensor that continuously compensates the output for accurate readings despite the weather or altitude.

The CO₂ level is indicated by three LEDs on the front of the unit. A 60mm mounting base is available to fit European style junction boxes.

Features & Options

- Automatic Barometric Pressure and Temperature Compensation
- Optimized for Continuously Occupied Areas
- 0 to 2,500 ppm Range Models Meet Addendum ab to ASHRAE Standard 62.1-2022

The BAPI-Stat “Quantum” CO₂ Sensor is an accurate and reliable way of incorporating demand controlled ventilation. It measures the CO₂ in ranges of 0 to 2,000, 0 to 2,500, 0 to 5,000, 0 to 10,000 and 0 to 50,000 ppm with a field selectable output of 0 to 5 or 0 to 10 VDC.

BAPI's Dual Channel “24/7” unit has been optimized for continuously occupied areas and features a three-point calibration process for enhanced stability, accuracy and reliability.

Barometric pressure changes can affect the output of CO₂ sensors, even putting them outside of their specified accuracy. The BAPI unit has a built-in Barometric sensor that continuously compensates the output for accurate readings despite the weather or altitude.

The 0 to 2,000 and 0 to 2,500 ppm units include CO₂ level indication by three LEDs on the front of the unit. A 60mm mounting base is also available to fit European style junction boxes.

**BAPI-Stat “Quantum”
CO₂ Sensors**

(Right unit shown w/ optional
60mm mounting base)

Specifications

Power: 12 to 24 VDC, 240 mA • 18 to 24 VAC, 12 VA Peak

CO₂ Sensing Element: Dual Channel Non-Dispersive Infrared (NDIR)

Field Selectable Output: 0 to 5 or 0 to 10 VDC >4KΩ impedance

Termination: 3 Terminals, 16 to 22 AWG

Operating Environment:

32 to 122°F (0 to 50°C) • 0 to 95%RH non-condensing

Enclosure Material: ABS Plastic, Material Rated UL94 V-0

CO₂ Detection Range (ppm):

0 to 2,000, 0 to 2,500, 0 to 5,000, 0 to 10,000 and 0 to 50,000

Start-Up Time: <2 Minutes

Response Time:

<2 Minutes for 90% step change typical (after start-up)

Mounting: U.S. or European junction boxes or drywall mount

CO₂ Accuracy @ 77°F (25°C) and Sea Level:

0 to 2,000, 2,500 & 5,000 ppm Models:

<±(50 ppm +3% of measured value)

<±75 ppm at 600, 1,000 and 2,500 ppm

0 to 10,000 ppm Models: <±(100 ppm +5% of measured value)

0 to 50,000 ppm Models: <±75 ppm or 10% of reading
(whichever is greater)

CO₂ Drift Stability:

0 to 2,000, 2,500 and 5,000 ppm Models: ±20 ppm per year

0 to 10,000 ppm Models: ±20 ppm per year

0 to 50,000 ppm Models: <5% of FS (over 10 years)
or <10% of reading annual

LED CO₂ Level Indicator (for 0 to 2,000 or 2,500 ppm units only):

Good <1,000 ppm • Fair =1,000 to 1,500 ppm • Poor >1,500 ppm

Agency: RoHS, CE, Title 24 Requirements,

Features & Options

- Automatic Air Pressure and Temperature Compensation
- Optimized for Continuously Occupied Areas
- 0 to 2,500 ppm Range Models Meet Addendum ab to ASHRAE Standard 62.1-2022

The BAPI CO₂ Duct Sensor is an accurate and reliable way of incorporating demand controlled ventilation. It measures CO₂ in ranges of 0 to 2,000, 0 to 2,500, 0 to 5,000, 0 to 10,000 and 0 to 50,000 ppm with a field selectable output of 0 to 5 or 0 to 10 VDC.

BAPI's Dual Channel "24/7" unit is optimized for continuously occupied areas and features a 3-point calibration process for enhanced accuracy and reliability.

Altitude and weather patterns can affect CO₂ sensors, even putting them outside of their specified accuracy. The BAPI unit has a built-in Barometric pressure sensor that continuously compensates the output for accurate readings despite the weather or altitude.

The Duct unit samples air using an aspiration tube. The Rough Service unit features a ventilated BAPI-Box and is ideal for areas such as outdoor air plenums, equipment rooms, green houses and warehouses. The 0 to 2,000 and 0 to 2,500 ppm units include CO₂ level indication by three LEDs on the front of the unit.

Features & Options

- 0 to 40 ppm CO Measurement Range
- 30 ppm CO Relay Trip Level with Audible Alarm
- Field Selectable 0 to 5V, 0 to 10V or 4 to 20mA Output
- BAPI-Stat "Quantum" with LED Status Indication
- Automatic Barometric Pressure Compensation

The BAPI-Stat "Quantum" Carbon Monoxide Sensor features a modern enclosure style with green/red status LED. It has a 0 to 40 ppm CO measurement range with a 30 ppm relay/audible alarm trip level. The relay is field selectable for normally closed or normally open, and the CO output level is field selectable for 0 to 5V, 0 to 10V or 4 to 20mA.

The green/red LED indicates unit status of normal, alarm, trouble/service or test. The side pushbutton places the unit into test status to verify audible alarm and LED operation. The sensing element has a typical life of 7 years.

CO Sensor in a BAPI-Stat "Quantum" Enclosure

(Bottom unit shown w/ optional 60mm mounting base)

Specifications

Power Supply: 24 VAC/VDC $\pm 10\%$, 1.0 VA Max

CO Sensor Technology: Electrochemical

CO Detection Range: 0 to 40 ppm

CO Accuracy: $\pm 3\%$ of Full Scale

Jumper Selectable Analog Output:
or 4 to 20mA, 0 to 5VDC or 0 to 10VDC

Relay Trip Point: 30 ppm

Relay Output: Form "C", 0.1A-30VDC, Normally Closed (NC) and Normally Open (NO) contacts

Audible Alarm: 75 dB at 10 feet

Start-Up Time: <10 Minutes

Response Time: < 5 Min (after Start-Up Time)

Termination: 6 Terminals, 16 to 22 AWG

Environmental Operating Range:

40 to 100°F (4.4 to 37.8°C)

0 to 95%RH non-condensing

Altimeter: Mechanical

LED Behavior:

Red/Green LED indicates the unit status of Normal, Alarm, Trouble/Service or Test.

Encl. Material & Rating: ABS Plastic, UL94 V-0

Mounting: 2"x4" J-Box or drywall, screws provided

Sensing Element Life: 7 years typical

Certifications: RoHS

Warranty Period: 5 years

Features & Options

- Field Replaceable Electrochemical Sensor with Self-Test
- Field Selectable Ranges and Outputs
- Large Display and Two Independent Alarm Contacts
- Certificate of Calibration Included with Sensors and Replacement Modules

BAPI's Carbon Monoxide Sensor offers enhanced electrochemical sensing with outstanding accuracy at low concentrations. The Duct unit samples duct air using an aspiration tube. The Rough Service unit features a ventilated BAPI-Box and is ideal for parking ramps, equipment rooms and warehouses.

The sensor has field selectable CO ranges of 0 to 100, 0 to 200, 0 to 300 and 0 to 500 ppm. It also has field selectable outputs of 0 to 5, 1 to 5, 0 to 10, 2 to 10 VDC and 3-wire 4 to 20 mA output. The large LCD is backlit for 10 seconds after any button push.

Two independent SPDT alarm contacts switch at field selectable CO concentrations of 25, 35, 50, 100 and 200 ppm. An alarm timer can hold the output relays on for one to ten minutes after the CO level has fallen below 80% of setpoint. This allows additional fan run time to be sure that the CO has been purged.

The field replaceable sensor element lasts approximately 7 years and is self tested daily.

Features & Options

- Several options for Temperature, Humidity, Carbon Monoxide (CO) and Nitrogen Dioxide (NO₂)
- Field configurable BACnet MS/TP and MODBUS RTU output
- CO measurement range of 0 to 500 ppm
- NO₂ measurement range of 0 to 20 ppm
- CO and NO₂ sensing elements last approximately 7 years and are automatically self-tested daily
- Electronic copies of CO and NO₂ certificates of calibration available upon request at no extra charge
- Rough service wall/beam mount or duct mount – perfect for parking structures, equipment rooms or warehouses.

Rough Service

Duct Mount

Rough Service with Temp and %RH

5 YEAR WARRANTY

Specifications

Power: 15 to 40VDC, 35mA max | 18 to 24VAC, 2.7VA max

Field Wiring Terminal Blocks: 18 to 24 AWG

Environmental Operation Range:

-4 to 104°F (-20 to 40°C) | 15 to 95%RH Non-condensing

Enclosure Material: UV-resistant Polycarbonate, UL94 V-0

CO and NO₂ Sensor Element Life: 7 years typical

Agency: RoHS

CO Sensor:

Type: Electrochemical

Range: 0 to 500 ppm

Accuracy: ±6 ppm from 0 to 200 ppm | ±25 ppm from 200 to 500 ppm

NO₂ Sensor:

Type: Electrochemical

Range: 0 to 20 ppm

Accuracy: ±0.5 ppm from 0 to 10 ppm

Temperature Sensor:

Range: -40 to 158°F (-40 to 70°C)

Accuracy: ±0.54°F (±0.3°C) from 68 to 104°F (20 to 40°C) [see graph]

Humidity Sensor:

Range: 0 to 100%RH

Accuracy: ±2%RH from 20 to 80% @ 25°C

Duct Mount
(Dimensions are the same for the rough service unit without the aspiration tube)

Note: CO and/or NO₂ sensors must be installed and powered within 4 months of purchase to prevent loss of accuracy.

Features & Options

- Field Selectable Particulate Size of PM1.0, PM2.5 and PM10
- Field Selectable Outputs of 0 to 5V, 0 to 10V and 4 to 20mA
- Laser-based, light scattering particle sensing with 10 year expected lifetime.

The BAPI-Stat "Quantum" Particulate Sensor is an accurate and reliable way of continuously monitoring the concentration of particles in a room. Laser-based sensors provide the highest accuracy for commercial applications and will measure particle concentrations from 0 to 1,000 $\mu\text{g}/\text{m}^3$. A 60mm mounting base is available to fit European style junction boxes.

Features & Options

- Detects Most Modern Refrigerants
- Area Monitoring for Leaks and Spills
- Provides a Voltage Output
- Rough Service or Duct Models

The BAPI Duct and Rough Service Refrigerant Leak Detectors sense a wide range of refrigerants. The sensor is temperature compensated for improved detection of leaks and spills. The output voltage increases as the concentration of the refrigerant increases in the space.

These units are not intended for critical ppm measurements nor life safety applications.

CO₂ Sensor Calibration Kit

E27

Air Quality Sensors

Features & Options

- Calibrates and verifies proper operation of specified BAPI CO₂ Room and Duct Sensors¹

BAPI's CO₂ Sensor Calibration Kit verifies the proper operation and calibrates all of BAPI's room and duct CO₂ sensors. Two calibration gas concentrations are required to perform a complete calibration². Purchase the single point gas at a CO₂ concentration of 400 to 800 ppm, and the span gas at 1,000 to 1,200 ppm. Only one regulator is required because it can be swapped between gas cylinders.

BAPI's CO₂ Sensor Calibration Kit consists of the following:

- A communications cable that connects a computer to the BAPI CO₂ sensor³
- A funnel used as a gas shroud
- A length of tubing to connect the funnel to the test gases
- Rubber bands to secure the funnel to the BAPI CO₂ sensor
- Shunt jumpers to place the BAPI CO₂ sensor into test mode

Notes

¹Specified BAPI CO₂ sensors available for calibration can be located on our Application Note linked here:

https://www.bapihvac.com/application_note/calibration-methods-for-single-and-dual-channel-co2-sensors-application-note/

²A single point gas may not be required. If the ambient CO₂ concentration is known, stays stable at ± 10 ppm for at least 10 minutes and is in the range of 350 to 800 ppm, you may perform the single point accuracy check & calibration without any test gas.

³The test software must be downloaded from the BAPI CO₂ Sensor Calibration Kit webpage at:

<https://www.bapihvac.com/product/co2-sensor-calibration-kit/>

CO₂ Sensor Calibration Kit

CO₂ Sensor Calibration Kit with Optional Case (shown with customer supplied gas cylinders)

VOC Sensor Verification Kit

Overview

The VOC Sensor Verification Kit allows a known VOC sample to be generated and applied to a BAPI room or duct VOC sensor. The sample tests the dynamic range of the sensor to see if the sensor element is working correctly.

The kit consists of a plastic bottle and a 60mL syringe and a comprehensive set of instructions. The customer has to supply 70% minimum Isopropyl Alcohol.

BAPI VOC Sensor is a Reliable Alternative to CO₂ for Demand Controlled Ventilation

Most system designers use CO₂ sensors as part of their Demand Controlled Ventilation strategy. One drawback with this method is that it ignores the harmful contaminants and other VOCs that may be present in the air even when the CO₂ levels are low. That's why replacing the CO₂ sensor with a VOC sensor is becoming more prevalent within the HVAC industry, and why BAPI recommends using our VOC sensors instead of CO₂.

Because ASHRAE has not written a ventilation procedure as yet for VOCs, BAPI's VOC sensor output is correlated to a CO₂ level of 0 to 2,000 ppm, allowing the use of ASHRAE's CO₂-based ventilation procedure.

But will this correlated output allow for increased ventilation when people are in the room the same as a CO₂ sensor? The answer is yes.

The reason for this is that a large share of VOCs in an indoor space are generated by the people in the room. (See Table 1) The VOCs come from our breath, sweat and skin or from colognes, perfumes and fabric softeners and other chemicals on our skin and clothes. So the VOCs in an occupied space will build up just like the CO₂.

Extensive research was conducted on occupancy and VOC/CO₂ levels in 1,500 offices, schools and homes to determine the relationship between these three factors. The research identified a complex correlation algorithm between VOCs and CO₂, and this algorithm is used to create the correlated output of BAPI's

Graph showing the VOC and CO₂ levels in a school multi-purpose cafeteria during a typical school day.

VOC sensor. The accuracy of this output as compared to actual CO₂ levels is shown in the chart above.

The chart shows that the VOC sensor tracks with the CO₂ sensor except when additional VOCs are being generated besides those generated by the people. These include the cooking VOCs at breakfast and lunch and the sweat VOCs from the student exercise class.

Although the cooking and sweat odors are not harmful to human health, odors – especially unpleasant ones – have a negative effect on student and employee productivity so the additional ventilation the VOC

sensor allows during these times is a good strategy. And when the VOCs are not from odors, but from some of the hundreds of VOCs in indoor air that are harmful to human health, then the extra ventilation the VOC sensor allows is doubly important.

Table 1 – Typical Indoor Contaminants (VOCs) and Their Source		
Contamination Source	Emission Source	VOC
Human Being	Breath	Acetone, Ethanol, Isoprene, CO ₂
	Skin Respiration & Perspiration	Nonanal, Decanal, alpha-Pinene
	Flatulence	Methane, Hydrogen,
	Cosmetics	Limonene, Eucalyptol
Consumer Products	Household Supplies	Alcohols, Esters, Limonene
Office Equipment	Printers, Copiers, Computers	Benzene, Styrene, Phonole
Combustion	Engines, Appliances, Smoke	Unburnt Hydrocarbons, CO, CO ₂
Building Materials	Paints, Adhesives, Carpets	Formaldehyde, Alkanes, Aldehydes, Ketones
Furniture	Poly Vinyl Chloride (PVC)	Toluene, Xylene, Decane

More information on BAPI's VOC sensors is available on our website at www.bapihvac.com

Using BAPI's Volatile Organic Compound Sensor for Demand Controlled Ventilation

Rev. 11/11/24

This paper will show how BAPI's Volatile Organic Compound (VOC) sensor is an accurate, reliable and beneficial way of incorporating Demand-Controlled Ventilation into a building's HVAC strategy.

Ventilating by VOCs vs CO₂

Let's begin a brief overview of what VOCs are and where they come from. VOCs are chemicals that contain carbon and that evaporate into gases at typical room temperature and pressure. Table 1 shows some typical indoor contaminants and their sources. Some VOCs are harmful to human health and some are not, while some have a smell and some do not.

Rather than VOC levels, most system designers use CO₂ levels for their Demand-Controlled Ventilation (DCV) strategy as outlined in the Ventilation Rate Procedure of ASHRAE Standard 62.1. This procedure allows for reduced ventilation rates in unoccupied

Contamination Source	Emission Source	VOC
Human Being	Breath	Acetone, Ethanol, Isoprene, CO ₂
	Skin Respiration & Perspiration	Nonanal, Decanal, alpha-Pinene
	Flatulence	Methane, Hydrogen,
	Cosmetics	Limonene, Eucalyptol
Consumer Products	Household Supplies	Alcohols, Esters, Limonene
Office Equipment	Printers, Copiers, Computers	Benzene, Styrene, Phonole
Combustion	Engines, Appliances, Smoke	Unburnt Hydrocarbons, CO, CO ₂
Building Materials	Paints, Adhesives, Carpets	Formaldehyde, Alkanes, Aldehydes, Ketones
Furniture	Poly Vinyl Chloride (PVC)	Toluene, Xylene, Decane

or minimally occupied rooms to save on heating and cooling costs. The occupancy of the room is determined by CO₂ sensors because people breath out more CO₂ than they breath in, therefore the CO₂ level in a room with minimal ventilation will build up in direct relation to the number of people in it. When the CO₂ level rises, additional ventilation is brought in to keep it at an acceptable level.

One drawback with this CO₂ method is that it ignores the amount of harmful VOCs that may be present in the air even when the CO₂ level is being kept at an acceptable level. That's why replacing the CO₂ sensor with a VOC sensor is becoming more prevalent within the HVAC industry, and why BAPI recommends using our VOC sensors instead of CO₂.

Because ASHRAE has not written a ventilation procedure as yet for VOCs, BAPI's VOC sensor output is correlated to a CO₂ level of 0 to 2,000 ppm, allowing the use of ASHRAE's CO₂-based procedure. But will the VOC sensor's correlated output allow for increased ventilation when people are in the room the same as a CO₂ sensor? The answer is yes.

The reason is that a large share of VOCs in an indoor space are generated by the people in the room. Table 1 shows that VOCs come from our breath, sweat and skin or from colognes, perfumes and fabric softeners and other chemicals on our skin and clothes. Because so many VOCs come from people, the VOCs in an occupied space will build up just like the CO₂. What this looks like in the real world is shown in the following charts comparing the actual CO₂ and VOC levels in a multi-purpose space.

VOC vs CO₂ Levels in a Multi-Purpose Space

Extensive research was conducted on occupancy and VOC/CO₂ levels in 1,500 offices, schools and homes to determine the relationship between these three factors. The research identified a complex correlation algorithm between VOCs and CO₂, and this algorithm is used to create the correlated output of BAPI's VOC sensor. The accuracy of this output as compared to CO₂ levels is shown in the following six charts.

These charts were taken over the course of a typical week in a cafetorium area of a public school in Wisconsin using side-by-side VOC and CO₂ sensors. The cafetorium is a true multi-purpose area. It is used for breakfast, morning snacks, lunch, and after school studies during the day, and athletic practices, exercise classes and occasional meetings in the evenings.

The six charts show that the VOC sensor tracks with the CO₂ sensor except when additional VOCs are being generated over and above those generated by the people. The HVAC system in the school is using the VOC sensor output to provide the additional ventilation needed when the VOCs are high. Because these VOCs are invisible to the CO₂ sensor, the VOC levels would remain high for much longer if the CO₂ sensor was being used by the HVAC system rather than the VOC sensor.

Using BAPI's Volatile Organic Compound Sensor for Demand Controlled Ventilation

E31

MONDAY:

At 7 am, the VOC sensor picks up the breakfast cooking aromas/VOCs. The CO₂ sensor climbs a short time later as the students arrive to eat. The VOC sensor has slightly higher readings than the CO₂ sensor during breakfast and the morning breaks because the VOCs from the food are added to the VOCs generated by the people. This is also seen at lunch as cooking of the sausage pizza generated lots of VOCs which are added to the VOCs from the students and staff.

Interestingly there is a parent meeting in the room at 6 pm. Notice how the VOCs track slightly above the CO₂ during this time but slightly below during the "After School Studies" period. That's because it's mostly adults in the space during the "Parent Meeting" and mostly kids in the "After School Studies". Since adults typically use more perfumes and colognes than kids, and therefore generate more VOCs than kids, the correlation algorithm for the VOC sensor is slightly high during the "Parent Meeting" and slightly low during the "After School Studies". But whether the VOC sensor tracks slightly high or slightly low, the chart shows that the VOC sensor output directly correlates to the occupancy in the space and that using the VOC sensor output would result in appropriate ventilation.

TUESDAY:

There are again increases in VOCs and CO₂ during breakfast, morning breaks, lunch and after school studies.

There is a small spike in VOCs at about 5:45 due to Pee Wee wrestling practice which takes place in a performance area just across the hall from 6 to 8 pm. The dining room is used as a rest area for parents and as a place for the wrestlers to store their gym bags during practice, which accounts for the increase in VOCs at that time.

WEDNESDAY:

The daytime portion of Wednesday is similar to Monday and Tuesday with increases in VOCs and CO₂ during breakfast, morning breaks and after school studies, and spikes in VOCs due to cooking at lunch.

There is a large spike in VOCs at about 4:45 pm due to a general exercise class for students. People generate more VOCs from sweat when they're exercising, and the students also brought in gym bags and put on exercise clothing which added to the VOCs at that time.

Using BAPI's Volatile Organic Compound Sensor for Demand Controlled Ventilation

THURSDAY:

The daytime portion of Thursday is similar to the rest of the week with increases in VOCs and CO₂ during breakfast, morning breaks and after school studies, and spikes in VOCs due to cooking at lunch.

There is an increase in VOCs at 6 pm (similar to Tuesday) due to the Pee Wee wrestling practice in the performance area across the hall. There is another increase in VOCs at 8 to 10 pm due to a parents meeting for the wrestlers in the dining area at that time.

FRIDAY:

The daytime portion of Friday is similar to the rest of the week with increases in VOCs and CO₂ during breakfast, morning breaks and after school studies, and spikes in VOCs due to cooking at lunch.

There is an increase in VOCs from 6:30 to 8:30 pm due to general student traffic in the area from an athletic event in another part of the school building.

SATURDAY:

The space is considered unoccupied on Saturday so the BMS schedule has the space receiving only the minimum background ventilation regardless of the readings from the sensors.

However, VOCs are being generated in the dining room from about 8 am to noon due to a Pee Wee Wrestling Tournament in the performance center across the hall. Wrestlers store their gym bags and other belongings in the dining area during the tournament, which accounts for the VOCs during that time.

Although the VOCs are mainly from sweat odors in this case, the chart would look the same if the VOCs were from potentially harmful sources such as cleaning chemicals or flour strippers. These VOCs would be invisible to the CO₂ sensor so they would not be diluted by additional ventilation.

SUNDAY: (NO CHART)

Sunday is the only day with no activity in the kitchen and dining area or the surrounding spaces, so there is only background levels of VOCs and CO₂ throughout the day.

Using BAPI's Volatile Organic Compound Sensor for Demand Controlled Ventilation

The Health and Financial Benefits of Low VOCs

Some VOCs cause irritation to the eyes, nose and throat, as well as headaches, drowsiness, dizziness, nausea and fatigue. Other VOCs are known to cause diseases such as cancer. But the importance of detecting and diluting VOCs goes beyond the health concerns. It's also about productivity and cognitive function.

Although the cooking and sweat odors in the cafetorium charts are not harmful to human health, unpleasant odors – such as burnt microwave popcorn or a stale tuna fish sandwich in a garbage basket – can bring all student productivity to a halt. And the effect is the same in a typical business setting so the additional ventilation to dilute the odors is a good strategy for both schools and businesses.

Besides productivity, a recent study by Harvard, Syracuse and SUNY universities found that VOCs – even in the levels that are typically found in a conventional building – can have a major effect on cognitive abilities.

The study found that on average, cognitive scores were 61% higher on “Low” VOC days versus “Typical” VOC days. And of the nine cognitive areas tested, the largest effects were seen for Crisis Response, Information Usage and Strategy – all of which are indicators of higher level cognitive function and decision making. Specifically the Crisis Response, Information Usage and Strategy scores were 97%, 172% and 183% higher respectively on “Low” VOC days versus “Typical” VOC days.

Another area of the study focused on the financial impact to businesses of ventilating for low VOCs vs typical VOCs. Rather than increased cost, the study found the opposite.

On average, employee salaries account for 90% of the expenses of a typical business, compared to just 10% for utilities, maintenance and mortgage/rent. Because of the low utility costs compared to salaries, the study found that an increase in energy costs of \$14 to \$40 per person per year to achieve the low VOCs would result in as much as \$6,500 in increased productivity per person per year.

According to the principal investigator for study, Dr. Joseph Allen, the study suggests that the health and productivity benefits far outweigh the slightly increased energy costs.

“It is time we move away from ventilation designed for merely acceptable indoor air quality and move towards design for optimal indoor air quality,” Dr. Allen said. “We have been presented with the false choice of energy efficiency or healthy indoor environments for too long. We can – and must – have both.”

Depending on the source of the information, 5,000 to 10,000 unique Volatile Organic Compounds (VOCs) exist. BAPI's VOC sensor reacts to all of them.

VOCs are chemicals that contain carbon and have boiling points below 100°C. Most can be vapors at room temperature. In their liquid form many VOCs can contaminate ground water.

Families of VOCs detected are:

- CO, CH₄, LPG
- Alcohols
- Ketones. Ketones are solvents. The best known are Acetone and Methyl Ethyl Ketone or MEK.
- Organic Acids. Common organic acids are Lactic acid, Acetic acid, Formic acid, Citric acid and Oxalic acid
- Amines. Amines are derivatives of ammonia.
Wikipedia lists 175 compounds as amines, <http://en.wikipedia.org/wiki/Category:Amines>
- Aliphatic Hydrocarbons. Aliphatic hydrocarbons are flammable hydrocarbons with little or no odor. Examples are hexane, paraffin, methane and acetylene.
- Aromatic Hydrocarbons. Aromatic hydrocarbons are flammable hydrocarbons with a discernable odor. Examples are benzene, furan, pyridine, toluene, asphaltene and picric acid.

A list of some of the most common VOCs and their sources follows.

<u>VOC</u>	<u>Source</u>
1-hexene.....	Human metabolism
1-isocyanobutane	Coatings
1,1,1-trichloroethane.....	Ink, Paint, Photo-resist, Photographic film
1,4-dioxane.....	Spot removers
2-bromopentane	Prescription drugs
(2-methylcyclohexyl) propanedinitrile ...	Human metabolism
2,2-dimethylbutane	Human metabolism
2,3,3-trimethylpentane.....	Human metabolism
2,3-dimethylpentane	Human metabolism
2,3,4-trimethylpentane.....	Human metabolism
3-methylhexane.....	Human metabolism
3,4-dimethyl-1-pentene.....	Human metabolism
4-methyl-1-pentene	Human metabolism
5-methyl-1-hexene.....	Human metabolism
6-methyl-1-heptanol.....	Human metabolism
Acetaldehyde.....	Disinfectants, Adhesives, Coatings, Plastics, Lubricants, Ripening of fruit
Acetic acid esters	Surface cleaners
Acetone	Polyester resins, Vinyl, Adhesives, Human metabolism
bis-(1,1-dimethylethyl)nitroxide.....	Human metabolism
Benzene	Plastics, Building materials, Furniture, Office equipment
Butoxyethanol.....	Surface cleaners
Butyl acetate.....	Surface cleaners
C6 - C10 substituted alkanes	Cleaners, Polishers
Carbon Monoxide	Automobile exhaust, Fuel based heating, Cooking appliances, Smoking
Decanal	Artificial flavors, Perfume, Human metabolism
Dichlorobenzene.....	Deodorizers

Common Volatile Organic Compounds Detected by BAPI's VOC Sensor

E35

A list of some of the most common VOCs and their sources follows, continued from previous page...

<u>VOC</u>	<u>Source</u>
Dipropylene glycol	Surface cleaners
Ethanol	Disinfectants, Human metabolism
Ethyl Alcohol	Cosmetics, Cleaners, Disinfectants, Detergents, Paints, Human Metabolism
Eucalyptol	Cosmetics, Artificial flavors, Insecticides
Formaldehyde.....	Biocides, Disinfectants
Heptane	Human metabolism
Hydrocarbons	Waxes, Polishes
Isobutane.....	Aerosol cleaners
Isobutene.....	Aerosol cleaners
Isoprene.....	Synthetic rubber, Human metabolism
Limonene.....	Cosmetics, Cleaners, Artificial flavors, Prescription drugs
Methane.....	Natural gas, Human metabolism
Methoxyethanol.....	Surface cleaners
Methoxyethoxyethanol.....	Surface cleaners
Methylcyclohexane	Human metabolism
Methylethylketone.....	Adhesives, coatings, Plastics, Lubricants
Methyl methacrylate	Hard surface cleaners
Naphthalene	Disinfectants, Repellants
Nonanal	Artificial flavors, Perfume, Human metabolism

Xylene.....	Plastics, Synthetic Rubber, Polyester clothing

Carbon Dioxide (CO₂) in air is normally measured in Parts Per Million (ppm). At 1,000 ppm CO₂, a volume of air containing one million air molecules would contain a mixture of 999,000 air molecules and 1,000 CO₂ molecules.

The volume of air necessary to contain one million air molecules is affected by air temperature and air pressure, also called Barometric Pressure. As the pressure decreases, the volume needed to contain one million air molecules increases. The opposite is true of temperature. As the temperature decreases, the volume of air needed to contain one million molecules decreases. Although the volume of air is affected by temperature and pressure, the concentration of CO₂ is not affected. If you started with 1,000 ppm of CO₂, then you finish with 1,000 ppm of CO₂ despite the changes in the air volume.

The most common CO₂ sensors are known by the engineering term Non-Dispersive InfraRed, or NDIR. An NDIR CO₂ sensor shines infrared light through a gas sample in a sample chamber. Sensitive photo-detectors measure the intensity of the infrared light after it passes through the gas sample. CO₂ molecules are opaque to 4.26 micron infrared light while the rest of the air molecules are not. So the intensity of the infrared light is diminished proportionally to the number of CO₂ molecules that are present. Measuring the resultant light intensity measures the number of CO₂ molecules present.

The size of the NDIR sampling chamber is fixed and is open to the atmosphere so that air can move in and out. As explained above, the number of air molecules in a given volume is affected by temperature and air pressure but not the concentration of CO₂. At low pressures or high temperatures, there will be fewer air molecules in the sample chamber, so there will also be fewer CO₂ molecules, even though the ppm of CO₂ hasn't changed. Fewer CO₂ molecules "fools" the sensor into thinking that the CO₂ concentration is lower than it really is. At high pressures or low temperatures, there are more air molecules in the sample chamber and more CO₂ molecules, even though the CO₂ concentration hasn't changed. More CO₂ molecules "fools" the sensor into thinking that the CO₂ concentration is higher than it really is. Therefore a CO₂ sensor calibration will only be accurate at one temperature and one air pressure.

Calculating Temperature and Barometric Pressure Effects on CO₂ Measurement

The following formula derived from the Ideal Gas Law relates changes in air volume to temperature, pressure and the number of molecules present:

$$\text{ppm CO}_2 \text{ corrected} = \text{ppm CO}_2 \text{ measured} * ((T_{\text{measured}} * p_{\text{ref}}) / (p_{\text{measured}} * T_{\text{ref}}))$$

- p_{measured} = Current pressure, in the same units as reference pressure (not corrected to sea level)

- T_{ref} = reference temperature, usually 25°C, 77°F, converted to absolute (298.15 for °C, 536.67 for °F)

- T_{measured} = Current absolute temperature, °C + 273.15, °F + 459.67

- p_{ref} = reference Barometric Pressure, usually sea level, 29.92 in Hg, 760mm Hg, 1013.207 hPa or 14.6959 psi

Table 1 uses the Ideal Gas Law formula above to show how the uncompensated CO₂ measurement would change with temperatures from 32 °F to 110 °F. Initial conditions are 1,000 ppm CO₂, 77°F and sea level Barometric Pressure. As seen in Table 1, the CO₂ concentration varies by 150 ppm.

Barometric Pressure is directly affected by altitude, and **Table 2** uses the Ideal Gas Law formula to show how the uncompensated CO₂ measurement would change with altitudes of -1,000 to 10,000 feet. Initial conditions are 77°F and 1,000 ppm CO₂ at sea level. As seen in Table 2, the CO₂ concentration varies by 349 ppm.

Table 1: CO₂ Measurement Change With Temperature

Temp. in °F	CO ₂ Measured in PPM	Temp. in °F	CO ₂ Measured in PPM	Temp. in °F	CO ₂ Measured in PPM
32	1092	60	1033	85	985
35	1085	65	1023	90	976

10000	20.58	688

The Effects of Temperature and Barometric Pressure on CO₂ Sensors

E37

Weather Effects on Barometric Pressure and CO₂ Measurement

Heat entering our atmosphere creates weather patterns, and these patterns affect the Barometric Pressure by forming high pressure systems and low pressure systems. Fast moving storms can dramatically change the atmospheric pressure and effective altitude in only a few minutes.

About 15 miles from BAPI's headquarters is an internet enabled weather station on the Mississippi River bluffs above the small town of DeSoto. Looking at historical data from that weather station from 2003 to 2011, the highest pressure, the lowest pressure and the biggest one-day pressure swing are shown in Table 3.

If the actual CO₂ level was 1,000 ppm at sea level, then Table 3 shows what the measured CO₂ concentration would be in DeSoto on those days. From January 15, 2005 until October 26, 2010, weather patterns alone changed the CO₂ measurement by 75 ppm, which is the entire accuracy specification for a typical NDIR CO₂ sensor.

On the single day of January 18, 2005, weather patterns changed the CO₂ measurement by 35 ppm, which is almost 50% of the specified accuracy specification of a typical NDIR CO₂ sensor.

Table 3: CO₂ Measurement Change with Weather Patterns

Date	Barometric Pressure in inches Hg	Measured CO ₂ in PPM
1/18/2005	30.71	1026
1/18/2005	29.64	991
1/15/2005	30.78	1029
10/26/2010	28.53	954

The Combined Effect of Temperature and Barometric Pressure on CO₂ Measurement

Temperature and Barometric Pressure affect CO₂ measurement individually as well as in combination. **Table 4** shows the measured CO₂ concentration for the range of Barometric Pressures recorded in DeSoto from 2005 to 2010 along with temperatures from 50 to 90°F.

If the actual CO₂ concentration was 1,000 ppm at 77°F and sea level, the measured CO₂ concentration would vary by 161 ppm across the various temperature and Barometric Pressure ranges. That variance is more than the specified accuracy of the NDIR CO₂ sensor.

Table 4: CO₂ Measurement Change with Temperature and Barometric Pressure Combined

		Barometric Pressure in Inches Hg						
		28.5	29	29.5	29.92	30	30.5	31
Temperature in °F	50	1003	1021	1038	1053	1056	1073	1091
	55	993	1011	1028	1043	1046	1063	1080
	60	984	1001	1018	1033	1035	1053	1070
	65	974	991	1009	1023	1026	1043	1060
	70	965	982	999	1013	1016	1033	1050
	75	956	973	990	1004	1006	1023	1040
	77	953	969	986	1000	1003	1019	1036
	80	947	964	980	994	997	1014	1030
	85	939	955	971	985	988	1004	1021
	90	930	946	963	976	979	995	1012

Dynamic CO₂ Measurement Compensation

Due to the constantly changing nature of Barometric Pressure and temperature and their effect on CO₂ measurement, the only way to get an accurate CO₂ measurement with an NDIR sensor is through temperature and Barometric Pressure compensation. That's why all BAPI CO₂ sensors have a built in Barometric Pressure sensor and temperature sensor.

Every eight seconds the BAPI sensor takes a CO₂ reading then compensates that value based on the current temperature and Barometric Pressure. That's one reason why BAPI's CO₂ sensors are the most accurate in the HVAC/R industry. There is also no need for an HVAC technician to spend valuable time manually entering the altitude value for the location into each and every sensor when it is installed. This makes the BAPI CO₂ sensor one of the easiest to install, saving time and money.

Carbon Dioxide (CO₂) in air is normally measured in Parts Per Million (ppm). At 1,000 ppm CO₂, one million air molecules would contain a mixture of 999,000 air molecules and 1,000 CO₂ molecules. The most common CO₂ sensors are Non-Dispersive InfaRed, or NDIR. An NDIR CO₂ sensor shines infrared light through a gas sample in a sample chamber (see Fig 1). A photo-detector measures the intensity of the infrared light after it passes through the gas sample. CO₂ molecules are opaque to 4.26 micron infrared light while the rest of the air molecules are not. So the intensity of the infrared light is diminished proportionally to the number of CO₂ molecules. Measuring the resultant light intensity measures the number of CO₂ molecules.

Fig. 1: Single Channel CO₂ Sensor

Sensor Drift

The most common light source for NDIR sensors is an incandescent light bulb. In these bulbs, an electric current passes through a metal filament and heats it until it starts to glow. The glowing filament is extremely hot and some of the metal atoms boil off the filament and fly around inside the bulb. Most of these atoms re-adhere to the filament when the power is turned off, but some move far enough away from the filament that they condense onto the glass envelope. Over time, this thin metal coating slightly reduces the amount of light emitted by the bulb. This reduction is perceived by the sensor as an increase in CO₂ concentration. Also, when the metal atoms condense back onto the filament, they can slowly shift the spectrum of the emitted light which can affect the perceived infrared light intensity and CO₂ concentration.

Automatic Background Calibration

One way to compensate for sensor drift is through automatic background calibration. Outdoor levels of CO₂ are generally around 400 ppm. Since people are the main source of CO₂ inside a building, when a building is unoccupied for 4 to 8 hours the CO₂ levels tend to drop to the outside level. Automatic background calibration uses the sensor's on-board microprocessor to remember the lowest CO₂ concentration that occurs every 24 hours. The sensor assumes this low point is the outside CO₂ level. The sensor is also smart enough to discount periodic elevated readings that occur if a space is occupied for 24 hours a day over a few days. Once the sensor has collected 14 days worth of low CO₂ concentration periods, it performs a statistical analysis to see if there has been any small changes in the background levels readings that could be attributable to sensor drift. If the analysis concludes there is drift, a small correction factor is made to the sensor calibration to adjust for this change. This automatic calibration requires that at least three of the last 14 days have space CO₂ levels that reach 400 ppm for an hour or more.

Reference Channel Calibration

Another way to compensate for sensor drift is through a dual channel design. In this setup, one photo-detector and filter is used for CO₂ measurement and works the same as in a single channel design. The second photo-detector and filter is a reference and uses a wavelength that is not affected by air molecules. About once a day, the sensor takes a reading using the reference channel. Any change in this reference measurement indicates a change in the optics of the sensor which can lead to drift. The sensor then automatically corrects the CO₂ measurement from the first channel to prevent the drift. While the reference channel corrects for changes over time, a field calibration will immediately restore the highest level of accuracy.

Fig. 2: Dual Channel CO₂ Sensor

BAPI Calibratable vs Non-Calibratable Sensors

Some BAPI CO₂ sensors can be field calibrated and others cannot. The figures at right show the two CO₂ sensor elements that are used on the circuit board of BAPI sensors. The units with Sensor A can be field calibrated. The units with Sensor B cannot be field calibrated. Most BAPI sensors manufactured prior to June of 2022 have Sensor A while most sensors manufactured after June of 2022 have Sensor B.

Sensor A
(Can be field calibrated)

Sensor B
(Cannot be field calibrated)

Specifications

Battery Power:

Two included 3.6V 14505, 14500 or equivalent lithium batteries (Standard AA batteries are not compatible)

Wire Power:

9 to 30 VDC or 24 VAC, halfwave rectified

Temperature Sensor Accuracy:

±1.7°F (0.95°C) from 32 to 158°F (0 to 70°C)

Temperature Range: -4 to 221°F (-20 to 105°C)

Transmission Distance: Varies by application*

Environmental Operation Range:

Temp: -4 to 149°F (-20 to 65°C)

Humidity: 10 to 90%RH non-condensing

Enclosure Material & Rating: ABS Plastic, UL94 V-0

Frequency: 2.4 GHz (Bluetooth Low Energy)

Receiver Sensitivity: -97 dBm

User Adjustable Settings:

Delta T (Temp): 0.1°F/C to 5.0°F/C

Transmit Interval: 1 min to 30 min

Sample Interval: 30 sec to 5 min

Agency:

RoHS | Contains FCC ID: QOQGM210P |

IC: 5123A-GM210P

Standard Mounting Base

60mm Mounting Base

(Fits European wall boxes and junction boxes with 60mm mounting centers)

*In-building range is dependent on obstructions such as furniture and walls and the density of those materials. In wide open spaces, the distance may be greater; in dense spaces, the distance may be less.

**Actual battery life is dependent on the sensor's adjustable settings and environmental conditions.

Associated Receiver and Output Modules

RECEIVER - Collects the data from up to 28 wireless sensors and transfers the data to the Analog or Digital Output Modules for integration into the BAS.

DIGITAL AND ANALOG OUTPUT MODULES - The BACnet IP Module converts the data from up to 28 sensors for integration into the management level BACnet IP network. The BACnet MS/TP or Modbus RTU Module converts the data from up to 28 sensors for integration into the field level BACnet or Modbus Network. The Analog Output Modules convert the sensor data to a voltage or resistance for the controller analog inputs.

Wireless Site Verification App

BAPI recommends that all wireless customers conduct a site verification and send the information to BAPI prior to installing the system to ensure optimum performance. Our experts will review the data and follow up with an approval or recommendations if needed. A site verification app is available on the BAPI website at:

<https://www.bapihvac.com/wireless-site-verification/>

Features & Options

- Rugged IP66/NEMA 4 enclosure
- User adjustable settings to maximize battery life while ensuring the BMS gets the info it needs
- Transmits to a receiver and output modules with multiple integration methods into the BMS

BAPI's Duct Wireless Sensor measures the temperature and humidity and transmits the data via Bluetooth Low Energy to a receiver and output modules with multiple integration methods into the BMS.

This unit features a rugged IP66-rated BAPI-Box enclosure and replaceable stainless steel filter.

Wireless Duct Temperature and Humidity Sensor

Specifications

Battery Power:

Two included 3.6V 14505, 14500 or equivalent lithium batteries
(Standard AA batteries are not compatible)

Wire Power:

9 to 30 VDC or 24 VAC, halfwave rectified

Sensor Accuracy:

Temp: $\pm 1.0^{\circ}\text{F}$ (0.55°C) from 32 to 158°F (0 to 70°C)
Humidity: $\pm 2\%\text{RH}$ @ 77°F (25°C), 20 to $80\%\text{RH}$

Temperature Range: -4 to 221°F (-20 to 105°C)

Transmission Distance: Varies by application*

Environmental Operation Range:

Temp: -4 to 149°F (-20 to 65°C)
Humidity: 10 to $90\%\text{RH}$, non-condensing

Enclosure Rating, Material & Material Rating:

IP66, UV-Resistant Polycarbonate, UL94 V-0

Frequency: 2.4 GHz (Bluetooth Low Energy)

Receiver Sensitivity: -97 dBm

User Adjustable Settings:

Delta T (Temp): 0.1°F/C to 5.0°F/C
Delta T (Humidity): $0.1\%\text{RH}$ to $5.0\%\text{RH}$
Transmit Interval: 1 min to 30 min
Sample Interval: 30 sec to 5 min

Agency: RoHS | Contains FCC ID: QOQGM210P |
IC: 5123A-GM210P

BAPI-Box Units Calculated Battery Life**		
Transmit Interval	Sample Rate	Estimated Life (years)
30 sec	30 sec	1.04
1 min	1 min	1.95
3 min	1 min	3.46
5 min	5 min	4.63
10 min	5 min	7.02

*In-building range is dependent on obstructions such as furniture and walls and the density of those materials. In wide open spaces, the distance may be greater; in dense spaces, the distance may be less.

**Actual battery life is dependent on the sensor's adjustable settings and environmental conditions.

Associated Receiver and Output Modules

RECEIVER - Collects the data from up to 28 wireless sensors and transfers the data to the Analog or Digital Output Modules for integration into the BAS.

DIGITAL AND ANALOG OUTPUT MODULES - The BACnet IP Module converts the data from up to 28 sensors for integration into the management level BACnet IP network. The BACnet MS/TP or Modbus RTU Module converts the data from up to 28 sensors for integration into the field level BACnet or Modbus Network. The Analog Output Modules convert the sensor data to a voltage or resistance for the controller analog inputs.

Wireless Site Verification App

BAPI recommends that all wireless customers conduct a site verification and send the information to BAPI prior to installing the system to ensure optimum performance. Our experts will review the data and follow up with an approval or recommendations if needed. A site verification app is available on the BAPI website at:
<https://www.bapihvac.com/wireless-site-verification/>

Building Automation Products, Inc. • 750 North Royal Avenue, Gays Mills, WI 54631 USA
Tel: +1-608-735-4800 • Fax: +1-608-735-4804 • Email: sales@bapihvac.com • Web: www.bapihvac.com

Features & Options

- Built in or remote temperature sensor
- User adjustable settings to maximize battery life while ensuring the BMS gets the info it needs
- Transmits to a receiver and output modules with multiple integration methods into the BMS

The BAPI-Stat "Quantum Slim" Wireless Sensor measures the temperature and transmits the data via Bluetooth Low Energy to a receiver and output modules with multiple integration methods into the BMS. It is designed to monitor temperature inside refrigerator and freezer cases. The unit mounts on the outside of freezers and can be mounted either inside or outside of refrigerators. It is available with an internal or an external sensor.

The external sensor's cable fits between the door seal or through a hole without affecting appliance efficiency.

Specifications

Battery Power: One included 3.6V 14505, 14500 or equivalent lithium battery

(Note: Standard AA batteries are not compatible)

Temperature Sensor Accuracy:

±1.25°F (0.7°C) from 32 to 158°F (0 to 70°C)

Temperature Range: -4 to 221°F (-20 to 105°C)

Transmission Distance: Varies by application*

Environmental Operation Range:

Temp: -4 to 149°F (-20 to 65°C)

Humidity: 10 to 90% RH, non-condensing

Enclosure Material & Rating: ABS Plastic, UL94 V-0

Frequency: 2.4 GHz (Bluetooth Low Energy)

Receiver Sensitivity: -97 dBm

Ext. Probe Material: 304 Stainless Steel
1.75" (44mm) Bullet Probe with FEP Cable
1" (25mm) Thermobuffer with FEP Cable

User Adjustable Settings:

Delta T (Temp): 0.1°F/C to 5.0°F/C

Transmit Interval: 1 min to 30 min

Sample Interval: 30 sec to 5 min

Agency: Contains FCC ID: QOQGM210P |
IC: 5123A-GM210P / RoHS

*In-building range is dependent on obstructions such as furniture and walls and the density of those materials. In wide open spaces, the distance may be greater; in dense spaces, the distance may be less.

**Actual battery life is dependent on the sensor's adjustable settings and environmental conditions.

Features & Options

- NSF certified¹ with food and dishwasher safe materials
- User adjustable settings to maximize battery life while ensuring the BMS gets the info it needs
- Transmits to a receiver and output modules with multiple integration methods into the BMS

BAPI's Wireless Food Probe measures the temperature and transmits the data via Bluetooth Low Energy to a receiver and output modules with multiple integration methods into the BMS. The food probes eliminate the need for an employee to hand record the temperatures with a thermometer for HACCP compliance. Bin clips are available to fit most food bins. The probe is designed for dishwasher or hand washing.

Because the probes are designed for wet, dusty or dirty environments, there are many additional applications including cooling towers, steam humidifiers or dusty/wet conveyor systems.

Wireless Food Probe with and without optional bin clip

Probe with optional bin clip inside a bin

Specifications

Power: One included Lithium 1/2AA Battery, 3.6V

Temperature Sensor Accuracy:

(Calibrated using a NIST traceable reference)
 $\pm 0.7^{\circ}\text{F}$ (0.4°C) from 32 to 158°F (0 to 70°C)

Features & Options

- Receiver output is integrated into the BMS with Analog Output Modules, a BACnet MS/TP or Modbus RTU module or a BACnet IP module
- Receiver supports up to 28 wireless sensors
- User adjustable settings
- Surface, snaptrack or DIN rail mountable

The Wireless Receiver collects the data from up to 28 wireless sensors. The data is then integrated into the BMS by analog or digital output modules.

The analog output modules convert the data to an analog voltage or resistance for direct connection to controller inputs. The receiver supports up to 127 different analog output modules.

The BACnet MS/TP or Modbus RTU digital module converts the data for integration into the field communication network and supports up to 28 wireless sensors.

The BACnet IP module converts the data for integration into the BMS ethernet communication network and supports up to 28 wireless sensors.

<https://www.bapihvac.com/wireless-site-verification/>

Overview

The Resistance Output Module (ROM) converts the temperature data from the BAPI Receiver into a Resistance for the BAS controller. The unit is factory calibrated to output a 10K-2, 10K-3, 10K-3(11K) or 20K thermistor curve.

The ROM receives data from the receiver through a four-wire bus. Up to 127 different Output Modules can be connected to a single receiver to send multiple variables to the controller.

The ROM is easily trained to a single sensor variable with a pushbutton and LED. The ROM is surface, 2.75" snaptrack or 35mm DIN rail mountable.

The ROM is powered by the receiver. Optionally, the ROM may be powered separately when the Pluggable Terminal Block Kit is used for remote connections.

Overview

The Voltage Output Module (VOM) converts the temperature or humidity data from the BAPI Receiver into a linear 0 to 5 or 0 to 10 volt signal for the controller.

The VOM receives the temperature or humidity data from the receiver through a four-wire bus. Up to 127 different Output Modules can be connected to a single receiver to send multiple variables to the controller.

The VOM is easily trained to a single sensor variable with a pushbutton and LED. The VOM is surface, 2.75" snaptrack or 35mm DIN rail mountable.

The VOM is powered by the receiver. Optionally, the VOM may be powered separately when the Pluggable Terminal Block Kit is used for remote connections.

Voltage Output Module - VOM

Receiver with two Analog Output Modules

Specifications

Supply Power:

15 to 24 VDC (from half wave rectified supply)

Power Consumption: 25 mA @ 24 VDC

Output Current: 2.5 mA @ 4KΩ load

Minimum Load Resistance: 4KΩ

Output Voltage Range:

0 to 5 VDC or 0 to 10 VDC (factory calibrated)

Lost Communication Timeout:

35 min. (Fast Flash)

Temperature output reverts to 0 volts

%RH output reverts to high scale (5 V or 10 V)

Bus Cable Distance:

4,000 ft with shielded, twisted pair cable

Output Resolution: 150 μV

Environmental Operation Range:

Temp: 32 to 140°F (0 to 60°C)

Humidity: 5 to 95%RH non-condensing

Enclosure Material and Rating:

Overview

The Setpoint Output Module (SOM) converts the Setpoint data from the BAPI Receiver into a Resistance or Voltage for the BAS controller.

The SOM receives data from the receiver through a four-wire bus. Up to 127 different Analog Output Modules can be connected to a single receiver to send multiple variables to the controller.

The Setpoint Output Module is easily trained to a single sensor setpoint with a pushbutton and LED. The SOM is surface, 2.75" snaptrack or 35mm DIN rail mountable.

The units are available with an occupancy override signal in parallel with the setpoint output. For resistance output units, the resistance goes to 0Ω briefly when the override button is pressed. For voltage output units, the voltage goes to 0V briefly when the override button is pressed.

The SOM is powered by the receiver. Optionally, the SOM may be powered separately when the Pluggable Terminal Block Kit is used for remote connections.

Setpoint Output Module - SOM

Receiver with two Analog Output Modules

Specifications

Supply Power:

15 to 24 VDC (from half wave rectified supply)

Power Consumption:

Resistance Models: 20 mA @ 24 VDC, 1.55 VA @ 24 VAC

Voltage Models: 25 mA @ 24 VDC, 1.75 VA @ 24 VAC

Output Current: 2.5 mA @ 4K Ω load

Minimum Load Resistance:

4K Ω (Voltage Output Models only)

Analog Input Bias Voltage:

10 VDC max (Resistance Output Models only)

Lost Comm. Timeout: 35 min. (Fast Flash)

Reverts to its last command

Output Resolution:

Resistance Output: 100 Ω

Voltage Output: 150 mV

Bus Cable Distance:

4,000 ft with shielded, twisted pair cable

Environmental Operation Range:

Temp: 32 to 140°F (0 to 60°C)

Humidity: 5 to 95% RH non-condensing

Material & Rating:

ABS Plastic, UL94 V-0

Agency: RoHS

Overview

The BACnet IP output module converts the data from up to 28 wireless sensors for integration into the BMS ethernet communication network.

Because BACnet IP is a standard protocol, the module is perfect for retrofitting older systems or adding new ones.

The module receives the data and power from the receiver through a four-wire bus. The module may also be powered separately using a BAPI Pluggable Terminal Block Kit and a VC350A-EZ power supply.

Configuration is quick and easy through a web-based interface, allowing both setup and adjustment without physically accessing the device once it's installed.

The receiver and BACnet IP module are surface, 2.75" snaptrack or 35mm DIN rail mountable.

Rev. 08/28/25

Wireless System

Overview

The BACnet MS/TP or Modbus RTU output module converts the data from up to 28 wireless sensors for integration into the field communication network.

The field-selectable BACnet MS/TP or Modbus RTU output lets customers choose the best protocol for their system without the need for multiple devices. This makes the module perfect for retrofitting older systems or adding new ones.

The module receives the data and power from the receiver through a four-wire bus. The module may also be powered separately using a BAPI Pluggable Terminal Block Kit and a VC350A-EZ power supply.

Configuration is quick and easy with the USB-C port and a computer running the downloadable application.

The receiver and module are surface, 2.75" snaptrack or 35mm DIN rail mountable.

Overview

- DIN Rail, Snaptrack or Surface Mount
- Compact & Cost-Effective 350 mA Unit
- Self-resetting Thermal Fuse
- Operation & Fault LED Indicators
- Fixed or Adjustable Outputs
- Output Protected Against Overload and Shorting

BAPI's 350A-EZ is a cost-effective way of converting 24 VAC or VDC to 5, 12, 15 or 24 VDC for use on peripheral devices that require DC voltage. The converter is available with a 350 mA output. The revolutionary mounting system allows for 2.75" snaptrack, DIN rail or surface mounting.

Although most BAPI room units can run on 24 VAC power, converting to DC power eliminates the AC power "noise" which can affect the room sensor readings. BAPI's tests show that fluctuating and inaccurate signal levels are possible when AC power wiring is present in the same cable as the signal lines. All fixed outputs of 5, 10, 12 or 15 VDC are adjustable $\pm 10\%$. The adjustable model has an output of 5 to 24 VDC.

Overview

The PS17RF, PS18RF and PS19RF Power Supplies provide multiple 33 VDC* outputs with over-current protection to operate any of BAPI's ETA modules except the RS-485 communication modules. All power supplies are furnished with standard 2.75" snaptrack and include a green LED to indicate when power is supplied to the unit.

The power supplies use a customer-supplied 24 VAC* transformer with a rating of 200 to 600 VA depending upon current consumption (See transformer info below). Pluggable screw terminals allow easy termination of the transformer.

All three units provide a transient line filter for the line voltage input to the transformer. Plug a standard computer power cord into a duplex outlet and then into the line filter to power the units.

PS17RF

PS18RF

PS19RF

All units shown in the supplied 2.75" snaptrack

Specifications

- Compact and Cost-Effective
- Regulated and Adjustable 1.2 VDC to 24 VDC Output
- Output Protected Against Overload and Accidental Short Circuit

BAPI's VC2000 Voltage Converters are accurate, rugged and reliable power sources designed for commercial energy management applications.

The 2 Amp Voltage Converter accepts a 24 VAC input which can be field adjusted to a regulated output of 1.2 VDC to 24 VDC (factory set for 24 VDC). The input can be field configured for full or half wave rectification. The unit includes an output fuse to protect against overload and short circuits, a power indication LED, and is available with or without a backplate on the steel mounting bracket. Self-resetting or cartridge fuses may be specified at the time of order.

Weather Shade Kit

Accessories for HVAC/R

G7

Features & Options

- Improves Accuracy of Outside Air Sensors by Reducing Solar Heat Gain
- Simple and Sturdy Mounting Method

External temperature, humidity and air quality sensors can be affected by solar heat gain. The BAPI Weather Shade effectively reduces the solar heat gain, improving the accuracy of the sensor.

The shape of the cone and spacing from the wall creates a chimney which draws radiant heat from solar gain away from the sensor. The “domed” top also prevents bird nesting while the smooth surface minimizes hosting of insects.

The Weather Shade is constructed of solar stabilized plastic to ensure a long, corrosion-free life. The material also has a high reflectivity rating (87%) and low emissivity rating (0.90) to reduce the radiant heat created from solar gain. Besides reducing solar heat gain, the shade also protects the probe filter from precipitation and grit, extending the life of the filter.

The Weather Shade mounts quickly and securely to the BAPI-Box and BAPI-Box 2 enclosures.

Weather Shade

Weather Shade mounted on a BAPI-Box 2

Features & Options

- Detection Within 5 Seconds with Local LED Alarm Indication
- Alarm Output, Two 5 Amp Relays
- Attached Sensor or Remote Sensor
- Automatic or Manual Unit Reset

The Water Leak Detector is designed to sense the presence of water and alert a central monitoring system of the potentially destructive situation. Upon water detection, the alarm output relays change state, and a local red LED illuminates.

Specifications

Power: 24VAC/VDC $\pm 10\%$, 3.9VA max @ 24VAC, 90mA max @ 24VDC (Reverse Polarity Protected)
Note: This unit does not require a separate isolated power supply.

Rectification: Half Wave

Wiring:

Screw Terminals: 2 to 4 pair of 12 to 22AWG (BAPI recommends 16 to 22AWG).

Water Detection Sensor: 2 wires (provided), optional Flex Connector or Liquid Tight Fitting for strain relief

Sensor:

Attached Sensor: Sensor w/ adjustable depth blade from 0.063 to 0.913" (1.60 to 23.19mm)

Remote Sensor: Sensor w/ adjustable depth screw from 0.062 to 0.5" (1.57 to 12.70mm)

(Attached and Remote Sensors are designed to be mounted to flat surfaces or on the rims of drip pans.)

Alarm Reset Action: Field selectable for Auto (Non-Latching) or Manual (Latching)

Local Indication: One green power LED, one red alarm LED

Alarm Relay Contacts: Two SPDT, 5 Amp relay outputs

Operating Environment

Remote Sensor: -20 to 185°F (-29 to 85°C)

Detector (BB): -4 to 149°F (-20 to 65°C), 0 to 95%RH, non-condensing

Enclosure Material and Ratings: NEMA 4 (IP66), UV-resistant polycarbonate, UL94 V-0

Agency: CE 61326-1:2013 EMC (Industrial Electromagnetic Environment), RoHS

Warranty: 5 years

Features & Options

- For Use with Normally Closed (NC) Door Switches
- Door Status LEDs
- Two Auxiliary Relays with Status LEDs
- Audible Annunciator
- User Selectable Time Periods

The BAPI Door Monitor Alarm (DMA) monitors a door switch to alert personnel when the door is closed, open or has exceeded its user-selectable open time period. Green, amber and red LEDs on the face of the unit alert nearby personnel the door's status.

Leaving the door open for longer than the user-selected time will also energize an internal audible annunciator to alert nearby personnel that the door should be closed immediately. The unit also has two auxiliary relays that will energize whenever the door is opened to alert other user-supplied warning devices or a building automation system.

Door Monitor Alarm (DMA)

Specifications

Power: 24 VAC or 24 VDC (UL Listed Class 2 Power Source only)

Power Consumption (max): 7.5 VA @ 24 VAC, 200 mA @ 24 VDC

Door Switch Contacts:

Normally Closed (NC) = door open is alarm condition

Normally Open (NO) = door closed is alarm condition

Auxiliary Relay Contact Rating: 1.0 Amp @ 30 VAC/VDC

Audible Annunciator: 90dB; 2,730 Hz

Wiring: 16 to 22 AWG

Environmental Operation Range:

Temp: 32 to 140 °F (0 to 60 °C)

Humidity: 5 to 95%, non-condensing

Enclosure Material:

UV-resistant Polycarbonate, UL94 V-0

Enclosure Rating: IP66, NEMA 4

Agency:

BAPI-Guard 2

Overview

Many electrical, water or gas meters provide a pulse output with each pulse representing a specific quantity of the media being measured. These pulse outputs often need to be electrically isolated from the controller's input by a buffer.

The PMPB5 provides that buffer by receiving the pulses from the meter and recreating them as dry contact closures. An LED lights whenever the buffer contacts are closed. The PMPB5 fits standard 2.75" snaptrack.

PMPB5 mounted
in optional 2.75"
snaptrack

TS1 & TS2 - Transient Suppressor

Accessories for HVAC/R

G17

Overview

HVAC control systems can be subjected to electrical transients (temporary excess voltage) from various sources. Damage to control systems can occur if static electricity, lightning or contractors produce transients of sufficient magnitude and duration to overwhelm the protection built into the control system components. The TS1 and TS2 can significantly increase the transient protection and reduce the possibility of damage to the control system. Both modules fit in standard 2.75" snaptrack

The TS1 is specifically designed for network communications between control system components. The TS1 clamps voltages to 10 VAC or ± 14 VDC Line to ground and 7.5 VDC line to line. *Note: The added capacitance of the TS1 may be unsuitable for some combinations of communications line length and high speed data. For best operation you may have to reduce line lengths and add data repeaters.*

The TS2 is designed to protect 4 to 20 mA current loops. The TS2 clamps the signal return line to 5 volts above ground and 1 volt below ground. The voltage supply line is clamped to ± 39 VDC Line to ground.

TS1 or TS2 Transient Suppressor with optional 2.75" snaptrack

Features & Options

- Makes mounting of averaging sensors quick and easy
- Eliminates risk of kinking and damaging the probe
- Scored break off for 1/4" rigid probe mounting
- Nylon material limits heat/cold conduction to the probe

The Flexible Probe Bracket (FPB) is used to mount averaging sensors, low limit thermostats, or liquid fill thermostats in duct applications for probe diameters from 1/8", 1/4" and 3/8".

The bracket is used to reverse the direction of the flexible probe with a smooth arc to eliminate the risk of kinking the sensor and damaging the probe.

A fixed 1/4" probe may also be mounted as part of the bracket design using the scored break-off. The FPB is made out of tough UL94 V-2 Nylon which limits heat/cold conduction to the probe and has multiple mounting holes to make mounting quick and easy.

BAPI Screwdriver & Allen Wrench

G19*Accessories for HVAC/R*

Features & Options

- Flathead Screwdriver for Terminal Block screws
- 1/16" Allen Wrench for Cover Locking Screws
- Works on Delta, PreCon, Powers and all BAPI-Stat Room Unit Enclosures

**6.75" model (top) and 6" model (bottom)**

BAPI Screwdriver & Allen Wrench Combinations are especially useful for installing BAPI room units. The flathead screwdriver can be used to turn the screws on the circuit board terminal block while the 1/16" Allen wrench is used for the locking screws on the removable cover. One 6" screwdriver (BA/116) is included with every 25 room units ordered. This model is not designed for prolonged use. The 6.75" model (BA/116W) is designed for prolonged use.

Features & Options

- Quick, Easy and Professional Looking Knockouts for the BAPI-Box, and BAPI-Box 2 Enclosures
- One Step Cutting Bit
- Standard Hex Drill Bit Shaft
- Quick Disconnect Shaft
- Built in Rim Stop Prevents Damage to Internal Components
- Stainless Steel Construction
- Comes with Blade Sheath

Clean-Cut Tool

The Clean-Cut hole cutter is designed to cut out the plastic plugs in the ½" NPSM threaded ports of the BAPI-Box and BAPI-Box 2 polycarbonate enclosures. This tool makes removing the plastic plug fast and easy and produce a professional-looking .65" diameter hole.

A built-in stop prevents the tool from pushing through and possibly damaging sensitive electronics within the box, so there's no need to remove the items to drill the hole. The Stainless Steel construction keeps its edge and lasts for over 1,000 operations in both directions. The tool can be sharpened with a hand grinder or file and comes with a protective sheath to protect the blades and user.

BAPI-Stat 4 Trim Ring

*Accessories for HVAC/R***G21**

Overview

The BAPI-Stat 4 Trim Ring provides a professionally finished appearance for the BAPI-Stat 4 Room Enclosures. If you are using back boxes, the trim ring covers any wall imperfections between the back box and the wall.

To install, place the trim ring on the wall, nest the BAPI Stat 4 mounting base into the ring and attach everything to the wall with the BAPI-Stat 4 mounting screws. The BS4 trim ring only adds 0.07 inches (1.7mm) to the depth of the BAPI Stat 4.

Overview

If you'd like to personalize the look of your sensor, the BAPI-Stat "Quantum" and "Quantum Prime" room sensors, the ZPM pressure, the BAPI-Box, BAPI-Box 2 and BAPI-Box Crossover enclosures are available with your company's individual logo printed on the front.

To create the custom logo plate, you will need to provide BAPI with a digital version of your logo, preferably in Adobe Illustrator or another vector-based program format. You will also need to provide your company's Pantone® (PMS) colors if you desire a color match.

Lead time and logo plate costs vary with the style of enclosure, the number of colors and the quantity of logo plates ordered.

Call BAPI for pricing information and lead times on Custom Logo Plates.

Outdoor Light Level Sensor

G25*Accessories for HVAC/R*

Features & Options

- 0 to 2,000 Lux or 0 to 875 Foot Candle Ranges
- Extremely Sensitive, Even in Dim Lighting (<10 Foot Candle or 108 Lux)
- Rugged and Watertight Enclosure

The BAPI Outdoor Light Level Sensor conserves energy by allowing lights to be shut off when the ambient light level exceeds a specified level. The sensor can also help ensure safety by allowing lights to be turned on when the ambient light falls below a specified level.

The unit comes in a rugged and watertight UV-inhibited polycarbonate enclosure with an IP66, NEMA 4 rating. The light level range is available as Foot Candle and Lux with 0 to 5V, 0 to 10V or 4 to 20 mA output. Custom ranges are also available.

Overview

Some automation providers use the smaller RJ22 (telephone handset connector) instead of the RJ11 (telephone wall connector) for their in-the-zone network communications devices. The BAPI RJ22 Communications Adaptor converts the standard RJ11 jack used in BAPI sensors to the smaller RJ22 dimensions.

BAPI Foamback Insulator

Overview

Made of closed cell foam, the Foamback Insulator ensures that room sensors are reading the temperature of the room, not the temperature of the wall. They also guard against condensation from mixing of room air and wall air around the room unit. The foambacks measure 2.6" wide by 4.4" high and feature an adhesive backing. They are available in a thickness of 0.25" or 0.125". Note: Several BAPI products come standard with foambacks including wall plates and duct units.

ORDERING INFORMATION

Part Number	Description	List Price
BA/FOAMBACK-25	White Foamback, 0.25" thick, pack of 25	\$82

Features & Options

- Creates a Weatherproof Wire Connection
- Crimp-On & Twist-On Styles Available

BAPI's Sealant Filled Connectors (SFC) contain a moisture-excluding sealant which encapsulates the electrical connection protecting it from moisture and oxidation. This encapsulation also reduces the potential for fire, electrocution and flashover.

BAPI offers three types of SFCs: a Crimp-On, a Round Crimp-On and a Twist-On.

The Crimp-On SFC1000 accepts two 22 to 26 AWG wires. It has a voltage rating of 60 volts with a temperature not to exceed 140°F (60°C), and it is not UL listed.

The Twist-On SFC2000 accepts two 22 AWG wires or one 22 AWG and one 16 or 18 AWG wire. It has a voltage rating of 300 volts and a temperature not to exceed 221°F (105°C), and it is not UL listed.

The Crimp-On Round SFC3000 is an insulation displacement connector (IDC) that accepts two wires of 19 to 26 AWG. It has a voltage rating of 50 volts with an operating temperature of -40 to 158°F (-40 to 70°C), and it is compliant to RoHS 2011/65/EU. It is not UL listed. To terminate, simply insert your wires and crimp down on the cap with a set of pliers.

Pierceable Knockout Plugs for Enclosure Ports

G29

Rev. 09/24/24

Accessories for HVAC/R

Features & Options

- Quick and Easy to Install and Forms an Excellent Cable Seal
- Pierceable Center Membrane for Simple Cable Insertion
- Works in Non-Threaded Ports of the BAPI-Box and Junction Box Enclosures
- Works in Panels with a Metal Thickness of .118" or Smaller

Top and bottom view of a Pierceable Knockout Plug

Pierceable Knockout Plugs are available for the open port in the BAPI-Box Crossover and BAPI-Box 4 Enclosure, as well as the non-threaded ports in the BAPI-Box, BAPI-Box 2 and Junction Box enclosures. The plugs will also work in panels with a metal thickness of 0.118" or smaller.

The plugs are made of TPE (Thermoplastic Elastomer) and feature a pierceable center membrane for easy wire insertion. When used with the proper diameter cable, the plugs form an excellent cable seal after piercing.

When installed in the open port of the BAPI-Box 4 or BAPI-Box Crossover Enclosure, the Pierceable Knockout Plug increases the enclosure rating from IP10 to IP44.

Pierceable Knockout Plug installed in a J-Box (top) and in the open port of a BAPI-Box Crossover Enclosure (left).

BAPI-Guard

Thermostat Protector

BAPI-Guard
installed over
a BAPI-Stat
“Quantum”
room sensor

- Prevents Tampering, Damage and Unauthorized Adjustment
- Exceptional Airflow for Proper Thermostat Operation
- Made from Thick, Durable Polycarbonate with Key Lock Protection
- Low Profile Design with Two Sizes to Fit Most Thermostats
- Horizontal or Vertical Mounting with Hardware Included

The BAPI-Guard prevents tampering, physical damage and unauthorized adjustment of thermostats. The attractive design is available in two sizes to fit most thermostats. It is made of thick, durable polycarbonate and features exceptional airflow, key lock protection, horizontal or vertical mounting and easy installation with hardware included.

ETA Product Line Overview

BAPI's **Electronic Technician Assistant (ETA)** products are a uniform line of interface and communication devices that complement a DDC installation. They consolidate many of the components being used at present and provide a more complete picture of the system than a laptop computer alone.

The ETA devices simplify wiring and troubleshooting by providing a pluggable screw terminal for each and every wire in the system, making it easy to break the system into sections to quickly isolate a problem. The devices cut down on control panel clutter because they plug into specially designed backplanes which

distribute power through the mounting connectors, greatly reducing the number of wires in the panel.

The ETA devices are also a practical and inexpensive way to pick up feedback signals which are currently ignored in many systems, such as non-critical alarm points or actuator feedback signals. Having convenient LED display of these signals at the control panel, or summarizing multiple feedback signals into a single input to the controller, provides a more complete picture, helping the facility manager and technicians keep the system performing at its optimum level.

DS8 - Discrete Summary Module	pg. H4
Summarizes up to 8 alarm points and sends out a single signal to the controller when the number of alarms reaches a user-defined threshold.	
EA1 - 2 Position Actuator Interface	pg. H5
Simplifies the wiring and troubleshooting of Belimo® style 2-position actuators with auxiliary switch position feedback.	
EA2 - Modulating Actuator Interface	pg. H6
Simplifies the wiring and troubleshooting of Belimo style actuators with voltage feedback.	
OAM - Output Adjust Module	pg. H7
Works with an EA2 module to let you stroke an actuator to any position without additional equipment.	
3324VC - Voltage Converter	pg. H8
Converts the 33 VDC output from the PS17 Power Supply into the 12 or 24 VDC required by some ETA modules.	
CDSP2 - CO ₂ Sensor Power Supply	pg. H9
Provides 12 or 24VDC power and terminations for up to two CO ₂ sensors.	
SQ4 - Four-Step Sequencer	pg. H10
Simplifies proportional control by sequencing multiple on-off devices based on a single analog output from the controller.	
MXV - Dry Switch Monitor, 5 Input	pg. H11
The MXV monitors five dry switch closure devices and provides one 0 to 10V output to the controller.	
R49 - Relay Interface, 9 Output	pg. H12
Conserves critical controller space by turning on or off up to 9 relays using only one controller output.	
DS6R - Dry Switch Monitor.....	pg. H13
Monitors six dry switch closure devices and provides one resistive output to the controller.	
PMPB5, TS1 & TS2 Modules	pg. H14
PMPB5 - Provides electrical isolation between the controller and the pulse output from electrical, water & gas meters.	
TS1 & TS2 - Protects HVAC control systems from electrical transients from various sources.	
TURB - Terminal Unit Relay Board	pg. H15
Allows convenient interconnection between a Controller and a DX unit thermostat terminal block.	
Backplanes.....	pg. H16
The Backplane and Vertical Backplane provide mounting and power for the ETA modules.	
TRK Snaptrack.....	pg. H18
Provides easy mounting for the ETA devices.	
PAN 16 Panduit	pg. H19
Wire guides for the ETA devices.	
PS17, PS18 & PS19 - Power Supplies.....	pg. H20
Provide multiple 33 VDC outputs with over-current protection to operate BAPI's ETA modules.	
COMBLK & COMBLK2.....	pg. H22
Small circuit board terminal blocks that simplify the termination.	

COMSRG - Comm. Surge Protector	pg. H23
The transient protection on the controller terminals is often inadequate. The COMSRG provides the extra protection to prevent damage.	
RPTR - RS-485 Repeater and Repeater Kit.....	pg. H24
Standard RS-485 communications are limited to 32 unit loads and 4,000 feet. Each RPTR Module or Kit allows an additional 32 unit loads or 4,000 feet.	
FOX - RS-485 Fiber Optic Transceiver and Transceiver Kit.....	pg. H26
Converts RS-485 data from the controller to a fiber optic signal for transmission to other buildings, then converts it back again.	
SOX - RS-485 Single-Mode Fiber Optic Transceiver	pg. H28
Converts RS-485 data to single-mode fiber optic signal then converts it back again.	
TB18 - Pluggable Terminal Block	pg. H29
Small circuit board terminal block that simplifies termination.	
RBP - Communications Repeater Backplane	pg. H30
Distributes power and communications for up to four FOX, SOX or RPTR modules.	
RBP Power Bridge & Extender.....	pg. H31
Power Bridge - Bridges power and breaks out the communication lines.	
Extender - Raises the connections for easy access	
SRBP - Comm. Repeater Backplane.....	pg. H32
Distributes power and communications for a single FOX, SOX or RPTR module.	
TUCOM - Term. Unit Comm. Block	pg. H33
The TUCOM adds 3 pluggable terminals to the Carrier Comfort System controller.	
BELCON - Mating Pair Belimo Connectors	pg. H33
The BELCON allows a 4-pole pluggable connection between a peripheral and controller.	
IRM4 - Interposing Relay Module	pg. H34
Four independent channels that convert a relay output to a contact output or a voltage output.	
LRCA - Link Router Comm. Adapter	pg. H35
Adds an RJ jack to a Carrier i-Vu Link/Router.	
PSOCL - Power Supply Current Limiter	pg. H35
Buffers the output of the BAPI PS17 Power Supply when powering the Carrier i-Vu Link/Router.	
UCRB - Universal Controller Relay Board	pg. H36
Interconnects a controller's digital outputs to any device that requires a conventional thermostat input.	
SS-AC - Selector Switch/Alarm Counter	pg. H37
Monitors a multitude of 4-position selector switches to regulate the speed of VFD fans.	
SD2 - Status Display, Dual 7 Segment.....	pg. H38
Displays a program error code with a manual reset switch to route a reset signal to a controller.	
Steel Enclosures and Accessories.....	pg. H39
Steel enclosures in three sizes, Backplates & Cable Guides, designed to accomodate all ETA devices.	

Overview

The number of discrete switch closure inputs required in an HVAC system often exceeds the number of hardware inputs available (or justifiable) on the controller. Summarizing multiple discrete points into a single system input is an easy and effective solution. The DS8 module accepts up to eight dry contacts and provides a single dry contact signal to the controller when the number of monitored points reaches a user-defined threshold.

The DS8 is great for grouping alarms which you will want to distinguish in the field, but don't need to distinguish on the central computer. Examples include dirty filter alarms, condensate float switches, VFD faults, moisture monitors, door switches, etc. A technician can glance at the DS8 and quickly determine which filter to change; which drain to check or which VFD to inspect.

The DS8 plugs into the BP2, BP4, BP4-V or BP8 backplane and accepts up to eight independent dry switch contacts on easy-to-use connectors at the front of the module. Each input has an LED to indicate when the contact is closed. An eight-position DIP switch allows the user to set the alarm threshold. The output is also user switchable to a NO or NC dry contact.

The DS8 can also be used to monitor multiple auxiliary contacts when multiple discrete points are controlled using an R49. Typical applications include lighting controls and small fan controls.

EA1 - Two Position Actuator Interface

H5

Rev. 06/04/26

ETA Line

Overview

The EA1 simplifies the wiring and troubleshooting of Belimo® style two-position actuators with end switch position feedback. Each EA1 module can control two actuators from a single controller output and provide a summary dry contact status when a user-selectable number of end switches close (1, 2 or more). The actuators can move together or in opposite directions based on jumper settings on the module. An additional end switch input allows multiple EA1s to be cascaded together.

The connectors on the front of the EA1 module are readily accessible and make terminations quick and easy for the controller, actuators and actuator end switches. The red and amber LEDs on the EA1 indicate when power is being supplied to the actuators and when they have reached their end states. These LEDs tell the technician the state of the controller output, when power is being sent to the actuators and if the actuator end switch is closed.

The EA1 plugs into a BP2, BP4 or BP8 backplane. A green LED on the EA1 indicates when power is present.

Overview

The EA2 simplifies the wiring and troubleshooting of Belimo® style modulating actuators with voltage feedback, saving time and money every time you install or check an actuator. The connector plug on the front of the EA2 module makes terminations quick and easy for the controller and the actuator. The four actuator wires and the controller's output signal terminate on the connector plug. The EA2 provides regulated and fused power for the actuator from the backplane.

The EA2 module is an excellent troubleshooting tool because the technician does not need to gain physical access to the actuator to determine if the actuator is in the correct position. The EA2 display shows the actuator position based on the actuator's feedback signal. An easy push of a button on the EA2 and the display shows the position which the controller is requesting. Troubleshooting is a simple comparison of the two. If they don't match, you have a problem; the actuator is either stuck, manually overridden, not terminated properly or dead.

The EA2 plugs into a BP2, BP4, BP4-V or BP8 backplane. A green LED on the EA2 indicates when power is present.

OAM - Output Adjust Module

ETA Line

H7

Overview

Many times, it is necessary to move an actuator throughout its entire range of motion to troubleshoot the mechanical linkage. In DDC systems, this procedure may require a laptop computer, communications interface and special software. Then you have to know which controller to interface with, that controller's individual address and which output connects to the actuator you need to troubleshoot. Now the battery is going dead on your laptop and there is nowhere to plug in the charger.

There is a better way. If you use the EA2 module (p.G6) to drive your modulating actuators, the OAM (Output Adjust Module) accessory allows you to stroke your actuator to any position without any additional equipment. Simply plug the actuator cable into the OAM and then plug the OAM into the EA2. Turning the knob on the OAM allows you to set the actuator's position anywhere in its range. Push the button on the EA2 to see your commanded position, release the button to see the actuator's position.

Overview

Some of BAPI's ETA products require regulated power of 12 or 24 VDC, including the FOX and SOX - RS-485 Fiber Optic Transceivers and the RPTR - RS-485 Repeater. The 3324VC - Voltage Converter is perfect for these. It converts a 16 to 36 VDC input into a 12 VDC regulated output, or a 28 to 36 VDC input to a 24 VDC regulated output. The 12 or 24 VDC outputs are field selectable with a jumper setting.

The 3324VC can be mounted in two ways. As usual, the units plug vertically into a BP2, BP4, BP8 or BP4-V Backplane like other ETA modules. The voltage converter receives its supply power from the Backplane which is supplied by a PS17/18/19RF Power Supply or other suitable power supply.

The 3324VC can also be mounted directly in snaptrack. The unit is then powered with a two-wire connection from a PS17/18/19RF Power Supply or other suitable power supply.

Output Current: 1.5 Amp Max (30VA max)

CDSP2 - Carbon Dioxide Sensor Power Supply

H9

Rev. 06/04/26

ETA Line

Overview

Many facilities use Carbon Dioxide (CO₂) sensors for demand-controlled ventilation. Although BAPI makes CO₂ sensors that can run on AC or DC power, many sensors require 12 or 24 VDC to operate and additional terminations to land the wiring. The extra power supplies, wiring and terminations can clutter up the control panel or the control room.

The CDSP2 module removes the clutter and the wiring hassles by providing the power and terminations for two CO₂ sensors. Additional CDSP2 modules can be mounted neatly in the associated backplane to accommodate an unlimited number of sensors throughout the facility. The 12 or 24 VDC output power of the module is field selectable with a jumper setting. All three outputs will be the same voltage.

The CDSP2 plugs into the BP2, BP4, BP4-V or BP8 Backplane. The CDSP2 receives power from the backplane which is powered by a BAPI PS17/18/19RF or other suitable power supply.

Three green Output Power LEDs light whenever power is present at the output terminals.

Specifications

Overview

The high cost of energy today makes proportional control of HVAC systems a necessity, not a luxury. With proportional control you use only the energy needed to get the job done.

Proportional control is easy for water valves and air dampers, but more complex and cost prohibitive for electric heat units, fans and refrigeration systems. The SQ4 module simplifies the job by sequencing multiple on-off devices based on a single analog output from the controller. Now items such as cooling towers with multiple two-speed fans, staged electric heaters and multi-compressor chillers can be controlled to provide the utmost efficiency and consistency for the load at hand – all at a reasonable price.

Each SQ4 module provides four outputs that trigger at four fixed voltages across the 0 to 5 or 0 to 10 control voltage range. Two SQ4 modules can be cascaded to provide eight independent output stages. When energized, each output provides 24 VDC at 120 mA. In addition, sequencer modules are available that provide a rotational sequence as well as status contact monitoring with alarm output.

MXV - Dry Switch Monitor, 5 Input

H11**ETA Line**

Overview

The MXV monitors five dry switch closure devices and provides one 0 to 10V analog output to the controller. Each switch closure adds a precise voltage to the output so a simple subtraction algorithm lets the controller know which switches are closed at any time.

The MXV plugs into either the BP2, BP4, BP4-V or BP8 backplane and receives its power from the backplane. Each switch terminates on an independent plug on the front of the module and an LED associated with each input indicates when the switch is closed.

The MXV can be combined with other BAPI ETA modules, such as the DS8 Discreet Summary Module, to monitor additional switches.

Overview

It is often necessary to perform several tasks simultaneously in an HVAC system – for example, turn on an auxiliary supply fan, turn on an exhaust fan, open purge dampers and close return dampers. Rather than tying up four outputs on the controller to perform these tasks, the BAPI R49 conserves critical controller points by turning on or off up to nine relays using only one controller output.

Each output on the R49 module has a switch so that some loads may be turned off while others are turned on as the input changes state.

Each R49 output supplies a nominal 24 VDC at 120 mA allowing it to control most common relays or small contactors. Each output has a red LED to indicate when power is present.

The R49 plugs into a BP2, BP4 or BP8 Backplane. A green LED indicates that power is present to the module.

DS6R - Dry Switch Monitor

H13**ETA Line**

Overview

The DS6R module monitors six dry switch closure devices and provides one resistive output to the controller.

Each switch closure subtracts a precise resistance from the output so a simple subtraction algorithm at the controller decodes which switches are set.

Each switch terminates on an independent plug on the front of the DS6R module and an LED associated with each input indicates switch closure for simple troubleshooting.

The DS6R plugs into the BP2, BP4, BP4-V or BP8 backplane.

Overview

Many electrical, water or gas meters provide a pulse output with each pulse representing a specific quantity of the media being measured. These pulse outputs often need to be electrically isolated from the controller's input by a buffer. The PMPB5 provides that buffer by receiving the pulses from the meter and recreating them as dry contact closures. An LED lights whenever the buffer contacts are closed. The PMPB5 fits standard 2.75" snaptrack.

Part Number	Description	List Price
BA/PMPB5	Pulse Meter Pulse Buffer	\$65

Specifications

Power 24VAC 50/60HZ @ 25mA (0.6VA)
 Contact rating 1A @ 24VAC/DC max, 1mA @ 5VDC min*
 Contact repetition rate 2 seconds per pulse maximum

*Return pulse from the relay contact is clamped at 5V to ground.

PMPB5 mounted
in the optional
2.75" snaptrack

TS1 & TS2 - Transient Suppressor

Overview

HVAC control systems can be subjected to electrical transients (temporary excess voltage) from various sources. Damage to control systems can occur if static electricity, lightning or contactors produce transients of sufficient magnitude and duration to overwhelm the protection built into the control system components. The TS1 and TS2 can significantly increase the transient protection and reduce the possibility of damage to the control system. Both modules fit in standard 2.75" snaptrack

The TS1 is specifically designed for network communications between control system components. The TS1 clamps voltages to 10 VAC or ± 14 VDC Line to ground and 7.5 VDC line to line. *Note: The added capacitance of the TS1 may be unsuitable for some combinations of communications line length and high speed data. Line lengths may have to be reduced or repeaters added for best operation.*

The TS2 is designed to protect 4 to 20 mA current loops. The TS2 clamps the signal return line to 5 volts above ground and 1 volt below ground. The voltage supply line is clamped to ± 39 VDC Line to ground.

Part Number	Description	List Price
BA/TS1	Transient Suppressor (voltage)	\$28

TURB - Terminal Unit Relay Board

ETA Line

H15

Overview

Today's energy costs are forcing older buildings to be retrofitted with Building Management Systems - keeping the occupied spaces comfortable while reducing the overall energy use. The TURB - Terminal Unit Relay Board is an interface board that allows convenient interconnection between a Digital Controller and a DX unit's conventional thermostat terminal block. The TURB eliminates the wiring mess and provides a neat professional look that simplifies maintenance to eliminate costly callbacks.

The TURB provides an easily pluggable interface between the modules and provides fused power to the controller from the "R" terminal of the DX unit. Dry-contact pilot duty relays interface between the Digital Controller and the conventional thermostat inputs of the DX unit.

The TURB also provides a "mini communications block" with surge protection to provide a clean and easily pluggable connection to the controller. All this is packaged on a board that mounts in a 2.75" snaptrack in one orientation, or a 3.25" snaptrack in the other orientation, depending on how you want to install the module.

Overview

The BP2, BP4 and BP8 Backplanes provide a convenient way to mount and power the BAPI ETA devices and eliminate control panel clutter. All backplanes fit standard 2.75" snaptrack.

ETA modules plug into the sockets on the face of the backplane. BP2, BP4, and BP8 backplanes accommodate 2, 4, and 8 ETA modules, respectively.

The Backplanes receive power from PS17/18/19RF or a customer-furnished power supply. The Backplanes can be plugged together using the end-to-end connectors to handle many modules. The BP2 and BP4 can receive power from BAPI's VC350 voltage converter depending on the application (in Accessories section). While DC is recommended, most ETA modules will work with 24VAC input.

The BPCX extends the backplane power input plug to make it more accessible for service.

BP4-V - Vertical Backplane & BP-BR - Power Bridge

H17

Rev. 06/04/26

ETA Line

Overview

The BP4-V - Vertical Backplane was designed to add additional ETA boards into a congested panel where the only space for the snaptrack is vertical. The BP4-V allows the use of any vertical spaces that may go unused. Each BP4-V accommodates four ETA modules.

If more than one BP4-V is needed, they should be connected together with a BP-BR -Power Bridge. The BP-BR bridges the power between the backplanes and provides clearance from one BP4-V to the other for easy insertion of the ETA modules. The BP-BR also provides two additional power entry points in case the bottom plug location is not easily accessible.

For large control systems, the BP4-V receives power from a PS17/18/19RF Power Supply. For small control systems, the BP4-V can receive power from BAPI's VC350 voltage converters. While not recommended, most ETA modules will also work with 24VAC input.

Note: Do not use the BP4-V in horizontal snaptrack. Use the BP2, BP4 or BP8 instead.

Overview

All good projects need to start out with a proper foundation and BAPI's ETA modules are no exception. The TRK - Snaptrack provides a sturdy, secure and easy mounting method for many products in the ETA line. The standard 2.75" snaptrack is available in several convenient lengths to accommodate all ETA products and enclosures.

The snaptrack firmly holds the ETA interface and communications backplanes, terminal blocks and other products in place so you can build neat, accurate and cost effective control panels. The plastic track is easy to cut in the field to fit any application.

Overview

The PS17RF, PS18RF and PS19RF Power Supplies provide multiple 33 VDC* outputs with over-current protection to operate any of BAPI's ETA modules except the RS-485 communication modules. All power supplies are furnished with standard 2.75" snaptrack and include a green LED to indicate when power is supplied to the unit.

The power supplies use a customer-supplied 24 VAC* transformer with a rating of 200 to 600 VA depending upon current consumption (See Transformer Specs). Pluggable screw terminals allow easy termination of the transformer.

All three units provide a transient line filter for the line voltage input to the transformer. Plug a standard computer power cord into a duplex outlet and then into the line filter to power the units.

All units shown in the supplied snaptrack

Overview

The COMBLK and COMBLK2 Communication Terminal Blocks simplify the task of terminating communications wiring.

The COMBLK has four independent circuits and the COMBLK2 two independent circuits. Each independent circuit includes three connectors — bus in, bus out and wiring to the controller. Either COMBLK allows the in and out bus segments to be quickly isolated and tested, thus greatly simplifying the troubleshooting. A common ground connector provides an easy way to ground all shield drain wires. Also, both COMBLKs accommodate the COMSRG surge suppressor, which plugs directly inline between the COMBLK and the communications bus segment terminated on the plug.

Either COMBLK is suitable for RS-485 wiring, Modbus, BACnet or virtually any other communications standard that talks over two or three wires. The small size of the COMBLK2 makes it ideal for installing within VFD enclosures, power meter cabinets, etc. where Modbus or other protocol communication must be connected to a remote communicating device. Both fit into industry standard 2.75" snaptrack and COMBLK2 is furnished with a TRK02.

Overview

RS-485 is the most common communications standard for DDC controllers; however, it is limited to 32 unit loads and 4,000 feet. Extending the network beyond 32 unit loads or 4,000 feet requires repeaters.

BAPI's RPTR connects two RS-485 segments together. Data from one segment repeats to the other segment and vice versa. Each RPTR module allows an additional 32 unit loads or 4,000 feet.

The RPTR module plugs into the communications repeater backplanes (RBP4, RPB8, SRBP). Additional RPTR modules plugged into the backplane will form a star network, allowing multiple segments to connect to the same point. Each repeater module consumes one unit load for the primary RS-485 network and one unit load for the repeated network.

A green power LED indicates that 12 VDC is present to the module. A red LED at each RS-485 network connector flashes when data is transmitted.

RS-485 Repeater Communication Kit

Overview

BAPI recommends fiber optic cable for HVAC communications networks that travel between buildings.

The FOX - Fiber Optic Transceiver converts the RS-485 data from the copper network to a fiber optic signal for transmission to other buildings. A FOX in the other building converts the fiber optic signal back into RS-485 for the remote copper network.

The FOX module accepts the multi-mode fiber (50/125um or 62.5/126um) cable on standard ST connectors. The copper RS-485 connection is made on the 8-pole plug along with the power and ground connections. The FOX also plugs into the communications repeater backplanes (RBP4, RBP8, SRBP). Each FOX module consumes one unit load on the RS-485 bus.

A green power LED indicates that 12 VDC is present to the module. A red LED at each fiber cable connection flashes when data is transmitted or received.

TB18 - Pluggable Terminal Block

ETA Line

H29

Overview

The TB18 - 18-Pole Pluggable Terminal Block is a small circuit board designed to simplify the task of wire termination. The TB18 is easier to apply and troubleshoot than a bunch of wires under a large wire nut or the typical barrier strip.

The TB18 board fits into the ETA line TRK Snaptrack or any other industry standard 2.75" snaptrack, and provides a straight through connection for nine pairs of wire on individual plugs.

Overview

The RBP - Communications Repeater Backplane fits into 2.75" snaptrack (TRK18) and provides power, communications and convenient mounting for the RPTR, FOX and SOX modules.

Connectors on the face of the RBP mate with connectors on the RPTR, FOX and SOX. The RPTR, FOX and SOX share data across the RBP backplane which provides transient protection for the communications network and power connection. Several RBP backplanes can be plugged together to share data and power through the backplane end connectors, allowing all the RPTR, FOX and SOX to form a large communications hub.

The RBP backplane receives 12 VDC power from a 3324VC voltage converter.

Specifications

Overview

The Repeater Backplane Power Bridge (RBP-PB) is used between Communication Repeater Backplanes (RBP4, RBP8) to bridge the power but break the RS-485 communications between the backplanes. The Power Bridge snaps into the same snaptrack as the Backplanes it bridges.

This allows simplified power wiring of a multi-protocol communications hub such as the BACnet and Modbus. The upper communications plug connects to the bus on the right; the lower plug connects to the bus on the left.

Overview

Many times you need to place only one communications repeater at a specific point in a communications network. A four-position Communications Repeater Backplane (RBP4) and its associated power supplies is clearly overkill. The BAPI SRBP - Single Repeater Back Plane teamed with a BAPI VC350 voltage converter (in Accessories section) and a FOX, SOX or RPTR module provides a convenient single repeater solution.

The SRBP fits into the standard 2.75" snaptrack. Pluggable connectors on the face of the SRBP allow quick and easy connections for power and RS-485 communications buses. One FOX, SOX or RPTR module plugs into a mating connector. Built-in surge suppression protects the network and power connections.

The SRBP receives 12VDC power from either a 3324VC or a BAPI VC350 voltage converter (shown in the Accessories section).

BELCON - Mating Pair Belimo® Connectors

ETA Line

H33

Overview

Many HVAC peripherals come with a short pigtail wire for connecting to the rest of your system. Running wire from your control panel to the peripheral and connecting them together is your headache. Most of the time it's twist the wires together and apply wire nuts. Later, when you need to disconnect the peripheral for troubleshooting, the inconvenient wire nuts get lost and the loose wires short out ruining the controller.

BAPI's BELCON connector pair allows a four-pole pluggable connection between your peripheral and the control wiring. You can quickly disconnect any peripheral without fear of wires shorting together or to any conductive surface.

TUCOM - Terminal Unit Comm. Block

Overview

The TUCOM and TUCOM2 are specific purpose connectors that add pluggable screw terminals for any zone or unitary controller having a 3P, 5mm or 5.08mm communication connection. Two options are available to fit in the tightest spaces.

The zone or other unitary controller only provides one communications plug, whereas you often need to terminate three cables on it. The TUCOM plugs into the controller's communications port and expands it into three pluggable screw terminals. Now you have one a separate plug for each segment in the network (comm in, comm out and zone sensor). Troubleshooting a communications problem becomes vastly easier.

The TUCOM and TUCOM2 will accept the COMSRG for surge protection in extreme environments.

Overview

The IRM4 - Interposing Relay Module has four independent channels that can be used for three typical interposing relay applications: Voltage In, Contact Out; Voltage In, Voltage Out; and Contact In, Contact out. The relay is energized by an external power source for the "Voltage In" options and from the IRM4 Module for the "Contact In" option. "Voltage Output" is always sourced via the backplane. Jumpers are used to set the mode for each individual channel and the wiring for each channel terminates via 4-pole 3.5mm connectors.

The unit is mounted in a BP2, BP4, BP8 or BP4-V Backplane with power provided by the Backplane. The Backplane is typically powered by a PS17/18/19RF Power Supply.

Each relay on the IRM4 Module has a 24VDC coil switching Form C contacts. A SPDT switch allows each output to be configured as NO/NC. LEDs provide power status of the unit as well as the state of each individual relay.

Overview

LRCA Module

The Link Router Communications Adapter (LRCA) replaces the 5-pole CCN plug on a Carrier® i-Vu Link/Router. It also provides an RJ jack for local laptop access and a BAPI standard comm plug for network termination. This will accept a COMSRG surge suppressor.

PSOCL Module

The Power Supply Output Current Limiter (PSOCL) is used to buffer the output of the BAPI PS17/18/19RF Power Supplies when used to power the Carrier® i-Vu Link/Router. BAPI recommends that only one Link/Router be powered from each PSCOL. Do not power any other load through the PSCOL.

Overview

The Universal Controller Relay Board (UCRB2) is used to interconnect a DDC controller's digital outputs to any device that requires a conventional thermostat input. The output plug has terminals for R, G, Y1, Y2, W1, W2.

There are five inputs that control five relays. The first relay's output (1/G) is an interlock for the other four, outputs 2, 3, 4 or 5 will not change state until output 1/G is on. In other words, heating/cooling will be disabled if the fan is turned off. The UCRB2 fits into 2.75" snaptrack and requires 1.4" of track.

Overview

The SS-AC Selector Switch/Alarm Counter will monitor up to 8 dry contacts and output one or two voltage or mA signals. The output signals are based on the highest-ranked contact when the module is in Selector Mode, or the number of closed contacts with the module is in Counter Mode.

Outputs are switch selectable as 0 to 10V, 2 to 10V, 0 to 20mA, or 4 to 20mA. Switch counter may be one output based on 8 contact inputs or 2 outputs (upper and lower) based on 4 contact inputs each. Selector mode is always 2 outputs based on 4 input contacts.

Overview

The SD2 is an ETA module that is used to indicate a program error code which may require a manual reset by a local maintenance technician or operator in the field. The module includes a manual reset switch that can be pressed to send a dry contact reset signal to a controller or other device.

The output of the reset switch can be set to Normally Open (NO) or Normally Closed (NC). The value of the signal from the controller is displayed on two 7-segment displays on the front edge of the module, scaled from 0 to 10 up to 0 to 50, depending on a jumper setting. It can accept a current input of either 0 to 20mA or 4 to 20mA or a voltage input of 0 to 10V or 2 to 10V depending on switch settings.

The unit is typically mounted in a BP2, BP4, BP8 or BP4-V Backplane with power provided by a PS17RF, PS18RF, PS19RF, or other DC supply. The green LED indicates that power is available to the module.

20x20x8 Steel Enclosure

H39

ETA Line

Overview

The BAPI 20208N1S is a NEMA 1, 14-gauge painted steel enclosure that weighs approximately 47 pounds. One field-installed divider provides a high voltage compartment in the enclosure to isolate a power supply.

Flipping the enclosure 180 degrees accommodates left and right hand door openings. Mount the enclosure by drilling holes in the back to fit your application. No knockouts are provided; drill and punch where you need conduit openings.

Each BAPI 20208N1S comes with a backplate and two Bracket Cable Guides (BCG).

Enclosure Backplates and Bracket Cable Guides

The appropriate size backplate(s) and two Bracket Cable Guides are included with each BAPI enclosure.

The Backplates are made of 12-gauge painted steel and pierced with a hole pattern that accommodates the various components which will be installed in the enclosure including snaptrack, panduit wire duct, bracket cable guides, transformers and DDC controllers.

More information on the Backplates and Bracket Cable Guides is found on page H41.

Overview

BAPI makes a NEMA 1 and NEMA 4X 14-gauge painted steel enclosure in the 44"x20"x8" size. The NEMA 1 model weighs approximately 90 pounds, while the NEMA 4X watertight model features a door seal with latches and weighs approximately 95 pounds.

Two permanent dividers provide a wireway for input and output conduit connections at the top of the enclosure and a high voltage compartment at the bottom of the enclosure for the power supply.

Flipping the enclosure 180 degrees accommodates left and right hand door openings. No knockouts are provided; drill and punch where you need conduit openings.

Each NEMA 1 and NEMA 4X models come with a Large Backplate (BP185X285), a Small Backplate (BP6X185) and two Bracket Cable Guides (BCG).

Temperature, Humidity & Pressure Sensor Overview

There are many facilities and locations today that rely on temperature, pressure and humidity sensors and transmitters to provide a stable, secure environment, such as hospitals, clean rooms and data centers. The sensor or transmitter itself can make or break the system, therefore they must be dependable, accurate and 100% compatible with the building control system. More demanding environments, advances in technology, and changing customer needs keep the industry striving for new and improved sensors and transmitters. As the industry continues to change, BAPI will be at the forefront providing high performance solutions for real world applications.

BAPI offers a wide range of temperature, humidity and pressure sensors and transmitters in all of our room, duct, immersion and outside air units so that they are 100% compatible with the facility's control system.

Temperature Sensors & Transmitters

THERMISTORS - pages I2 - I8

Thermistors are thermally sensitive resistors known for exhibiting a large change in resistance with only a small change in temperature. A thermistor's change in resistance is non-linear. It follows a pre-defined curve which is provided by the thermistor manufacturer.

RTDs - pages I9 - I12

RTDs (Resistance Temperature Detectors) are thermally sensitive resistive elements that exhibit a small change in resistance per degree of temperature change. RTDs are especially recognized for excellent linearity throughout their temperature range with a high degree of accuracy and repeatability.

TEMPERATURE TRANSMITTERS - pages I13 - I14

Temperature transmitters incorporate a 10K Ω thermistor or a 1K Ω platinum RTD and an amplifier. These devices provide an accurate and predictable 4 to 20mA output over a specified temperature range. They are specifically designed for temperature sensing and transmission over long distances without degradation of the 4 to 20mA signal.

Humidity Transmitters & Pressure Sensors

HUMIDITY TRANSMITTERS - pages I15 - I16

Humidity transmitters provide a high accuracy 4 to 20mA, 0 to 5V or 0 to 10V humidity measurement. Accuracies of 2% or 3% Relative Humidity (RH) are available. BAPI room units are protected by a molded housing with an integral filter, while duct and outside air units come with a removable 80 micron sintered stainless steel filter. The sensor is unaffected by volatile organic compounds (VOC's) or surface contamination.

PRESSURE SENSORS - pages I17

The heart of every BAPI Pressure Sensor is a micro-machined, single-crystal silicon, piezoresistive pressure sensor that changes resistance as a function of applied pressure. Each sensor is fabricated using the same integrated circuit technology used to make millions of cell phones, game machines and personal computers. Since silicon strain gauges have high output levels in relation to the pressure applied, the pressure levels in the BAPI diaphragm can be lower than in other non-silicon strain gauges. This means a more accurate measurement of lower pressure levels.

Thermistor Description

BAPI Thermistors are thermally sensitive resistors known for exhibiting a large change in resistance with only a small change in temperature. It is important to note that a thermistor's change in resistance is non-linear. It follows a pre-defined curve which is provided by the thermistor manufacturer. An example of a thermistor output curve can be seen in **Figure 1**.

Thermistors are manufactured to follow a specific curve with a high degree of accuracy. All BAPI thermistors have a standard accuracy of $\pm 0.2^\circ\text{C}$ throughout the commercial temperature range of 0 to 70°C . BAPI also has available a higher accuracy sensor for meeting tougher specs. The extra precision [XP] line has an initial accuracy of $\pm 0.1^\circ\text{C}$ throughout the commercial temperature range of 0 to 70°C . Please call for availability and pricing on [XP] line thermistors. Both accuracy levels allow BAPI thermistors to be interchanged without the extra expense of offsetting the controller.

* All Passive Thermistors 10K Ω and smaller are CE compliant.

Thermistor Specifications

DEFINITION OF SPECIFICATION TERMS

Interchangeability Tolerance (Accuracy):

The maximum amount that thermistors following the same curve will differ from each other.

Dissipation Constant:

The power needed to raise the thermistor's body temperature by 1°C . At the heart of all BAPI thermistor products is a sensor with a 2.7 mW/ $^\circ\text{C}$ dissipation constant to ensure that self-heating stays at an absolute minimum.

Stability (drift):

The amount that the resistance characteristics of a thermistor will change. BAPI uses only the highest quality, "pre-aged" thermistors with very small drift values. Over a ten year span, BAPI thermistors will not change more than 0.1°C .

Operating Range:

The operating range shown is for the thermistor only. The mounting package may further limit the operating range and is described on each mounting type specification. The thermal time constant will also be affected based on the added mass of the stainless steel probe and moisture protection encapsulation.

Thermal Time Constant

Bare sensors are typically measured and specified in still air and are timed at the statistical 63.2% of the step temperature change. A stirred liquid test will typically result in a much faster response time and is also timed at 63.2% of the step temperature change. The time constant is always the same whatever the temperature step change may be.

Thermistor Specifications

Interchangeability Tolerance (Accuracy):

Standard Sensor: $\pm 0.2^\circ\text{C}$ (0 to 70°C)

High Accuracy [XP] Sensor: $\pm 0.1^\circ\text{C}$ (0 to 70°C)

Dissipation Constant: 2.7 mW/ $^\circ\text{C}$

Stability (drift): Less than $0.02^\circ\text{C} / \text{year}$

Thermal Time Constant: 5 seconds (bead in still air) .5 seconds (stirred liquid)

Sensor Type	Reference Resistance	Operating Range

RTD Description

BAPI RTDs (Resistance Temperature Detectors) are thermally sensitive resistive elements that exhibit a small change in resistance per degree of temperature change. RTDs are especially recognized for excellent linearity throughout their temperature range with a high degree of accuracy and repeatability. An example of an RTD output curve can be seen in **Figure 2**.

RTDs supplied in BAPI products feature a standard interchangeability tolerance of $\pm 0.3^{\circ}\text{C}$ measured at 0°C . Higher accuracy sensors are also available. The Class A line [A] has an interchangeability tolerance of $\pm 0.15^{\circ}\text{C}$ measured at 0°C . Please call for availability and pricing on Class A RTDs. Whether standard or Class A, BAPI RTDs have such a high accuracy that they can be interchanged without the expense of offsetting the controller.

Most RTD sensing elements can be packaged to withstand an extremely broad temperature range (-200 to 600°C). For most purposes, the standard operating range should be sufficient, but we also have RTDs with a higher or lower operating temperature range. BAPI offers $1\text{K}\Omega$ Platinum RTDs with the ranges shown in the table at right.

Standard & Extreme Temperature Ranges for the $1\text{K}\Omega$ Platinum RTD

Range	$^{\circ}\text{C}$	$^{\circ}\text{F}$
Standard	-60 to 150	-76 to 302
Low Temp [1]	-200 to 0	-328 to 32
High Temp [2]	25 to 260	77 to 500
Very High Temp [3]	25 to 600	77 to 1,112

When ordering a sensor with an "extreme" temperature range, include the number in brackets [] after the sensor type. Ex: **BA1K[2]** is a $1\text{K}\Omega$ RTD with an operating range of 25 to 260°C .

RTD Specifications

Definition of Specification Terms

Tolerance of Resistance (Accuracy)

The maximum amount any RTD will differ from the standard resistance curve.

Stability (drift)

The amount that the resistance characteristics of a RTD will change over time under certain conditions.

Operating Range

The operating range shown is for the RTD sensor only. The mounting package may further limit the operating range and is described on each mounting type specification.

RTD Specifications

Tolerance of Resistance (Accuracy):

Single Point Standard: 0.12% at 0°C
 Single Point Class A: 0.06% at 0°C
 Averaging Standard: 0.2% at 0°C

Tolerance in $^{\circ}\text{C}$:

Single Point Standard: $\pm(0.3 + 0.005T)$; T = Temp in $^{\circ}\text{C}$
 Single Point Class A: $\pm(0.15 + 0.002T)$; T = Temp in $^{\circ}\text{C}$
 Averaging Standard: $\pm(0.5 + 0.005(T-25))$; T = Temp in $^{\circ}\text{C}$

Stability (drift):

0.14°C with 6,000 continuous hours at 400°C

Sensitivity:

$1\text{K}\Omega$: $3.85\Omega/^{\circ}\text{C}$ ($2.14\Omega/^{\circ}\text{F}$)

Self Heating (1K RTD only):

$0.4^{\circ}\text{C}/\text{mW}$ at 0°

Standardization:

DIN 43760-1980, IEC Pub 751-1983, JIS C1604-1989

Sensor Type	Reference Resistance	Temp. Coefficient	Operating Range
BA1K[375]	$1\text{K}\Omega$ @ 0°C	$3.75\Omega/^{\circ}\text{C}$	-60 to 150°C
BA1K[Ni]	$1\text{K}\Omega$ @ 21°C	$5.68\Omega/^{\circ}\text{C}$	-60 to 200°C
BA1K*	$1\text{K}\Omega$ @ 0°C	$3.85\Omega/^{\circ}\text{C}$	-60 to 150°C

*Available as an [A] high accuracy sensor.

Example: **BA1K[A]-I-2"** (high accuracy immersion sensor)

Temperature Transmitter Description

BAPI's temperature transmitters incorporate a 1K Ω RTD sensor and an amplifier. These devices provide an accurate two-wire, 4 to 20mA output over a specified range. They are specifically designed for temperature sensing and transmission over long distances without degradation of the 4 to 20mA signal. BAPI also offers outputs of 0 to 5, 0 to 10, 1 to 5 and 2 to 10 Volts. All outputs can be ordered as field selectable by choosing the TXS option on the ordering grid.

Each temperature transmitter is first calibrated with simulated RTD resistances for the specified range. Then an RTD is connected to the transmitter and the output is verified at one temperature.

BAPI has verified over 200 temperature ranges for the transmitters. If we don't offer the exact range you're looking for, call your BAPI representative to see if we can create a special range.

Additionally, BAPI can provide matched RTD-based units. Matched (sensor-transmitter pair) units utilize the tight tolerance of Class A RTDs to improve overall accuracy. The matched unit is tested in an environmental chamber against an NIST traceable reference thermometer. Each matched pair is provided with a "Certificate of Calibration" which lists the tested and calculated offset values, and identifies the equipment, products and people involved in the calibration process. The overall accuracy of the matched pair now becomes a function of the transmitter linearity, RTD linearity and reference thermometer uncertainty.

Matched errors are

$\pm((\text{Span} \times \text{Linearity Error}) + (\text{Reference Thermometer uncertainty}))$

Where Linearity Error = Square Root((Transmitter Linearity)² + (RTD Linearity)²) =

Square Root((0.125%)² + (0.2%)²) = 0.234%

Examples:

BA/T1K(-30 to 130F)

Span = 130 - (-30) = 160

Matched error = $\pm((160 \times 0.234\%) + (0.05^\circ\text{F})) = \pm 0.42^\circ\text{F}$

BA/T1K(45 to 95F)

Span = 95 - 45 = 50

Matched error = $\pm((50 \times 0.234\%) + (0.05^\circ\text{F})) = \pm 0.17^\circ\text{F}$

These accuracies are for the entire range of the sensor, although the accuracies in the midband of the sensor will be tighter than those near the endpoints of the specified range. Other matching and/or certification options may be available, please contact your BAPI representative for details.

BAPI temperature transmitters come in a ruggedized package for all configurations where moisture or condensation may be a problem. The potting material used to ruggedize the transmitters has high thermal conductivity to eliminate circuit overheating and low thermal expansion to minimize the stress on the circuit components. Due to the extremely low moisture absorption properties of the potting material, a ruggedized transmitter will remain operational even if temporarily immersed in water.

T1K Transmitter Specifications

Sensor: 1K Ω Platinum RTD

Supply Voltage: 12 to 40 VDC

Output: 4 to 20 mA, 0 to 5V, 1 to 5V, 0 to 10V, 2 to 10V

Max. Loop Resistance: 850 Ω at 24VDC

Span: Min 16.6°C (30°F), Max 555°C (1000°F)

Zero: Min -100°C (-148°F), Max 482°C (900°F)

Field Adjustments: Each transmitter is calibrated to the specified temperature range that is ordered and is not field adjustable.

System Accuracy: $\pm 0.065\%$ of Span

Linearity: $\pm(0.125 \times T - 20^\circ\text{C})/100$

Operational Humidity:

0 to 95%, non-condensing

Output Current limits:

Less than 1mA and 22.35 ± 0.15 mA

Power Output Shift:

$\pm 0.009\%$ of Span to 40VDC

Connections: Four 22-gauge etched Teflon leads or terminal blocks

Operating Temperature:

Transmitter: -20 to 70°C

Sensor: -65 to 105°C (standard)

-200 to 600°C (available)

Humidity Transmitter Description

BAPI humidity transmitters provide a high accuracy 4 to 20mA, 0 to 5V or 0 to 10V humidity measurement. Accuracies of 2% or 3% RH are available. Duct and outside air units come with a removeable sintered stainless steel filter. On duct and outside air units, the filter may be cleaned with warm, distilled water.

These units are microprocessor based and do not require any field calibration.

For all non-room configurations, BAPI humidity transmitters come standard in a ruggedized package. Ruggedized transmitters are suitable for locations where moisture or condensation may be a problem. The potting material used to ruggedize the transmitters has a high thermal conductivity to eliminate circuit overheating and a low thermal expansion to minimize the stress on the circuit components. Due to the extremely low moisture absorption properties of the epoxy, a ruggedized transmitter will remain operational even if temporarily immersed in water.

Many tests and studies have been conducted on the sensor incorporated into these humidity transmitters to assure that they provide long-term accuracy and durability. For applications requiring even higher

accuracy, however, certified units are available which have been tested and offset against an NIST traceable reference. Please call for details or with specific requirements.

General Specifications

Output Ranges:

4 to 20 mA, 0 to 5 V, or 0 to 10 V

Power:

10 to 35 VDC (0 to 5 VDC or 4 to 20 mA outputs)

15 to 35 VDC (0 to 10 VDC Output)

12 to 27 VAC (0 to 5 VDC Output)

15 to 27 VAC (0 to 10 VDC Output)

Power Consumption:

22 mA max. DC (0 to 5 VDC or 4 to 20 mA Outputs)

6 mA max. DC (0 to 10 VDC Output)

0.53 VA max. AC (0 to 5 VDC or 4 to 20 mA Outputs)

0.14 VA max. AC (0 to 10 VDC Output)

Sensing Element:

Capacitive type humidity sensor

Operating RH Range:

0 to 100 %RH (non-condensing)

Operating Temperature Range:

Room: 0 to 70°C (32 to 158°F)

Duct & Outside: -20 to 70°C (-4 to 158°F)

Accuracy Range: from 10 to 90% RH at 25°C

Response Time: 8 seconds in moving air for a 63% step

Drift: <0.5%RH per year

Pressure Sensor Description

The focal point of any sensor is the sensing element itself, and BAPI has gone to great lengths to produce one of the best sensors on the market today. The heart of every BAPI unit is a micro-machined, single-crystal silicon, pressure sensor. Each sensor is fabricated using the same integrated circuit technology used to make millions of cell phones, game machines and personal computers. To control and maintain the quality of these sensors, BAPI is involved in all phases of production from design to use.

Silicon does bring with it one undesired trait—thermal sensitivity. The traditional method of compensating for this thermal sensitivity is an external circuit with discreet resistors, some of which have their own temperature dependencies, introducing more error. BAPI uses a different, unique approach. We employ a custom compensation ASIC (Application Specific Integrated Circuit) that uses digital compensation while maintaining an analog signal path, producing a sensor that is precise and interchangeable. The result is a pressure sensor that offers the ultimate in high accuracy, while preserving the fast response and smooth output inherent to silicon sensors.

Because of the innovative sensor and digital temperature compensation circuit, we are able to produce a highly accurate and stable product. This accuracy is verified during final calibration at our factory using a pressure-controlled source accurate to 0.00015 inch of water and traceable to NIST standards.

Specifications

Output Ranges:

4 to 20 mA, 0 to 5 V or 0 to 10V

Power:

7 to 45 VDC (4-20 mA output)

7 to 45 VDC or 7 to 32 VAC (0-5 VDC output)

13 to 45 VDC or 13 to 32 VAC (0-10 VDC output)

Power Consumption:

4.9 mA max DC at 0-5 VDC or 0-10 VDC Output

0.12 VA max AC at 0-5 VDC or 0-10 VDC Output

20 mA max, DC only at 4-20 mA Output

Pressure Ranges

Inches W.C.

Low Range Unidirectional

0 to 0.10", 0 to 0.25", 0 to 0.50", 0 to 0.75", 0 to 1.00"

Low Range Bi-directional

±0.10", ±0.25", ±0.50", ±0.75", ±1.00"

Standard Range Unidirectional

0 to 1.00", 0 to 2.00", 0 to 2.50", 0 to 3.00", 0 to 5.00"

Standard Range Bi-directional

±1.00", ±2.00", ±2.50", ±3.00", ±5.00"

High Range Unidirectional

0 to 5", 0 to 10", 0 to 15", 0 to 25", 0 to 30"

Pascals

Low Range Unidirectional

0 to 30, 0 to 50, 0 to 100, 0 to 175, 0 to 250

Low Range Bi-directional

±30, ±50, ±100, ±175, ±250

Standard Range Unidirectional

0 to 250, 0 to 300, 0 to 500, 0 to 1,000, 0 to 1,250

Standard Range Bi-directional

±250, ±300, ±500, ±1,000, ±1,250

High Range Unidirectional

0 to 1,250, 0 to 2,500, 0 to 4,000, 0 to 6,000, 0 to 7,400

Accuracy at 72°F (22.2°C)

Low Range

±0.5% of W.C. ranges 0 to 0.1", 0 to 0.25", ±0.1" and ±0.25"

±0.5% of Pa ranges 0 to 30, 0 to 50, ±30 and ±50 Pa

±0.25% of range all other ranges

Standard and High Range

±0.25% of range

Temperature Limits

Storage: -40°F to 203°F (-40°C to 95°C)

Operational: 32°F to 140°F (0°C to 95°C)

Compensated: 50°F to 104°F (10°C to 40°C)

Operating RH Range:

0 to 95% non-condensing

Media:

Non-Ionic, Non-Corrosive, Clean, Dry Gasses

*Comm Jacks C11 and C22 are not available for No Display Units

ADDITIONAL DESCRIPTIONS

Comm Jack C35: 3.5mm Phono Style Jack with Leads Attached

Comm Jack C11: RJ11 (4 pin) Style Jack with Leads Attached

Comm Jack C22: RJ22 (4 pin) Style Jack with Leads Attached

5 Volt Power: Unit can operate on 5 VDC power (0 to 5V or resistive outputs only)

Test & Balance: Three-Position Switch - "Low" & "High" values vary, "Normal" is live sensor value

XLD Fan Speed: Pushbutton Fan Speed Adjustment [Off (5K), Auto (10K), Lo (15K), Med (20K), Hi (25K)] with LCD Indication

X01 Fan Speed: Pushbutton Fan Speed Adjustment [Off (4.89K), Auto (2.33K), Lo (10.63K), Med (13.24K), Hi (16.33K)] with LCD Indication

X02 Fan Speed: Pushbutton Fan Speed Adjustment [Off (2K), Auto (4K), Lo (6K), Med (8K), Hi (10K)] with LCD Indication

X06 Fan Speed: Pushbutton Fan Speed Adjustment [Off (6.5K), Lo (8.5K), Med (10.5K), Hi (12K)] with LCD Indication

HCF Fan Speed: Pushbutton Mode [Heat/Auto (5K), Off/Auto (10K), Cool/Auto (15K), Heat/On (20K), Off/On (25K), Cool/On (30K)] with LCD Indication

H01 Fan Speed: Pushbutton Mode [Heat/Auto (0Ω), Off/Auto (2K), Cool/Auto (4K), Heat/On (6K), Off/On (8K), Cool/On (10K)] with LCD Indication

Rev. 05/02/23

BAPI Non-Room Enclosure Styles

J5

BAPI Application Notes

BAPI offers six enclosure styles for our non-room sensors. These include the BAPI-Box Crossover, Junction Box, BAPI-Box, BAPI-Box 2, BAPI-Box 4 and the Weatherproof Enclosure ("Bell Box").

INDOOR ENCLOSURES

BAPI-Box Crossover

The BAPI-Box Crossover is made of UV-resistant polycarbonate and nylon and carries an IP10 rating. It is IP44 with a pierceable knockout plug installed in the open port.

IP10: Protected against solid foreign objects greater than 50mm diameter

IP44: Protected against solid foreign objects greater than 1mm diameter and protected against splashing water.

BAPI-Box Crossover

Junction Box

The Junction Box is made of galvanized steel with an IP20 and NEMA 1 rating.

IP20: Protected against solid objects greater than 12.5mm diameter.

NEMA 1: Constructed for indoor use to provide a degree of protection against falling dirt.

Junction
Box (JB)

BAPI-Box 4 Enclosure

The BAPI-Box 4 is made of nylon and plastic and carries an IP10 rating or IP44 with the Pierceable Knockout Plug installed. It is half the size of the BAPI-Box 2 with a hinged (but not gasketed) cover.

IP10: Protected against solid foreign objects greater than 50mm diameter

IP44: Protected against solid foreign objects greater than 1mm diameter and protected against splashing water.

BAPI-Box 4 (BB4)

INDOOR/OUTDOOR ENCLOSURES

BAPI-Box and BAPI-Box 2 Enclosures

The BAPI-Box and BAPI-Box 2 are made of polycarbonate and carry an IP66 and NEMA 4 rating.

IP66: Dust tight & protected against powerful water jets from any direction.

NEMA 4: Constructed for indoor or outdoor use to provide a degree protection against falling dirt, rain, sleet, snow, windblown dust, splashing water, hose-directed water; and that will be undamaged by the external formation of ice.

BAPI-Box
(BB)

BAPI-Box 2
(BB2)

Weatherproof Enclosure ("Bell Box")

The Weatherproof Enclosure is made of cast aluminum and carries an IP24 and NEMA 3R rating.

IP24: Protected against solid foreign objects greater than 12.5mm diameter, and protected against splashing water.

NEMA 3R: Constructed for indoor or outdoor use to provide a degree of protection against falling dirt, rain, sleet, snow; and that will be undamaged by the external formation of ice.

Note: The Weatherproof Enclosure is not watertight. If this enclosure will be subjected to driving rain, sprinkler systems or jets of water, then it may need a 3/16" weep hole drilled in the lowest horizontal face of the box.

Weatherproof (WP)

Note: For more information about NEMA and IEC enclosure ratings see BAPI's application notes [NEMA Enclosure Ratings](#) and [IEC Enclosure Ratings](#).

The IEC (International Electrotechnical Commission) is an international committee that develops and publishes its recommendations for standardizing international wiring devices and products. Ingress Protection (IP) is the grades of protection against external solids contacting the conductors of a wiring device and against the penetration of liquids into the wiring device.

The IP designation consists of the letters IP followed by two numerals. The first characteristic numeral indicates the degree of protection provided by the enclosure with respect to persons and solid foreign objects entering the enclosure. The second characteristic numeral indicates the degree of protection provided by the enclosure with respect to the harmful ingress of water. The degrees of protection are listed below:

1st IP# Degree of protection against access to hazardous parts and ingress of solid objects

- | | |
|----------|--|
| 0 | No protection |
| 1 | Protected against solid foreign objects greater than 50mm diameter |
| 2 | Protected against solid foreign objects greater than 12.5mm diameter |
| 3 | Protected against solid foreign objects greater than 2.5mm diameter |
| 4 | Protected against solid foreign objects greater than 1.0mm diameter |
| 5 | Dust Protected |
| 6 | Dust tight |

2nd IP# Degree of protection against the ingress of water

- | | |
|----------|---|
| 0 | No protection |
| 1 | Protected against vertically falling water drops |
| 2 | Protected against vertically falling water drops when enclosure titled up 15° |
| 3 | Protected against spraying water |
| 4 | Protected against splashing water |
| 5 | Protected against water jets |
| 6 | Protected against powerful jets from any direction |
| 7 | Protected against the effects of total water immersion up to 1M |
| 8 | Protected against the effects of total water immersion beyond 1M |

Therefore an IP66 rated enclosure is “dust tight and protected against powerful jets of water from any direction.”

If you have any questions about BAPI enclosures please call your BAPI representative.

Reference: IEC Publication 60529 - Classification of Degrees of Protection Provided by Enclosures

The **National Electrical Manufacturers Association (NEMA)** Standards Publication No. 250 defines 13 different enclosure “types” for non-hazardous locations. These NEMA types define the applications and the environmental conditions that enclosures are designed to protect against when properly installed.

Type 1: Enclosures constructed for indoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment, and to provide a degree of protection against falling dirt.

Type 2: Enclosures constructed for indoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment, to provide a degree of protection against falling dirt, and to provide a degree of protection against dripping and light splashing of liquids.

Type 3: Enclosures constructed for either indoor or outdoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment; to provide a degree of protection against falling dirt, rain, sleet, snow, and windblown dust; and that will be undamaged by the external formation of ice on the enclosure.

Type 3R: Enclosures constructed for either indoor or outdoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment; to provide a degree of protection against falling dirt, rain, sleet, snow; and that will be undamaged by the external formation of ice on the enclosure.

Type 3S: Enclosures constructed for either indoor or outdoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment; to provide a degree of protection against falling dirt, rain, sleet, snow, and windblown dust; and in which the external mechanism(s) remain operable when ice laden.

Type 4: Enclosures constructed for either indoor or outdoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment; to provide a degree of protection against falling dirt, rain, sleet, snow, windblown dust, splashing water, and hose-directed water; and that will be undamaged by the external formation of ice on the enclosure.

Type 4X: Enclosures constructed for either indoor or outdoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment; to provide a degree of protection against falling dirt, rain, sleet, snow, windblown dust, splashing water, hose-directed water; and corrosion; and that will be undamaged by the external formation of ice on the enclosure.

Type 5: Enclosures constructed for indoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment; to provide a degree of protection against falling dirt; against settling airborne dust, lint and fiber flyings; and to provide a degree of protection against dripping and light splashing of liquids.

Type 6: Enclosures constructed for either indoor or outdoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment; to provide a degree of protection against falling dirt; against hose directed water and the entry of water during occasional temporary submersion at a limited depth; and that will be undamaged by the external formation of ice on the enclosure.

Type 6P: Enclosures constructed for either indoor or outdoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment; to provide a degree of protection against falling dirt; against hose directed water and the entry of water during prolonged submersion at a limited depth; and that will be undamaged by the external formation of ice on the enclosure.

Type 12: Enclosures constructed (without knockouts) for indoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment; to provide a degree of protection against falling dirt; against circulating dust, lint and fiber flyings; and against dripping and light splashing of liquids.

Type 12K: Enclosures constructed (with knockouts) for indoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment; to provide a degree of protection against falling dirt; against circulating dust, lint, fiber flyings; and against dripping and light splashing of liquids.

Type 13: Enclosures constructed for indoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment; to provide a degree of protection against falling dirt; against circulating dust, lint and fiber flyings; and against spraying splashing, and seepage of water, oil and noncorrosive coolants. If you have any questions about BAPI enclosures or NEMA ratings, please call your BAPI representative.

Reference: NEMA Standard 250-1997, “Enclosures for Electrical Equipment (1000 Volts Maximum)”

All of BAPI's indoor sensor bodies and transmitter enclosures are made from UL94 V-0 rated plastics.

UL94 serves as a preliminary indication of a plastic's acceptability for use as part of a device or appliance with respect to its flammability. It is not intended to reflect the hazards of a material under actual fire conditions.

The UL94 HB test describes the Horizontal Burn method. Method UL94 V is used for Vertical Burn, a more stringent test than UL94 HB. The UL94 5V test is for enclosures for products that are not easily moved or are attached to a conduit system.

UL 94 Flammability Rating Summary	
5VA Surface Burn	Burning stops within 60 seconds after five applications of five seconds each of a flame (larger than that used in Vertical Burn testing) to a test bar. Test specimens MAY NOT have a burn-through (no hole). This is the highest (most flame retardant) UL94 rating.
5VB Surface Burn	Burning stops within 60 seconds after five applications of five seconds each of a flame (larger than that used in Vertical Burn testing) to a test bar. Test specimens MAY HAVE a burn-through (a hole).
V-0 Vertical Burn	Burning stops within 10 seconds after two applications of ten seconds each of a flame to a test bar. NO flaming drips are allowed.
V-1 Vertical Burn	Burning stops within 60 seconds after two applications of ten seconds each of a flame to a test bar. NO flaming drips are allowed.
V-2 Vertical Burn	Burning stops within 60 seconds after two applications of ten seconds each of a flame to a test bar. Flaming drips ARE allowed.
HB Horizontal Burn	Slow horizontal burning on a 3mm thick specimen with a burning rate is less than 3"/min or stops burning before the 5" mark. H-B rated materials are considered "self-extinguishing". This is the lowest (least flame retardant) UL94 rating.

If you have any questions about BAPI enclosures please call your BAPI representative.

Why Use DC Power Instead of AC Power on a Sensor?

Most modern HVAC control systems have 24 VAC available, and most of BAPI's products can run on 24 VAC, yet BAPI recommends powering them with DC voltage. Why?

Twisted wire cables have high wire-to-wire capacitance. Capacitors totally block DC voltage, but allow a little bit of AC voltages to couple from wire to wire. A portion of the 50 Hz or 60 Hz, 24 VAC running through one pair of wires in a multi-wire cable will combine with the normal signals on all the other wires in the cable. The Laws of physics mandate that this will happen no matter whose sensor is used.

The AC noise coupled into a sensor signal in a multi-wire cable may cause the controller to think that the measured parameter is changing back and forth rapidly. The controller may drive the mechanical equipment into an oscillation that overdrives the actuators and causes the mechanical equipment to wear out prematurely. For example, in a room at 72°F, BAPI's tests show that for a nominal 25-foot sensor wire length, the 60Hz noise in a multi-wire cable can change a 10K thermistor's temperature measurement from 69.4°F to 74.7°F. The controller thinks that the zone temperature is fluctuating by 5°F and drives the output actuators more than necessary.

There are two ways to avoid this situation. The first way is to convert the AC power to DC power with a voltage converter (such as BAPI's VC350A or VC350A-EZ) at the controller end of the cable. If you power the sensor with DC voltage, then there is no AC noise within the multi-wire cable to influence the temperature reading. But remember, the DC converter has to be mounted at the controller end of the wire, not at the sensor end, otherwise there will still be AC power within the multi-wire cable.

If you choose to power the sensor with 24 VAC, then the second way to avoid the AC noise is to run the AC power in a separate, shielded cable with the shield connected to a good building ground at the controller end. In this situation, the capacitance from the 24 VAC wires to the sensor's signal wires is so low it is effectively ZERO. No AC voltage combines with your sensor's signal, but you must run two separate cables.

Either of these methods will prevent the AC noise from influencing the sensor's signal, but BAPI recommends converting the AC power to DC power because we feel it is easier and more economical to install a low cost voltage converter rather than making two cable runs.

If you need further information about this topic, request the application note [Understanding Noise from AC Power](#) from your BAPI representative or download it from our website at bapihvac.com.

Recently BAPI changed its certification form to match the requirements of the National Institute of Standards and Technology data reporting standard.

CERTIFICATE OF CALIBRATION

Customer	Your Company Name	Order #	Your Order #	CalDate	2/17/2006
Serial #	BCC146	BA/T1KM[-40 TO 120F]-O-WP		CalDue	5/18/2006
Certificate #	BCEC1226	Cal. Procedure	T1KCalibration.pdf	Calibrated By	Tim VanBlarcom

The first section (shown above) indicates the product being certified, the customer and the order number.

Environmental Conditions		
Humidity %RH	38	Temperature °F
		71.6
Pressure	1016	Pascals

The second section (shown above) records the relative humidity, temperature and atmospheric pressure of the test laboratory.

Calibration Standards		
BAPI ID#	Description	Uncertainty
BAPI0016	SPRT	.02°C
BAPI0015	Digital Thermometer	.02°C
BAPI0116	Digital Multimeter	.001%

The third section (shown above) is an inventory of the equipment used to perform the certification. Uncertainty is the tolerance of the instrument's measurement as determined during its last calibration at a NIST certified calibration center.

Results							
Test	Units	Reference	Uncertainty	As Found	Difference	As Left	Difference
00.0	°F	-0.2	.04°C	00.0	.2	-0.2	0
40.0	°F	40.0	.04°C	40.3	.3	40.1	.1
80.0	°F	80.6	.04°C	80.8	.2	80.6	0
Notes							

The fourth section (shown above) details the certification results. The column labeled Test defines the test procedure or procedures that were used to certify the product. The column labeled Units defines the units of measure used for the test. The three test conditions for this certification were 0°F, 40°F and 80°F.

The column labeled Reference is the actual test condition as measured by the Calibration Standards referenced in the inventory described above. For the test shown, the test condition at 0°F was actually -0.2°F, we achieved 40°F and 80°F was actually 80.6°F. The next column labeled Uncertainty is the tolerance of Calibration standards used to measure the test condition temperature.

The column labeled As Found is the transmitters output before any corrections are made to the transmitter. If the output is a 4 to 20mA current loop, the output is changed to the units of the parameter being measured, in this case Fahrenheit temperature. The next column labeled Difference is the difference or offset of the As Found to the Reference.

The column labeled As Left is the transmitters output after any corrections are made to the transmitter. This is how the equipment is sent to you. If the output is a 4 to 20mA current loop, the output is changed to the units of the parameter being measured, in this case Fahrenheit temperature. The next column labeled Difference is the difference or offset of the As Left to the Reference. This last Difference column is the offset you should use in your controller to correct the temperature.

This notification serves to certify that the unit described above has been inspected and tested in accordance with specifications published by Building Automation Products Inc.

The accuracy and calibration of this instrument are traceable through reference standards that are compared, at planned intervals, to national standards maintained by the National Institute of Standards and Technology (NIST), by comparison to natural physical constants.

The measurement standards which support this calibration are calibrated on a schedule to maintain the required accuracy level.

For recalibration and recertification of this unit or for other testing or calibration services contact:

**Building Automation Products, Inc.
750 North Royal Avenue
Gays Mills, WI 54631**

**Phone (608) 735-4800
Fax (608) 735-4804**

The last section (shown above) notifies you that all instruments used to certify the equipment are properly calibrated and traceable to NIST.

Additional information on specific Temperature, Pressure and Humidity Certification documents is found on the following three pages.

If you have any questions about the certification documents, please contact your BAPI representative.

Shown below is an NIST Traceable Certificate of Calibration for a recent T1K order.

Each transmitter is calibrated for its range using precision resistors. A Class A RTD is given a unique serial number and attached to the transmitter. The RTD is subjected to each temperature certification point and the temperature transmitter's output is recorded at each point. BAPI normally tests at 25%, 50% and 75% of temperature span. BAPI will test at any temperature that you specify. BAPI can generate and certify temperatures between -45°C and 150°C.

If you require the temperature transmitter to be certified at more than the three standard temperatures, please contact your BAPI representative for pricing. If you have any questions about the certification document, please contact your BAPI representative.

BAPI measures and records the output of every ZPS pressure transmitter at several points before we send them to our customers. For calibration, BAPI has a digital pressure controller that produces pressures accurate to ± 0.0011 inches of water. When a customer requests an NIST Traceable Certificate of Calibration, the data for that specific sensor is collected from our calibration database. Because the data is kept in our calibration database, customers may request certifications at any time. Please provide the transmitter serial number for ease of retrieval. The figure below is actual data from an order. If you have any questions about the certification documents, please contact your BAPI representative.

BAPI's standard product accuracy for Duct and Outside Air Humidity units is either $\pm 2.0\%$ or $\pm 3.0\%$ relative humidity. BAPI can provide a NIST Traceable Certificate of Calibration for each transmitter assembly as shown in the figure below. Each certified sensor/ transmitter pair has a unique certification and BAPI retains certification data for future reference.

Each sensor is placed into a precision humidity chamber that can hold a relative humidity condition to within $\pm 0.5\%RH$. The humidity transmitter's output is recorded at each humidity certification point. BAPI normally tests at 25%, 50% and 75% relative humidity at 23°C (73°F). BAPI's humidity chamber has temperature test limits of 10 to 60°C (50 to 140°F) and humidity test limits of 15%RH to 85%RH. BAPI will test at any relative humidity and temperature that you specify within the humidity chambers capability.

If you require the humidity reading to be certified at more than one temperature, please contact your BAPI representative for pricing. Please allow additional lead time when ordering certified units. If you have any questions about the certification documents, please contact your BAPI representative.

Humidity Transmitter Certification (Room Units)

Rev. 06/11/19

BAPI Application Notes

J15

BAPI's standard product accuracy for Humidity Room Sensors is $\pm 2.0\%$. BAPI can provide a NIST Traceable Certificate of Calibration for each sensor assembly as shown in the figure below. Each certified sensor has a unique certification and BAPI retains certification data for future reference.

Each sensor is placed into a precision humidity chamber that can hold a relative humidity condition to within $\pm 0.5\%RH$. The humidity sensors output is recorded at each humidity certification point. BAPI normally tests at 25%, 50% and 75% relative humidity at 25°C (77°F). BAPI's humidity chamber has temperature test limits of 10 to 60°C (50 to 140°F) and humidity test limits of 15%RH to 85%RH. BAPI will test at any relative humidity and temperature that you specify within the sensors operating range and humidity chambers capability.

If you require the humidity reading to be certified at more than one temperature, please contact your BAPI representative for pricing. Please allow additional lead time when ordering certified units. If you have any questions about the certification documents, please contact your BAPI representative.

24 VAC

If you were to connect an oscilloscope to the output of a 24 VAC transformer, you would see the waveform below.

The voltage starts at zero, climbs to a peak, returns to zero, falls to a negative peak and returns to zero; sixty times a second for 60Hz and 50 times a second for 50Hz.

HALF-WAVE POWER SUPPLY

Half-wave power supplies only take power from the AC line during the positive half of the AC waveform. Most controllers use half-wave power supplies.

BAPI's VC350A EZ and VC350A are half-wave power supplies. Half-wave power supplies may be powered from the same transformer that powers the controller if the controller has a half-wave power supply and the capacity of the transformer is not exceeded.

Transformers used in half-wave power supplies have one of their output leads connected to ground. When powering multiple half-wave power supplies from one transformer, be sure to check for proper transformer connections.

Since only half of the incoming AC is used, half-wave power supplies in 24 VAC systems can only source approximately 1.5 amps of DC maximum.

FULL-WAVE POWER SUPPLY

Full-wave power supplies take power during both halves of the AC waveform.

BAPI's PS17 and PS17CB are full-wave power supplies. The VC2700-STM and VC3000 are available as full-wave or half-wave (specified at time of order).

Transformers used in full-wave power supplies cannot have either of their output leads connected to ground. DO NOT try to power half-wave power supplies and full-wave power supplies from the same transformer. If you do, you will short out the transformer.

Half-wave and full-wave power supplies can coexist in the same control system but they must be powered by separate transformers.

Since both halves of the incoming AC are used, full-wave power supplies in 24 VAC systems can source approximately 3 amps of DC maximum.

If you need more information, please call your BAPI representative and ask for Application Note Understanding Full or Half Wave Power Supplies or find it online at www.bapihvac.com.

Building Automation Products, Inc. (BAPI), a leading manufacturer of HVAC/R control system sensors and peripherals, is committed to environmentally responsible manufacturing practices. BAPI has been working since early 2005 to remove environmentally harmful materials from our products and we support the European Union's RoHS directive, which restricts the use of certain hazardous substances, such as lead and mercury, in electrical and electronic equipment.

Even though many manufacturers of HVAC/R monitoring and control equipment are claiming exemption from RoHS compliance, BAPI is developing its new products and revising current products to comply with the RoHS directive.

As of June 29, 2021, BAPI certifies that, to the best of our knowledge, product lines including Temperature, Humidity, Pressure, Air Quality, Wireless, ETA, and Accessories are compliant to the following EU Directives:

- RoHS 3 (EU Directive 2015/863) Restriction of the use of certain Hazardous Substances in electrical and electronic equipment;
- WEEE, Waste Electrical and Electronic Equipment, Directive 2002/96/EC

European Union's RoHS Directive

RoHS is the shorthand for the European Union's legislation, Reduction of Hazardous Substances in Electronics Manufacturing. The RoHS directive places restrictions on the use of six hazardous substances in electrical and electronic equipment. These substances are lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls, and polybrominated diphenyl ethers.

The intent of RoHS is to reduce the amount of these hazardous substances which enter the waste stream where they can impact soils and groundwater. In general, the RoHS directive is aimed at consumer-level finished electronic products that have relatively short life spans and enter the waste stream at high rates. The directive does not target electrical and electronic equipment that is permanently mounted in a fixed installation inside a building, such as HVAC/R control system equipment. Such items have very long lives and are not disposed of in quantities that significantly impact the concentration of hazardous substances in the community waste stream. Therefore, many manufacturers of such equipment have claimed exemption from the RoHS directive. BAPI, however, has chosen to comply with the RoHS directive because of our commitment to environmentally responsible manufacturing practices.

Below is a list of Pressure Sensor Terms and their definitions:

1. **Burst pressure**
Maximum pressure that may be applied to the sensor without rupture. No physical damage is allowed to the sensor, but it may need factory recalibration as it may strain the sensors internal mounting. BAPI's ZPS burst pressure is 10psi. To date, no ZPS unit has required factory recalibration when subjected to these pressures.
2. **Proof pressure**
Maximum pressure that may be applied without changing the transducer performance beyond specified tolerances. BAPI's ZPS proof pressure is 5psi.
3. **Bidirectional**
Takes the specified range and turns it into plus or minus of that range. The output signal is at the center of the range at zero pressure. The procedure used to turn the ZPS into a bidirectional unit is in the ZPS Installation and Operation document 13086_ins_zps_display.pdf available through your friendly BAPI representative.
4. **Auto Zero**
Field calibration of the zero pressure output. The procedure used to auto zero the ZPS is in the ZPS Installation and Operation document 13086_ins_zps_display.pdf available through your friendly BAPI representative.
5. **Range**
Specified endpoint pressures
6. **Span**
Arithmetic difference between two pressure endpoints
7. **Sensitivity**
Ratio of output signal change to a corresponding input pressure change
8. **Pressure**
Force per unit area
9. **Velocity**
Displacement per unit time
10. **Absolute Pressure**
Pressure measured relative to a perfect vacuum
11. **Differential Pressure**
Pressure difference measured between two pressure sources
12. **Gauge Pressure**
Differential pressure between the local ambient pressure and another pressure source
13. **Static pressure**
Pressure on the walls of a vessel at right angle to any flow. Static pressure is usually measured with a static pressure probe. ZPS/ACC07 or ZPS/ACC08
14. **Velocity pressure**
Pressure caused by the momentum of moving air Velocity pressure is usually measured with a Pitot tube assembly. ZPS/ACC11 or ZPS/ACC12
15. **Total pressure**
Arithmetic sum of static pressure and velocity pressure. Total pressure is usually measured with a total pressure tube.

If you have any additional questions, please contact your BAPI representative.

Recommended wire lengths for various power loads

When an electric current flows through a wire there is a drop in voltage due to the resistance of the wire. The voltage drop is found from Ohm's Law: $E=IR$, or **Voltage Drop = Wire Resistance x Amps of Current**.

The wire length recommendations below represent a 10% voltage drop in a 24 VAC or VDC circuit for various wire gauges and maximum currents. The voltage drop is linear, therefore cutting the wire length in half would result in a 5% voltage drop rather than a 10% voltage drop. The currents in the two tables represent the various models of power supplies and voltage converters available from BAPI.

Wire length recommendations in Table 1 are based on a wire temperature of 70 °F. If the wire is run in a portion of the building where temperatures can increase to 140 °F, such as an unventilated attic, then decrease the recommended wire length by 5%, as shown in Table 2.

The minimum wire gauge is determined by the maximum worst-case load. When in doubt, use the next larger size wire. All wiring must comply with the National Electric Code (NEC) and local codes.

Table 1: Recommended wire lengths at 70 °F and below (10% maximum drop in voltage)

Wire gauge	Ω/1000 ft (305 M) @ 70°F	Distance @ 75 mA	Distance @ 100 mA	Distance @ 350 mA	Distance @ 1.5 Amp	Distance @ 3 Amps
22	16.8	1905 ft (581 M)	1429 ft (435 M)	408 ft (124 M)	95 ft (29 M)	48 ft (15 M)
20	10.5	3048 ft (929 M)	2286 ft (697 M)	653 ft (199 M)	152 ft (46 M)	76 ft (23 M)
18	6.6	4848 ft (1478 M)	3636 ft (1109 M)	1039 ft (317 M)	242 ft (74 M)	121 ft (37 M)
16	4.2	7619 ft (2322 M)	5714 ft (1742 M)	1633 ft (498 M)	381 ft (116 M)	190 ft (58 M)

Table 2: Recommended wire lengths above 70 °F (10% maximum drop in voltage)

Wire gauge	Ω/1000 ft (305 M) @ 70°F	Distance @ 75 mA	Distance @ 100 mA	Distance @ 350 mA	Distance @ 1.5 Amp	Distance @ 3 Amps
22	16.8	1810 ft (522 M)	1357 ft (414 M)	388 ft (118 M)	90 ft (27 M)	45 ft (14 M)
20	10.5	2895 ft (882 M)	2171 ft (662 M)	620 ft (189 M)	145 ft (44 M)	72 ft (22 M)
18	6.6	4606 ft (1404 M)	3455 ft (1053 M)	987 ft (301 M)	230 ft (70 M)	115 ft (35 M)
16	4.2	7238 ft (2206 M)	5429 ft (1655 M)	1551 ft (473 M)	362 ft (110 M)	181 ft (55 M)

If you have any additional questions, please contact your BAPI representative.

The physical placement of BAPI outdoor temperature and humidity sensors depends on its application.

If the outside air is being used for economizing, the sensor should be placed close to the economizer damper without being in the air draft. If the economizer damper is on the roof, the sensor should be on the roof. If the economizer damper comes through the building wall, the sensor should be on the wall. If you want meteorological data, showing building occupants the outdoor weather conditions, mount the sensor on the side of building.

Place the sensor in a location where it does not receive direct sunlight because this can cause solar heat gain and affect readings. BAPI's tests show that readings can be affected by as much as 30% from solar heat gain. In far northern or southern latitudes, be aware that at sunrise or sunset the sun can illuminate all sides of a building.

The BAPI Weather Shade effectively reduces the solar heat gain, improving the accuracy of outdoor sensors. The shape of the cone and spacing from the wall creates a chimney which draws radiant heat from solar gain away from the sensor. The "domed" top also prevents bird nesting while the smooth surface minimizes hosting of insects. On humidity sensors, the Weather Shade also protects the probe filter from precipitation and grit, extending the life of the filter.

When mounting the sensor, drill the mounting holes as shown in the sensor's installation instructions. The best practice is to mount the unit with the sensor probes pointing down at a minimum of four feet above the ground or roof. Four feet isolates the sensor from any water puddles that would cause erroneous readings.

Water is the enemy of building materials and electrical connections. Carefully seal everything to get a good watertight seal. Be sure to seal the box plugs, conduit and conduit fittings.

Attach the sensor with the mounting hardware provided. **DO NOT** drill through the back of weatherproof boxes. Holes destroy the integrity of the box and may void the warranty.

Route the wires into the box and terminate with sealant filled connectors. BAPI's sealant filled connectors prevent water from attacking the connection, thereby preventing costly callbacks. The best practice is to seal the wiring hole after the wires are installed.

If you need any help mounting BAPI products or have any additional questions, please call your BAPI representative.

When thermowells are too big to fit into small pipes, you can still measure water temperature by strapping a small, wired temperature probe to the pipe. BAPI recommends using the remote probe with FEP jacketed cable because of its moisture resistance and because of the higher temperatures encountered in this application.

There are two ways to mount the sensor to the pipe.

Figure 1 shows the probe strapped to the pipe with cable ties. Hose clamps may be used too.

Make sure the probe is securely touching the pipe before clipping the ends off the cable ties. Secure the sensor lead to the pipe for strain relief. Wrap insulation a minimum of 1/2 inch thick around the probe and 4 inches to either side of it. Polyester quilt batting, purchased at a craft store, makes a good insulation that won't make your skin itch. Preformed, molded rubber or fiberglass pipe insulation works well too. Spray foam insulation is another alternative. Any standard insulation material may be used. If necessary, protect the insulation with an over-wrap of tape.

Using BAPI's Foamback Insulator (as shown in Figure 2 below) is another easy way to mount and insulate the probe. The Foamback Insulator is made from medical grade, closed cell foam, insuring that the probe is reading the pipe temperature, not the room temperature.

Clean and dry the pipe. Peel off the protective cover from the foamback's adhesive side and stick the probe to the adhesive. Stick the foamback/probe assembly to the pipe. Add cable ties or hose clamps to ensure that the sensor always stays attached to the pipe, avoiding costly callbacks.

Figure 1: Remote probe with FEP jacketed cable strapped directly to pipe.

Figure 2: Remote probe with FEP jacketed cable applied beneath a FOAMBACK insulator.

Note: 1.25 inch diameter pipe shown, this technique may be used for any diameter pipe.

Building Automation Products, Inc. (BAPI) sells its products under the following terms and conditions. Any different or additional terms must be specifically agreed to in writing prior to any sale.

Ordering

To place an order, contact an authorized BAPI distributor or contact BAPI directly by phone or email. You can also order products from our website/webstore at www.bapihvac.com. There is no minimum order amount.

Please be sure the purchase order contains the following information:

- Purchase Order number
- Bill and Ship to address
- Customer name, contact person & telephone number
- Quantity & unit price
- Part number
- Desired ship date
- Desired ship method*

*Available selection of carrier is dependent on shipping location and stated service preference.

Upon receipt of your order, BAPI will email a confirmation of the order, including current pricing, estimated ship date and assigned Order Number. Please refer to this order number in further communications regarding this order. The confirmation will be emailed to the predetermined contact specified when the customer account was created.

INTERNATIONAL ORDERS

International shipments may be subject to additional handling, export documentation and shipping charges, as well as any appropriate duties, taxes or fees. If you deal through a Customs Broker, please provide BAPI with the Broker's name, address, telephone number and a copy of their import documents so we may process your order as quickly as possible. Terms of payment are prepaid in US dollars by Electronic Funds Transfer to our bank or your bank check in US dollars unless an "Open Account" has been established. See Payment Terms in this section for more information.

DELIVERY

Promises of delivery from stock are subject to prior sale. Delivery dates are not guaranteed, but are estimated on the basis of BAPI's immediate receipt of all needed information supplied by the customer. We will, in good faith, attempt to meet estimated delivery dates, but BAPI does not accept responsibility for delays resulting from circumstances beyond our reasonable control.

BACK ORDERS

BAPI ships complete orders whenever possible to keep freight charges to a minimum. In the event that an order cannot be completely filled as scheduled, BAPI will contact the customer with information regarding the delay and advise a new ship date whenever possible. At that time a customer may elect to accept a partial shipment. Back orders will be shipped as soon as possible.

FREIGHT

Customer is responsible for all shipping charges billed on each invoice. Any discrepancies in shipments must be brought to the attention of our Sales Department within ten (10) working days of receipt of shipment. Deductions from remittances will not be allowed unless authorized by BAPI in writing. Please notify BAPI of Goods Damaged in Transit within 5 business days of receipt. Also, take photos upon receipt for proper case documentation. DO NOT return the

shipment to BAPI.

PARCEL INSURANCE

All packages ship FOB ORIGIN from BAPI. Insurance can be added to any package at the buyers expense. Insurance will need to be denoted on the purchase order in order to be added. All charges will be billed at BAPI's negotiated rate and added to the final invoice for payment.

Domestic Shipping Terms & Conditions

BAPI offers ground and expedited shipping options on orders being shipped within the contiguous United States as well as orders to Hawaii, Alaska, Guam and Puerto Rico. We ship at a discounted shipping rate that will be added to the invoice. There will be a \$15 minimum for all orders. BAPI will not bill third party or bill the recipient on a customer's shipping account for domestic shipments. International customers shipping to a freight forwarder within the contiguous United States will qualify for BAPI's discounted shipping rate. Any required additional expedited costs will be added to the invoice. Customers may request a preference for one of BAPI's three preferred carriers: UPS, Fed Ex, or SpeedDee. Customers who provide invalid addresses will have additional charges added to their invoice. BAPI's shipping policy is subject to change without notice.

International Shipping Terms & Conditions

International shipping and expedited charges will be at a discounted International shipping rate. International customers whose product ships directly to their location may request to have shipping costs billed to their respective shipping account. International customers shipping to a freight forwarder within the contiguous United States will qualify for a discounted shipping rate.

Payment Terms**NEW ACCOUNTS**

Payment terms are prepaid unless an open account is established. A credit application must be submitted for open account consideration. (Please allow up to two weeks for credit approval.)

OPEN ACCOUNTS

Terms are Net 30 days for open accounts.

- To ensure proper credit to your account, the invoice number must appear on your check stub
- Accounts with balances beyond 60 days from the invoice date will be subject to credit hold until the account is brought within 45 days from the invoice date.

In the event that it becomes necessary for BAPI to take legal action to enforce the provisions of this agreement or to obtain redress for the breach of any provision hereof, the buyer shall pay the costs of such action, including reasonable attorney fees. All legal proceedings that arise in any way related to this agreement shall be conducted in a court of competent jurisdiction in Crawford County, Wisconsin.

Pricing

Price of goods sold is that in effect at the time of sale. Contact BAPI Sales for current pricing and discount information. All prices are subject to change without notice and exclude any taxes, shipping and handling charges. BAPI will be pleased to furnish written quotations by email or mail upon request. Quoted prices and conditions are valid until the expiration date on the formal written quote.

Returns

Only new and unused products are considered for credit. All returns must have a BAPI Return Material Authorization (RMA) number. Debit memos will not be accepted without written authorization and an RMA number. Returns resulting from errors by BAPI will not be subject to a restock fee. Any items specified as Non-Cancellable/Non-Returnable (NCNR) are not returnable for credit. Restock fees will be applied as follows:

- Stock items returned within 30 days from the original ship date will not be subject to a restock fee.
- Stock items returned 31 to 180 days from the ship date will be subject to a 25% restock fee.
- Non-stock items are subject to 20% restock fee if returned within 30 days from the original ship date.
- Non-stock items returned 31 to 180 days from shipment will be subject to a 25% restock fee.
- No items will be accepted for return after 180 days.

Warranty

BAPI warrants its products to be free from defects in materials and workmanship, subject to the following terms and conditions. Without charge, BAPI will repair or replace products found to be defective in materials or workmanship within the warranty period and also provide a product credit* to offset the incurred costs to repair or replace them with BAPI products; provided that:

- a. The product has not been subjected to abuse, neglect, accident, incorrect wiring, improper installation or servicing, or used in violation of instructions furnished by BAPI;
- b. The product has not been repaired or altered by anyone except BAPI or its authorized service agencies;
- c. The serial number or date code has not been removed, defaced, or otherwise changed;
- d. Examination discloses, in the judgment of BAPI, the defect in materials or workmanship which developed under normal installation, use and service;
- e. BAPI is notified in advance and the product is returned with a valid RMA number, transportation prepaid.

Unless otherwise specified or agreed to in writing signed by a BAPI officer, BAPI products shall be warranted for five years from the date of sale with clauses "a" through "e" above still applicable**. In addition, there is a lifetime limited warranty on all single point non-room temperature sensors and some room temperature sensors including: Wall Plates, Low Profile, Quantum Slim and the Quantum No Display sensors. Batteries are not covered under warranty.

BAPI will pay the freight for all units being returned to the customer where a defect was found. In the case that no defect was found with the units received, or the defect was determined to be caused by customer error or abuse, the customer will be responsible for the payment of the shipping charge to return the units. The customer will need to supply a FED-EX or UPS account number for shipping charges if units are to be returned. Purchase orders will not be accepted for return shipping. In cases where units are repairable but not covered under BAPI's warranty, customers may elect to have BAPI repair the unit.

The foregoing warranty is in lieu of all warranties, express, implied or statutory, including but not limited to, any implied warranty of merchantability for a particular purpose. BAPI's liability for

Continued on next page...

**Warranty continued...**

breach of warranty is limited to repair or replacement. If the goods cannot be replaced, warranty is limited to a refund of the purchase price. In no instance shall BAPI be liable for incidental or consequential damages arising from a breach of warranty or from the use or installation of its products. Under no circumstance does BAPI agree to provide a product credit to repair or replace our product without prior specific written authorization.

No representative or person is authorized to give any warranty other than as set out above or to assume for BAPI any other liability in connection with the sale of its products.

This warranty is limited to the original customer only. It cannot be transferred or assigned to third parties unless the intent to transfer to a third party is expressly indicated in a purchase order and/or warranty processing arrangements have been agreed upon in writing by BAPI.

***Product Credit**

BAPI Backed product credits beyond the repair or replacement of the failed product are issued in the form of a product credit only¹. Requests for BAPI Backed product credits must be submitted to BAPI in writing. Under no circumstance does BAPI agree to provide a product credit associated with the repair or replacement of our products without prior specific written authorization from a BAPI officer². BAPI reserves the right to refute or refuse BAPI Backed product credits that do not meet the specified terms and conditions. Please contact BAPI for further details and requirements.

¹Product credits may vary depending on product type and quantity.

²BAPI may refute or refuse product credit requests when it relates to a component vendor issue.

****Warranties**

Recommended product calibration intervals are excluded from the warranty period. Devices that are used frequently or in non-standard environments may require more frequent calibration than what is recommended by BAPI.

Blü-Test rechargeable battery life is excluded from the warranty period. The battery in the Blü-Test products are rated to be recharged 300 times before performance degrades. Batteries can be replaced via BAPI's Blü-Test refurbishment service.

Design and Specifications

BAPI reserves the right to make changes in the design, specifications, and/or support documentation of any product as technological advances or necessity requires without notification. Please contact BAPI for updated product information.

Information in our descriptive literature is based on product specifications that are current at the time of publication. Product specifications, designs and descriptive literature are subject to change as improvements are introduced. Although we announce changes as they occur, we cannot guarantee notification to every customer. BAPI warrants delivered product to conform to the most current specifications, designs and descriptive literature.

Custom Products

In many cases, BAPI products can be modified to meet your custom requirements. Additional charges and longer lead times may apply. Contact your salesperson for a quote on your special requirements.

NIST Traceable Certificates of Accuracy & Calibration

BAPI offers NIST Traceable Certificates of Accuracy & Calibration for its temperature, humidity and pressure products.

Part Number

Net Price

CERT-HUM-AMBIENT \$20.00

NIST Traceable Certification of Accuracy for Humidity at Ambient – Price includes one point.

CERT-HUM-SPEC \$50.00

NIST Traceable Certification of Calibration for Humidity at Specific Points (Customer Specified) – Price includes one, two or three humidity points at one temperature.

CERT-TEMP-AMBIENT \$20.00

NIST Traceable Certification of Accuracy for Temperature Sensor at Ambient – Price includes one point.

CERT-TEMP-SPEC \$50.00

NIST Traceable Certification of Calibration for Temperature Sensor at Specific Points (Customer Specified) – Price includes one, two or three points.

CERT-PRESS-SR No Additional Charge

NIST Traceable Certification of Accuracy for Pressure – All Standard Ranges verified at one point.

CERT-PRESS-SPECIFIC \$50.00

NIST Traceable Certification of Calibration for Pressure at Specific Points (Customer Specified) – Price includes one, two or three points.

CAL-420CO-AMBIENT \$50.00

Calibration of BAPI's Carbon Monoxide Sensor (BA/420CO) at ambient temperature.

All prices are **NET**. Multipliers do not apply to certificate pricing. For information on special requests and pricing on Certificates with more than three points, please call your BAPI Key Account Specialist.
